

NOVITUS

**Communication protocol for fiscal printers (on-line printers)
and pharmacy fiscal printers**

Current version 1.13

| | | |
|--|--|---|
| 1. | Preliminary information. | 7 |
| 1.1. | Control codes. | 7 |
| 1.2 | Syntax of the control sequences. | 9 |
| 2 | Error handling. | 10 |
| 3 | Controlling sequences. | 10 |
| 3.1. | Printers' data readout commands. | 10 |
| 3.1.1. | Setting errors' handling mode. | 10 |
| 3.1.2. | Demand for return the error code of the last command. | 11 |
| 3.1.3. | Demand of the sending back cash register information. | 12 |
| 3.1.4. | Sequence sending back the type and version of software (#v). | 18 |
| Or | 19 | |
| 3.1.5. | Sequence sending back information about the device. | 19 |
| 51 – | sending back producer options (via PC) | 19 |
| Warning ! It is possible to have both built-in and external display at the same time, in this case value 3 will be sent back | | |
| | 26 | |
| 3.1.6. | Sequence sending back information of communication port. | 27 |
| 3.1.7. | Sequence sending back information of processes logs. | 28 |
| 3.1.8. | Sequence sending back information of processes logs. | 28 |
| 3.1.9. | Demand of sending back the time set in the printer. | 29 |
| 3.1.10. | Readout of fiscal memory content. | 29 |
| 3.1.11. | Readout of the fiscal memory for devices with approval of 2009. | 32 |
| 3.1.12. | Readout of the configuration changes. | 35 |
| 0 – | standard record | 37 |
| 3.1.13. | Readout of information about protected memory. | 49 |
| 3.1.14. | Request of sending back the last daily report. | 50 |
| 3.1.15. | Readout information of dispatch from repository. | 51 |
| 3.1.16. | Information about connecting displays. | 52 |
| 3.1.17 | Read AES254 key for PFX certificate password encryption for NoviAPI server. | 52 |
| 3.1.18 | Readout information about interface. | 53 |
| | Response: <ESC>P5\$ifieth0<CR>1/D2<ESC>\ | 54 |
| 3.2. | Programming e-receipt settings. | 54 |
| If it is enabled and there is additional certificate programmed in device for e-receipt, the data will be encrypted using the public key in this certificate | | |
| | 55 | |
| 3.3. | Last e-receipt status. | 58 |
| 3.4. | E-receipt readout. | 59 |
| 3.5. | Read information from e-receipt base. | 60 |
| 3.6. | Programming parameters to generate e-receipt visualization. | 61 |
| 3.7. | Read parameters to generate e-receipt visualization. | 62 |
| 3.8. | Deleting rejected eDocuments from base. | 62 |
| 3.9. | Programming certificate of NoviAPI server. Błąd! Nie zdefiniowano zakładki. | |
| 3.10. | Programming HUB settings of MF e-receipts. | 62 |
| 3.11. | Data of daily report record (NOVITUS): | 63 |
| 3.12. | Record of RAM memory resetting: | 80 |
| 3.13. | Data of daily report's record (NOVITUS): | 80 |
| Data of daily report's record (NOVITUS): 82 | | |
| 3.14. | Printer programming commands. | Błąd! Nie zdefiniowano zakładki. |
| 3.14.1. | Setting the clock. | 63 |
| 3.14.2. | Change of tax (PTU) rate. | 64 |
| 3.14.3. | Automatic PTU rates change. | 66 |
| 12. Sale in the „non-active” rate is blocked (compare the sequence receipt line). In the daily report only amounts of sale in „active” rates are included. | | |
| | 67 | |
| 3.14.4. | Fiscalisation/approval. | 67 |
| 3.14.5. | Programming the header in devices online type. | 67 |
| 3.14.6. | Header readout in online devices. | 68 |
| 3.14.7. | Programming header in online devices (version 10 lines). | 69 |
| 3.14.8. | Certificate's programming | 70 |
| 3.14.9. | Sha256 certificate readout | 70 |
| 3.14.10. | Controlling the display/drawer. | 71 |
| 3.14.11. | Controlling the display in mode out off receipt. | 71 |
| 3.14.12. | Controlling the cutter and paper feeding in open document. | 72 |
| 3.14.13. | Choosing the method of charging the discount. | 73 |
| Received packet: 73 | | |

| | |
|---|------------|
| 3.14.14. Programming date of periodical review. | 73 |
| 3.14.15. Readout of periodical review date. | 74 |
| 3.14.16. Programming date of service blockade. | 75 |
| 3.14.17. Readout of service blockade date. | 75 |
| 3.14.18. Operating with graphic logo. | 76 |
| 3.14.19. Operating with graphic logo, version 2. | 77 |
| 3.14.20. Indexes list readout of programmed graphics. | 78 |
| 3.15. Receipts' printing orders. | 87 |
| 3.15.1. Beginning of transaction. | 87 |
| 3.15.2. Receipt line. | 88 |
| 3.16.1. Operating deposit in the receipt line. | 92 |
| 3.16.2. Taken deposit (for selling the package). | 93 |
| 3.16.3. Storno (reversal) of taken deposit. | 94 |
| 3.16.4. Given deposit (for return of the package). | 94 |
| 3.16.5. Storno (reversal) of given deposit. | 95 |
| 3.16.6. Cancelling transaction. | 95 |
| 3.16.7. Standard transaction approval. | 96 |
| 3.16.8. Approval of transaction with forms of payment (1). | 98 |
| 3.16.9. Different forms of payments managing. | 100 |
| 3.16.10. Approval of transaction with forms of payment (2). | 100 |
| 3.16.11. Discount / overhead during transaction. | 104 |
| 3.16.12. Discount / overhead for a group of goods in a given VAT rate. | 104 |
| 3.16.13. Discount / overhead to the sub-total receipt. | 105 |
| 3.17. Additional lines on the receipt after the fiscal logo. | 106 |
| - 42 characters for Bono Online, Deon Online, | 112 |
| 3.18. Orders of printing invoices. | 115 |
| 3.18.1. Packet of invoice beginning (\$h). | 115 |
| 3.19. Invoice's line (\$l). | 117 |
| 3.19.1. Finishing the invoice (\$e). | 117 |
| 3.19.2. Order of setting invoice options. (@c) | 118 |
| 3.19.3. Additional lines of invoice's footers. (\$z) | 120 |
| 3.20. Orders of cash register and cashier operating. | 120 |
| 3.20.1. Log-in the cashier. | 120 |
| 3.20.2. Readout of cashier status. | 121 |
| 3.20.3. Log-out the cashier. | 121 |
| 3.20.4. Payment to the cash. | 122 |
| Receipt number | 123 |
| Payer name | 123 |
| 3.20.5. Pay-out from the cash. | 123 |
| Receipt number | 123 |
| Payer name | 123 |
| 3.20.6. Inquiry about the possibility of selling goods. | 124 |
| 3.20.7. In advance payment. | 124 |
| 3.20.8. Information on the table of contents. | 125 |
| 3.20.9. ECR status. | 126 |
| 3.20.10. Printing the report of cash / shift. | 126 |
| 3.20.11. Printing the cash / shift report providing forms of payment (1). | 127 |
| 3.20.12. Printing the cash / shift report providing forms of payment (2). | 128 |
| 3.21. Orders of printing fiscal reports. | 131 |
| 3.21.1. Printing daily report. | 131 |
| 3.21.2. Printing periodical report. | 132 |
| 3.22. Orders of non-fiscal transactions. | 133 |
| 3.22.1. Return of the package. | 133 |
| 3.22.2. Receipt of sale. | 134 |
| 3.22.3. Transaction of accepting (return of goods). | 135 |
| 3.23. Additional non-fiscal printouts. | 136 |
| 3.23.1. Starting the printout. | 136 |
| 3.23.2. Printout line (\$w). | 138 |
| 3.23.3. Ending the printout. | 139 |
| 3.24. Specification of printouts. | 140 |
| 3.24.1. Printout No. 2 – Transactions put off | 140 |

| | |
|--|-----|
| 3.24.2. Printout No. 3 – Operator functions report. | 140 |
| 3.24.3. Printout No. 4 – Cashier’s report. | 140 |
| 3.24.4. Printout No. 5 – Report of means of payment. | 141 |
| 3.24.5. Printout No. 6 – Sale recorded in the cash register. | 142 |
| 3.24.6. Printout No. 7 – Receipt | 142 |
| 3.24.7. Printout No. 8 – Pre-payment. | 142 |
| 3.24.8. Printout No. 9 – Gift bond. | 142 |
| 3.24.9. Printout No. 10 – Credit note. | 142 |
| 3.24.10. Printout No. 11 – Credit note - return. | 143 |
| 3.24.11. Printout No. 12 – Discount coupon | 143 |
| 3.24.12. Printout No. 13 – Payment on delivery | 143 |
| 3.24.13. Printout No. 14 – Banking transfer | 143 |
| 3.24.14. Printout No. 15 – Gift bond | 143 |
| 3.24.15. Printout No. 16 – Discount for the employee. | 143 |
| 3.24.16. Printout No. 17 – Change in means of payment. | 144 |
| 3.24.17. Printout No. 18 – Cash register operations. | 144 |
| 3.24.18. Printout No. 19 – Errors of the cash register. | 144 |
| 3.24.19. Printout No. 20 – Price list. | 144 |
| 3.24.20. Printout No. 21 – Giving a gift voucher. | 144 |
| 3.24.21. Printout No. 22 – Confirmation of transaction. | 145 |
| 3.24.22. Printout No. 23 – Confirmation of supercharging. | 146 |
| 3.24.23. Printout No. 24 – Purchase of currencies. | 146 |
| 3.24.24. Printout No. 25 – Discount voucher. | 146 |
| 3.24.25. Printout No. 26 – Shift report. | 147 |
| 3.24.26. Printout No. 27 – Clearing the account. | 147 |
| 3.24.27. Printout No. 28 – Cash register / cashier report. | 147 |
| 3.24.28. Printout No. 29 – Pay in / Pay out. | 149 |
| 3.24.29. Printout No. 30 – States of counters. | 149 |
| 3.24.30. Printout No. 31 – Report of tanking. | 149 |
| 3.24.31. Printout No. 32 – Confirmation of payment by card. | 149 |
| 3.24.32. Printout No. 33 – Currency in the safe. | 150 |
| 3.24.33. Printout No. 34 – Report of fuel alarm. | 150 |
| 3.24.34. Printout No. 35 – Ticket to car wash. | 150 |
| 3.24.35. Printout No. 36 – Report of fuel state. | 150 |
| 3.24.36. Printout No. 37 – Report of fuel delivery. | 151 |
| 3.24.37. Printout No. 38 – Report of BP partner club change. | 151 |
| 3.24.38. Printout No. 39 – Gift confirmation. | 152 |
| 3.24.39. Printout No. 40 – Confirmation of giving away the gift. | 152 |
| 3.24.40. Printout No. 41 – Confirmation of paying by credit card. | 152 |
| 3.24.41. Printout No. 42 – Confirmation of GSM number re-charging | 153 |
| 3.24.42. Printout No. 43 – Confirmation of re-charging / re-charging cancellation / re-charging order | 153 |
| 3.24.43. Printout No 44 – Payment confirmation / payment cancellation | 153 |
| 3.24.44. Printout No 45 – Discount coupon | 154 |
| 3.24.45. Printout No 46 – Confirmation of transaction / pre-authorization / cancellation / authorization rejection | 154 |
| 3.24.46. Printout nr 47 – Transaction / pre-authorization / cancellation / declination confirmation | 155 |
| 3.24.47. Printout No. 100 – Electronic transaction. | 156 |
| 3.24.48. Printout No. 102 – Confirmation / Cancellation of telecode sale / prepaid. | 158 |
| 3.24.49. Printout No. 103 – Confirmation / Cancellation of the payment for the receipt. | 159 |
| 3.24.50. Printout No. 104 – Loyalty transaction. | 160 |
| 3.24.51. Printout No. 105 – Parameters of loyalty scheme / customer’s card. | 161 |
| 3.24.52. Printout No. 106 – Giving out the gift. | 161 |
| 3.24.53. Printout No. 107 – Report of notary fees. | 162 |
| 3.24.54. Printout No. 108 – Receipt of payment by card. | 162 |
| 3.24.55. Printout No. 109 – DCC Receipt | 163 |
| 3.24.56. Printout No. 110 – Opening / closing the drawer. | 164 |
| 3.24.57. Printout No. 111 – Payment for the receipt. | 164 |
| 3.24.58. Printout No. 112 – Discount coupon. | 165 |
| 3.24.59. Printout No. 120 – Granting points / Loyalty system / Giving away a gift / Ordering a gift / Giving away an ordered gift / Account balance "VITAY" program\ | 165 |

| | |
|--|-----|
| 3.24.60. Printout No. 121 - Program fleet / selling on card dkv / card open drive / card wog / card tank bank type 2 | 166 |
| 3.24.61. Printout No. 122 – Transmission report / daily settlement of payment transactions / transmission report online / transmission report vitay / courses dcc / flx diagnostics / flo diagnostics / vitay diagnostics / total report / report dcc / application parameters / daily report | 167 |
| 3.24.62. Printout No. 123 – Takings transfer, withdrawal from cash drawer | 168 |
| 3.24.63. Printout No. 170 – Return confirmation | 168 |
| 3.24.64. Printout No. 180 - Confirmation of issuing a gift card / a discount card / a special card / an occasional card / an article – complaint / Confirmation of receiving a gift card / a discount card / a special card / an occasional card / an article – complaint / Confirmation of exchanging a gift card / a discount card / a special card / an occasional card / an article exchanging | 168 |
| 3.24.65. Printout No. 190 - Woodsman | 169 |
| 3.24.66. Printout No. 195 - A*D*V*E*R*T*I*S*E*M*E*N*T | 170 |
| 3.24.67. Printout No. 200 – NON-FISCAL PRINTOUT | 170 |
| 4 Non-fiscal printouts. | 170 |
| 4.1. Non-fiscal printouts – special lines. | 170 |
| 4.2. QRCode/QR code operating. | 170 |
| 4.3. Sequences of animation operating (@A) | 171 |
| 4.4. Sequences of animation operating (@A) – readout of crc animation | 171 |
| 4.5. Sequences of animation operating (@A) – readout of animations list | 171 |
| 4.6. Sequences of animation operating (@A) – readout of active animation | 172 |
| 4.7. Programming packet of Playlist (@API) | 172 |
| (0) – It forces taking into account only field 25 – time of displaying an advertisement | 173 |
| 4.8. The rest of orders. | 175 |
| 4.8.1. Request about number of drawer openings (@dc). | 175 |
| 4.8.2. Outdraw of paper (#l). | 175 |
| 4.8.3. Outdraw of paper (#l) with cutting. | 176 |
| 4.8.4. Database control (#b). | 176 |
| 4.8.5. Menu displaying (\$m). | 177 |
| 4.9. Additional communication packets. | 177 |
| 4.9.1. Handling tunnelling the transmission of AUX1 and AUX2 ports PC1 and PC2 (^x). | 177 |
| 4.9.2. Handling the controlling of modem lines of transmission of AUX1- AUX2 ports by PC1 and PC2 ports (^m). | 178 |
| 4.9.3. Readout of periodical review date (^t). | 179 |
| 4.9.4. Readout of service blockade date (^t). | 179 |
| 4.9.5. Question about data from the last receipt (?l). | 180 |
| 4.9.6. Handling the data of logs of communication monitor (?m) | 187 |
| 4.9.7. Configuration settings (^c). | 188 |
| HDe – option not sent back | 191 |
| Warning: 213 | |
| ** option only to program | 213 |
| 4.9.8. Reading parameters from the specified range (^c) | 213 |
| 4.9.9. Programming a single option (^c) | 214 |
| 4.9.10 Setting the messages on PC2 (^e). | 214 |
| 4.9.11. Controlling PC2 application from the PC and receiving the status (^s). | 216 |
| 4.9.12. Controlling the status of PC2 application and receive of orders from PC to PC2 (^r). | 217 |
| Ports: PC2 | 217 |
| 4.9.13. Readout of the header printout (^u). | 218 |
| 4.9.14. Collecting information about amount of printed paper (@p). | 218 |
| 4.9.15. Printout packet stored after receipt (PC2). | 218 |
| 4.10. Packet of currency operating (approval 2009). | 219 |
| 4.10.1. Programming currency changing (^b). | 219 |
| 4.10.2. Programming of mode of printout re-calculating to currency in the receipt's footer (^b). | 220 |
| 4.10.3. Supporting forms of payment in currency (\$b). | 221 |
| 4.10.4. Request about server address. | 221 |
| 4.10.5. Servers' programming. | 222 |
| <u>Warning:</u> | 222 |
| 4.10.6 DNS addresses redout. | 222 |
| 4.10.7 Sequence sending back information about update status. | 222 |
| 4.10.8 Sequence of update controlling. | 223 |
| 4.10.9 Programming address of the MAC network card. | 224 |

| | | |
|---|-----|-----|
| 4.10.10. Programming NoviApi settings. | 224 | 224 |
| 4.10.11. Readout of NoviApi settings. | 224 | |
| 4.11. Packets concerning EFT terminal. It concerns Point fiscal printer and newer ones. | 226 | |
| Readout of ECREFT settings. | | 229 |
| 4.12.1. Request about USB setting configuration. | | 229 |
| 4.12.2. USB settings configuration. | | 230 |
| 4.12.3. Readout of network interfaces (for ONLINE devices). | | 230 |
| 4.13. Packets connected with protected memory. | | 231 |
| 4.13.1. Printout from protected memory. | | 231 |
| 4.13.2. Confirmation of service review. | | 232 |
| 4.13.3. Order to set confirmation of statutory service review. | | 232 |
| 4.13.4. Printout of records report in the fiscal memory by numbers range. | | 232 |
| 4.13.5. Printout of records report in the fiscal memory by dates range. | | 233 |
| 4.13.6. Last printout. | | 233 |
| 4.13.7. Printout of document data- JPK. | | 233 |
| 4.13.8. Readout of document data – JPK | | 234 |
| 4.13.9. Readout of document data – JPK by daily report number and receipt number. | | 235 |
| 4.13.10. Readout of protected memory data. | | 236 |
| 4.13.11. Readout of protected memory data – certificates (@PMK). | | 236 |
| 4.13.12. Stream readout of fiscal memory – data. | | 237 |
| 4.13.13. Stream readout of fiscal memory - headers. | | 238 |
| 4.13.14. Events readout. | | 238 |
| 4.13.15. Report of service reviews. | | 239 |
| 4.14. Orders for printers in pharmacy version. | 240 | |
| 4.14.2. Receipt line. | 242 | |
| 4.14.3. Acceptation / Cancellation of pharmacy receipt. | 242 | |
| 4.15. Drug valuation. | 244 | |
| 4.15.1. Deleting saved data of drug valuation ("cancellation of valuation"). | 245 | |
| 4.15.2. Deleting the whole remembered drug valuations list. | 245 | |
| 4.15.3. Cash report in format for drug store. | 246 | |
| 4.15.4. Prescription drug order. | 247 | |
| 4.15.5. Prescription valuation. | 248 | |
| 4.15.6. Prescription valuation according to protocol „NOVITUS accordable”. | 249 | |
| 5. Orders for printer in ticket machine version. | 251 | |
| 5.1. Discount programming. (1@R). | 251 | |
| 5.2. Programming discount groups (2@R). | 252 | |
| 5.3.1. Ticket receipt item (@L). | 252 | |
| 5.3.2. Ticket receipt item with chargé and discount (@L3) | 253 | |
| 5.3.3. Ticket receipt item – ticket with no surcharge (@L4). | 255 | |
| 5.4. Additional fee (with article description) (@L1) | 257 | |
| 5.4.1. Additional fee (with article code) (@L2) | 257 | |
| 5.4.2. Additional information to ticket receipt (@I). | 258 | |
| 5.4.3. Closing ticket item (0@L). | 259 | |
| 5.4.4. Ticket reports (#o). | 262 | |
| 5.5. Read information about discounts / discounts quota. | 263 | |
| 5.5.1. Readout of programmed discounts indexes (110#s). | 263 | |
| 5.5.2. Data readout of programmed discount groups (111#s). | 263 | |
| 5.5.3. Readout of discount data (112#s). | 264 | |
| 5.5.4. Readout of discount values for given daily report (113#s). | 265 | |
| 5.5.5. Reading control number from programmed discounts (117#s) | 266 | |
| 5.6. Reading information about amount of discounts of daily reports ranges (114#s, 115#s, 116#s). | 266 | |
| 6. Calculations conducted by the fiscal printer during printing the receipts. | 267 | |
| 7. Configuration of the printer's work – „Administration mode”. | 271 | |
| 2.1.1.1 After [s] | 271 | |
| 8. Alphabetic specification of commands realized by fiscal printers. | 273 | |
| 9. Description of interfaces. | 276 | |
| 9.1. Description of serial interface. | 276 | |
| 9.2. Connecting cable for protocol XON/XOFF and RTS/CTS. | 276 | |
| 9.3. Sequence of exits of plug RJ45 8/8 for linking external facilities. | 277 | |
| 9.4. Printer – active drawer connection. | 277 | |
| 10. Errors. | 278 | |

1. Preliminary information.

The Fiscal printer is a device purposed for cooperation with a PC computer. Its action consists in executing commands sent from the computer through a serial port RS-232. The printer recognizes control codes and executes the recognized commands. In case of error the printer informs the operator by an appropriate message shown on the LCD (liquid crystal display) or sends the information on the error to the computer.

In the main loop of the sequence analysis there are being recognized four control codes (four one-byte command codes sent to fiscal printers) and commands preset (characters <ESC> P).

In case when only some versions of the printers recognize the described codes or control sequences, it has been marked in the concerned text.

We propose to download a test/ service program for the fiscal printers to these programmers who adapt their applications to cooperate with the fiscal printers manufactured by **NOVITUS SA**.

<http://www.novitus.pl/pl/dla-programistow/drukarki-fiskalne/>

This program is located in a group „Service programs”.

This program ten enables one to send to the printer all control sequences which are accepted by the printers. To do it, one shall – after the program has been started – make use of the option Tools – Printer control. After sending a command to the printer, the control sequence can be seen by selecting operation Programming – Control sequence.

These Programmers who create applications acting under the Windows may make use of the controller ActiveX, also presented in the above mentioned page. The file containing the controller and documentation in English is in the group „Communications protocols and drivers purposed for fiscal devices” under name OIC_FPLib.zip. The controller, apart from exercising control on the fiscal printers, has also a possibility to control additional, external alphanumerical display. It is executed without the need of inscription any code – data to the display are sent on the basis of control commands of the fiscal printer.

The main principle assumed while works on new versions of the fiscal printers is to provide full compatibility „downwards”. The newer fiscal printers are compatible with their predecessors, and it is why they are fully handled by older versions of the protocol. Any potential departures from the rule of „downwards” compatibility can turn up as a result of implementing new fiscal regulations, which will not allow executing some of the hitherto existing commands.

1.1. Control codes.

ENQ (\$05) – status dispatch demand (^E),

In response to status dispatch demand (**ENQ**) printer sends 1 byte of the following format:

| | | | | | | | |
|---|---|---|---|-----|-----|-----|-----|
| 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| 0 | 1 | 1 | 0 | FSK | CMD | PAR | TRF |

where:

- FSK** 0: printer is in training mode,
1: printer is in fiscal mode,
- CMD** 1: the last command has been executed correctly (bit is deleted after receiving **ESC P**, if the command following **ESC P** is not a demand of sending back cash register information and is set after its correct execution),
- PAR** 1: printer is in transaction mode (after having completed the sequence start of transaction, before completing the sequence annulment of transaction, standard validation of transaction, validation of transaction with payment forms (1) or validation of transaction with payment forms (2)),

TRF 1: the last transaction has been finalized correctly (bit set after correct execution of the sequence standard validation of transaction , validation of transaction with payment forms (1) or validation of transaction with payment forms (2), and deleted after correct execution start of transaction).

NOTE:

1. Bit TRF is stored in a non-volatile memory, thus even there occurs supply failure between the moment of completing the transaction and status testing, the value of this bit, tested by application will remain correct (moreover, the work program of the printer provides that regardless of supply failure the operation of receipt printing, updating the totalizers and TRF settings are UNSEPARABLE!).
2. We would like to draw your attention that in case of receipt annulment both bits remain in state 0.
3. Possible status responses (ENQ) are within the range \$60..\$6F (range of small letters), which in turns always enables one to identify them (small letters cannot appear in status response while automatic error handling).
4. Order of sending status is on the fiscal printer interpreted synchronously (if in the given moment the printer is during executing earlier demanded activity, or it has no paper or in incorrect situations, the answer can come late or at all. In that case one should use DLE status).

BEL (\$07) – sound signal (^G),

CAN (\$18) – interruption of command interpretation (^X).

DLE (\$10) –status dispatch demand (^P)

Gives a possibility of status readout e.g. lack of paper or error situations.
In response to code DLE (\$10) printer sends one-byte status in format:

| | | | | | | | |
|---|---|---|---|---|-----|----|-----|
| 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| 0 | 1 | 1 | 1 | 0 | ONL | PE | ERR |

Where:

- ONL** 1: state „On-Line”,
- PE** 1: state „Lack of Paper” or discharged battery (24V),
- ERR** 1: state „Mechanism/ controller error”.

We would like to your attention that, this code gives messages from range: \$70..\$77, so other than the remaining status responses (response to ENQ included).

Attention:

1. Order of sending DLE status is on the printer interpreted asynchronously (in case of lack of paper or in incorrect situations).

DLE2 (\$1A) – asynchronous demand of sending back a widen status.

In response a widen printer status is sent back:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|---|---------------------|-----------|------|-----------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | @s | | 2 | |
| 3 | The last error code | Number | ; | | |
| 4 | Number of the last printout | Number | ; | | |
| 5 | Number of the last printout | Number | ; | | |
| 6 | No possibility of processing orders | Value Hex 00..FF | ; | 8 | Byte 1 Bit 8 |
| | Printer during executing a daily report | | | | Byte 1 Bit 7 |
| | Synchronous verification of copy e | | | | Byte 1 |

| | | | | | |
|---|---|---------------------|--|---|-----------------|
| | is in progress | | | | Bit 6 |
| | Printer waits for interaction with the user | | | | Byte 1 Bit 5 |
| | Printer in menu | | | | Byte 1 Bit 4 |
| | No paper | | | | Byte 1 Bit 3 |
| | Error of printing mechanism | | | | Byte 1 Bit 2 |
| | Open printer's cover | | | | Byte 1 Bit 1 |
| | The last order ended with error | Value Hex 00..FF | | | Byte 2 Bit 8 |
| | Printer during transaction mode | Value Hex 00..FF | | | Byte 3 Bit 8 |
| | Mode of additional lines on receipt | | | | Byte 3 Bit 7 |
| | During printing... | Value Hex 00..FF | | | Byte 4 Bit 8 |
| | Paper is ending ... | | | | Byte 4 Bit 7 |
| 7 | Control byte | 00..FF | | 2 | |
| 8 | | <ESC>\ | | 2 | |

1.2 Syntax of the control sequences.

Apart from control codes there are recognized format commands:

<ESC> P P1;...;Pn xxxx <text> cc <ESC>

where characters <ESC> P (\$1B \$50) mean beginning of a new command. Then, one-1byte parameters from P1 to Pn are sent, only if the command requires them to be given. After the parameters is command ('xxxx') of length from 2 to 4 characters. Many commands require giving additional parameters, like product's name, price, value in form of sequences inscriptions (parameter <text>). These sequences are given after sending the command code and may any ASCII characters, control codes excluded. Format of a text sequence depends on particular command and may contain texts and numerical parameters. In case of texts the limiter is character **CR** (\$0D), whereas in numerical values character **'** (\$2F). Numerical parameters which define the amount may consist of max. 8 digits for the integral part and max. 2 digits for the fraction part, separated with a point (decimal point). The zero fractional part and meaningless zeros in the integral part can be neglected, so the figure instead of sending the sequence '0000013.00' it is enough to send '13' (sequences '0013', '13.00', '13.' will be also correct, nevertheless their sending consumes more time).

At the very end of majority of commands there is sent a check sum 'cc', expressed in form of two hexadecimal figures. The check sum is calculated in the following form:

1. < check sum > = 255;

2. for each character of a sequence following the characters <ESC> P we calculate:

< check sum > = < check sum > **xor** <code of sequence character>

3. The check sum obtained in this way we present in text form on two bytes and append to the sequence together with characters <ESC> \.

Example:

The following sequence is used to increase cash state and print out non-fiscal pay-in receipt:

**<ESC> P 0 # and PAY-IN / < check sum > <ESC> **

Let's assume that we want to pay 100 PLN (zł) to the cash, thus the sequence will have the following form:

**ESC P 0 # i 100 / < check sum > <ESC> ** it means in hexadecimal notation:

\$1B \$50 \$30 \$23 \$45 \$31 \$30 \$30 \$2F < check sum > \$1B \$5C.

While calculating the check sum take part: the underlined figures and the initial value 255 (\$FF):

\$FF xor \$30 xor \$23 xor \$45 xor \$31 xor \$30 xor \$30 xor \$2F = \$9B

The obtained value \$9B we present on two bytes in form of character form '9' and 'B' (\$39 \$42).

So, the sequence sent to the computer shall assume the following form:

\$1B \$50 \$30 \$23 \$69 \$31 \$30 \$30 \$2F \$39 \$42 \$1B \$5C. If no mistake has been made, the printer will increase the counter responsible for state of cash and will print out a receipt which confirms execution of operation confirmation.

Printer starts execution of a command not before the moment of reading out an “ending” of a sequence, it means characters <ESC> \ (\$1B \$5C). If during analysis of the received sequence there occurs an error – then printer does not interpret the next part of the command up till the moment of receiving the “ending”. The same effect will have receiving a character <ESC> in the middle of a sequence. Finding characters <ESC> P results in starting-up sequence analysis from the very beginning. Appearing the code **CAN** (\$18) causes interruption of the analysis command and jumping into the main analysis loop.

Remarks:

1. Sequences: displayer/drawer controlling, demand for sending back cash register information, demand for sending back time sent In cash register, demand for sending back last command's error, sequence sending back the type and version of software do not require sending check digits 'cc'.
2. After receiving a sequence there may turn-up an error message. One shall note that command may not be recognized also on account of wrong mode of operation of the printer – e.g. while printing data base report the printer does not recognize other commands than those related with the concerned report. .
3. Receiving by the printer a command header: **<ESC>P** always causes suspension of the interpretation of the former command (provided it has not been executed yet). Return to interpretation of the control characters **<ENQ>**, **<DLE>** and **<BEL>** requires receiving by the printer a command terminator : **<ESC>**. For example, interpretation command displayer/drawer controlling ends (regardless of its variation) at the moment of receiving a terminator, although in some variants of this command the characters between its identifier (**\$d**) and terminator **<ESC>** will be simply ignored. Occurrence of syntax error or command execution always results in interpretation interruption and return to the main loop of syntax analysis (where codes **ENQ** and **BEL** are being detected).
4. Any data sent to the printer has got ASCII characters – printable (excluded e.g. codes **<ESC>**, **<ENQ>**, **<DLE>**, **<CR>** and the like, which are of special importance), the above concerns also any numerical data, which is to be converted into ASCII before dispatch (it is possible to compress the meaningless zeros).
5. If a parameter is ignored in control codes it means it may have any value, or may not appear, what in turn, respectively exert influence on the value of control byte **cc**.

2 Error handling.

As result of command sending to the printer there may turn up three types of errors:

- error of unrecognized command - printer received a preset command (characters <ESC> P) but did not recognized the command (incorrect 'xx').
- syntax command error - command is correct, nevertheless there is discrepancy in e.g. number of sent parameters or the check sum was faulty calculated. Such a command is ignored.
- command execution error - command has been constructed correctly, but due to some reasons it cannot be executed (Overflow of counters, calculation error or error caused by faulty operation of the printer hardware).

In any of the above mentioned cases, the printer will inform the User about an error with appropriate message on the LCD or sends information to the computer of an error after receiving a sequence for sending back cash register information (field- the last error). Possible values of this field contain specification of errors.

3 Controlling sequences.

3.1. Printers' data readout commands.

3.1.1. Setting errors' handling mode.

| No | Field name | Content | Separator | Size | Remarks |
|----|--------------|-----------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Service mode | 0..4 | | 1 | |
| 3 | Command | #e | | 2 | |
| 4 | Control byte | 00..FF | | 2 | |
| 5 | | <ESC>\ | | 2 | |

Where:

Operating mode

- 0: appearance of the error during realization of the sequence causes display of the message and stoppage of the processing until pressing the OK button,
- 1: appearance of the error brings no message and does not stop the processing. The kind of the error may be tested with the appliance of the demand for setting back cash register information sequence (the field: Last response error), or demand for setting back the code of last command's error sequence
- 2: appearance of the error during realization of the sequence causes display of the message and stoppage of the processing until pressing the OK button. The error code after conducting the Command is automatically sent to the interface,
- 3: appearance of the error brings no message and does not stop the processing. The error code after conducting the Command is automatically sent to the interface.
- 4: appearance of the error brings no message and does not stop the processing.

Error code is sent back only if the packet doesn't have its own response.

Error code after conducting the command is automatically sent to the interface.

Format of the automatically sending back message is:

| No | Field name | Content | Separator | Size | Remarks |
|----|-------------------|---------|-----------|------|----------------------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Error code | 0.. | | 1..2 | 0 – OK. |
| 3 | Response code | #Z | | 2 | |
| 4 | Packet identifier | Text | | 1..5 | Identifier of the sequence |
| 5 | | <ESC>\ | | 2 | |

Errors' codes:

- 2: control byte error,
- 4: parameter error.

Remarks:

1. After setting on the power supply (not after „waking up” the printer), the mode of working with display of error messages (Service mode = 0) is normally chosen.
2. During cooperation with the more advanced applications which use the dialogue with the printer for receiving the confirmation the correctness of conducting specified operations, it is reasonable to send the described sequence in order to block sending messages about errors.
3. Some sequences, irrespectively of setting off messages about errors, require manual confirmation from the keyboard (using the 'YES' button). It usually applies to operations leading to recording the data to the fiscal memory (e.g. changes in VAT rates [Tax of Goods and Services], daily report).

3.1.2. Demand for return the error code of the last command.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|------------|----------------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Ignored | 0..255 or none | | 1 | |
| 3 | Command | #n | | 2 | |
| 4 | | <ESC>\ | | 2 | |

Format of the sending back information looks as follows:

| No | Field name | Content | Separator | Size | Remarks |
|----|------------|---------|-----------|------|---------|
|----|------------|---------|-----------|------|---------|

| | | | | | |
|---|---------------|------------|--|-----|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Response code | 1#E | | 3 | |
| 3 | Error code | 0.. | | 1.. | |
| 4 | | <ESC>\ | | 2 | |

Where:

Error code

Number determining the error code.

Remarks:

1. During realization of this command errors not appears.
2. Error code is not modified after realizing this command, unlike the command demand for setting back cash register information, which realization causes resetting of this code.
3. Error code is cancelled in the moment of realization of each command except the described one; a totally dependable procedure of testing the correctness of realization of the command should also test the byte of CMD response to the ENQ code, which should be sent after each command.
4. For this command, the printer does not return automatic response with error code of last command when error handling mode 3 is enabled.

3.1.3. Demand of the sending back cash register information.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|------------|---|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Mode | 0..21, 22, 23, 24, 99 and: 50, 52, 53, 62, 63, 90, 100, 200 or none | | 0..2 | |
| 3 | Command | #s | | 2 | |
| 4 | | <ESC>\ | | 2 | |

The printer's response format depends on the value of the Mode parameter.

For mode 0..21 (also when the mode does not appear), the format of the printer's response is in accordance to older versions of fiscal printers. It has been stated as a rule that the free charge {No TAX} is defined in the 'G' rate (the last one), thanks to what the response format does not change in relation to previous versions (except the unique number which is 1 character longer). In such case (if one free rate in the printer is attributed to letter 'G') and there are 1..6 VAT defined rates. Format of the sending back information looks as follows:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------------------|------------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Response code | 1#X | | 3 | |
| 3 | The last error | 0.. | ; | 1.. | |
| 4 | Fiscalization (Approval) | 0..1 | ; | 1 | |
| 5 | Transaction | 0..1 | ; | 1 | |
| 6 | Transaction OK. | 0..1 | ; | 1 | |
| 7 | Constant value | 1 | ; | 1 | |
| 8 | Number of resets | 0.. | ; | 1.. | |
| 9 | Year | 0..99 | ; | 1..2 | |
| 10 | Month | 1..12 | ; | 1..2 | |

| | | | | | |
|----|----------------------|-------------|---|-------|---|
| 11 | Day | 1..31 | / | 1..2 | |
| 12 | VAT A | Number | / | 1..11 | The quantity of the VAT rates sent back is the same as programmed in the printer |
| 13 | VAT B | Number | / | 1..11 | |
| 14 | VAT C | Number | / | 1..11 | |
| 15 | VAT D | Number | / | 1..11 | |
| 16 | VAT E | Number | / | 1..11 | |
| 17 | VAT F | Number | / | 1..11 | |
| 18 | Quantity of receipts | 0.. | / | 1.. | |
| 19 | Totalizer A | Number | / | 1..11 | Quantity of totalizers sent back is at1 higher than the quantity of VAT rates sent back. The last totalizer includes the data for the free rate |
| 20 | Totalizer B | Number | / | 1..11 | |
| 21 | Totalizer C | Number | / | 1..11 | |
| 22 | Totalizer D | Number | / | 1..11 | |
| 23 | Totalizer E | Number | / | 1..11 | |
| 24 | Totalizer F | Number | / | 1..11 | |
| 25 | Totalizer G | Number | / | 1..11 | |
| 26 | Cash | Number | / | 1..11 | |
| 27 | Unique number | Inscription | | 13 | Approval 2001 – 11 characters: 3 letters and 8 digits. Approval 2014 – 13 characters: 3 letters and 10 digits. Before approval 2001 10 characters: 2 letters and 8 digits |
| 28 | | <ESC>\ | | 2 | |

Note! For this mode (0..21), the printer does not return automatic response with error code of last command when error handling mode 3 is enabled.

If the VAT rates were defined for the printer using the [change in VAT rates](#) with the parameter of rates' quantity = 7, the programmers can send the described sequence with the parameter Mode = 22, 23 or 99. In such case, the response format is 'rigid' and looks as follows:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------------|------------|-----------|-------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Response code | 2#X | | 3 | |
| 3 | The last error | 0.. | ; | 1.. | |
| 4 | Fiscalization | 0..1 | ; | 1 | |
| 5 | Transaction | 0..1 | ; | 1 | |
| 6 | Transaction OK. | 0..1 | ; | 1 | |
| 7 | Constant value | 1 | ; | 1 | |
| 8 | Number of resets | 0.. | ; | 1.. | |
| 9 | Year | 0..99 | ; | 1..2 | |
| 10 | Month | 1..12 | ; | 1..2 | |
| 11 | Day | 1..31 | / | 1..2 | |
| 12 | VAT A | Number | / | 1..11 | |
| 13 | VAT B | Number | / | 1..11 | |
| 14 | VAT C | Number | / | 1..11 | |
| 15 | VAT D | Number | / | 1..11 | |
| 16 | VAT E | Number | / | 1..11 | |
| 17 | VAT F | Number | / | 1..11 | |
| 18 | VAT G | Number | / | 1..11 | |
| 18 | Quantity of receipts | 0.. | / | 1.. | |

| | | | | | |
|----|----------------------|-------------|---|-------|---|
| 19 | Totalizer A | Number | / | 1..11 | |
| 20 | Totalizer B | Number | / | 1..11 | |
| 21 | Totalizer C | Number | / | 1..11 | |
| 22 | Totalizer D | Number | / | 1..11 | |
| 23 | Totalizer E | Number | / | 1..11 | |
| 24 | Totalizer F | Number | / | 1..11 | |
| 25 | Totalizer G | Number | / | 1..11 | |
| 26 | Returnable packaging | Number | / | 1..11 | |
| 27 | Unique number | Inscription | | 13 | Approval 2001 – 11 characters: 3 letters and 8 digits. Approval 2014 – 13 characters: 3 letters and 10 digits. Before approval 2001 10 characters: 2 letters and 8 digits |
| 28 | Control byte | 00..FF | | 2 | |
| 29 | | <ESC>\ | | 2 | |

In both cases the response looks the same, but for mode parameter = 22, the information about sent back totalizers concerns the current (open) receipt, while in case of mode = 23 it includes summary values starting from the last daily report and if the mode = 99, the information about the cash is sent in the Cash field, but in €, not in PLN [zł].

Note! For mode 23, the printer does not return automatic response with error code of last command when error handling mode 3 is enabled.

To read detailed information about how much fiscal memory is already occupied, about value of the last receipt and amount of blocked goods, one should use Type = 24. The response packet looks as follow:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------------------|------------|-----------|-------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Response code | 3#X | | 3 | |
| 3 | Year | 0..9999 | ; | 4 | |
| 4 | Month | 1..12 | ; | 1..2 | |
| 5 | Day | 1..31 | ; | 1..2 | |
| 6 | Amount of recorded reports | Number | / | 1..10 | |
| 7 | Amount of free reports | Number | / | 1..10 | |
| 8 | Amount of blocked goods | Number | / | 1..10 | |
| 9 | Totalizer A par. | Number | / | 1..11 | |
| 10 | Totalizer B par. | Number | / | 1..11 | |
| 11 | Totalizer C par. | Number | / | 1..11 | |
| 12 | Totalizer D par. | Number | / | 1..11 | |
| 13 | Totalizer E par. | Number | / | 1..11 | |
| 14 | Totalizer F par. | Number | / | 1..11 | |
| 15 | Totalizer G par. | Number | / | 1..11 | |
| 16 | Control byte | 00..FF | | 2 | |
| 17 | | <ESC>\ | | 2 | |

To get cash information: number of the last printout and amount of printed invoices (the printer with invoice operating for protocol “Novitus compatible”), one should use Type = 50. The response packet looks as follow:

For “Novitus compatible” protocol:

| No. | Field name | Contents | Separator | Size | Remarks |
|-----|---|----------|-----------|-------|------------------------------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | 50#X | | 2 | |
| 3 | Number of documents reduced by number of invoices | Number | / | 1..10 | |
| 4 | Number of invoices | Number | / | 1..10 | Number of the last printed invoice |
| 5 | Constant value | 0 | / | 1 | |
| 6 | Constant value | 0 | / | 1 | |
| 7 | Constant value | 0 | / | 1 | |
| 8 | Control byte | 00..FF | | 2 | |
| 9 | | <ESC>\ | | 2 | |

For Novitus protocol:

| No. | Field name | Contents | Separator | Size | Remarks |
|-----|----------------------------|----------|-----------|--------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | 50#X | | 2 | |
| 3 | Number of document | Number | / | 1..10 | Number of the last printed document |
| 4 | Reset printer's totalizers | 0,1 | / | 1 | 1 – yes 0 – no |
| 5 | Number of invoices | 0 | / | 1...10 | Field accessible if device manage invoice operating |
| 6 | Constant value | 0 | / | 1 | |
| 7 | Constant value | 0 | / | 1 | |
| 8 | Constant value | 0 | | 1 | |
| 9 | Control byte | 00..FF | | 2 | |
| 10 | | <ESC>\ | | 2 | |

To get information about state of cache memory carrier, one should use Type = 90. The response packet looks as follow:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|-------------------------------------|------------|-----------|-------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | 90#X | | 2 | |
| 3 | Card label | Text | <CR> | 1..10 | |
| 4 | Card state | Text | <CR> | 1 | 'O' – open, 'Z' – closed, 'N' – unknown, 'W' – card out (no card), 'B' – error on the card, '?' – unknown state |
| 5 | Card size | Number | <CR> | 1..14 | (in bytes) |
| 6 | How much free place | Number | <CR> | 1..14 | (in bytes) |
| 7 | Amount of data files on the card | Number | <CR> | 1..10 | |
| 8 | Amount of free daily reports | Number | <CR> | 1..4 | |
| 9 | Number of the last daily report | Number | <CR> | 1..4 | (1830 – max. number) |
| 10 | Date and time of the last record on | Date, time | <CR> | 16 | (The last complete record of the file with report) |

| | | | | | |
|----|--------------|--------|--|---|--------------------------|
| | the card | | | | format: yyyy-mm-dd hh:mm |
| 11 | Control byte | 00..FF | | 2 | |
| 12 | | <ESC>\ | | 2 | |

To get information about totalizers value and transaction state, one should use Type = 100. The order packet looks as follow:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|---------------------------|---------|-----------|------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant | 100 | ; | 3 | |
| 3 | Type of sent back amounts | 0..2 | ; | 1 | Type of sent back amounts: 0 – gross quota 1 – net quota 2 – VAT quota |
| 5 | Command | #s | | 2 | |
| 17 | Control byte | 00..FF | | 2 | |
| 18 | | <ESC>\ | | 2 | |

The respond packet looks as follow:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|-------------------------|---------|-----------|-------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant value | 100 | ; | 3 | |
| 3 | Type of amounts | 0..2 | ; | 1 | Type of sent back amounts: 0 – gross quota 1 – net quota 2 – VAT quota |
| 4 | Transaction state | Number | | 1..2 | Transaction state: 0 – no transaction 1 – receipt 17 – receipt in block mode (OFFLINE) 19 – VAT invoice |
| 5 | Command | #x | | 2 | |
| 6 | Sum of totalizers value | Number | / | 1..20 | |
| 7 | Totalizer A | Number | / | 1..20 | |
| 8 | Totalizer B | Number | / | 1..20 | |
| 9 | Totalizer C | Number | / | 1..20 | |
| 10 | Totalizer D | Number | / | 1..20 | |
| 11 | Totalizer E | Number | / | 1..20 | |
| 12 | Totalizer F | Number | / | 1..20 | |
| 13 | Totalizer G | Number | / | 1..20 | |
| 14 | Constant value | 0 | / | 1 | |
| 15 | Constant value | 0 | / | 1 | |
| 16 | Constant value | 0 | / | 1 | |
| 17 | Control byte | 00..FF | | 2 | |
| 18 | | <ESC>\ | | 2 | |

To obtain information on the status of a selected item of a VAT invoice (printers with invoice operating), use Type = 200. The order package has the following structure:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|---------------------|---------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant value | 200 | ; | 3 | |
| 3 | Type of information | 0..2 | ; | 1 | Type of information about selected VAT invoice item: |

| | | | | | |
|---|-----------------|-----------|--|------|---|
| | | | | | 0 – gross value, 1 – net value, 2 – VAT value |
| 4 | Position number | 0..255 | | 1..3 | VAT invoice item number counted from 0 (zero). |
| 5 | Command | #s | | 2 | |
| 6 | Control byte | 00..FF | | 2 | |
| 7 | | <ESC>\ | | 2 | |

The respond packet looks as follow:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------|-----------|-----------|-------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant value | 200 | | 3 | |
| 3 | Command | #x | | 2 | |
| 4 | Amount | Number | / | 1..20 | |
| 5 | Control byte | 00..FF | | 2 | |
| 6 | | <ESC>\ | | 2 | |

To get information of device working time, one should use Type = 211. The order package has the following structure:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------|-----------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant value | 211 | | 3 | |
| 3 | Command | #s | | 2 | |
| 4 | | <ESC>\ | | 2 | |

The respond packet looks as follow:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------------|-----------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant value | 211 | | 3 | |
| 3 | Command | #x | | 2 | |
| 4 | Time in milliseconds | Number | ; | | TickCount |
| 5 | Work time in seconds | Number | ; | | System work time in seconds |
| 6 | Application start | Text | <CR> | | Text – date and time of starting application |
| 7 | Control byte | 00..FF | | 2 | |
| 8 | | <ESC>\ | | 2 | |

The order is dedicated to setting mode of totalizers resending as answer to order #s Type 22.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------|------------|-----------|------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant value | 243 | ; | 3 | |
| 3 | Sent back mode | 0, 1 | | | Send back mode: 0 – totalizers data from last fiscal document, receipt or invoice, 1 – totalizers data of invoice (total) |
| 5 | Command | \$r | | 2 | |
| 6 | Control byte | 00..FF | | 2 | |

| | | | | | |
|---|--|--------|--|---|--|
| 7 | | <ESC>\ | | 2 | |
|---|--|--------|--|---|--|

Where:

The last error

Error code of realization of the present sequence, 0 if the sequence was not correctly realized or was not recognized,

Fiscalisation

0: training work mode,

1: fiscal work mode,

Transaction

1: the printer is in the transaction mode,

Transaction OK

1: the last transaction has been successfully finished,

Number of resets

The quantity of RAM resets recorded in fiscal memory,

Year, Month, Day

The date of the last record to the fiscal memory,

VAT A .. VAT G

VAT tax rates. If the rate is free it is sent as 98.99, while if not used – as 99.99.

Quantity of receipts

The quantity of printed fiscal receipts (≤ number of the next ≥ -1); fiscal receipts counter is clear during fiscalization and resets of RAM),

Totalizer A .. Totalizer G

States of totalizers of specified VAT rates (gross values),

Totalizer par. A .. Totalizer par. G

States of totalizers of the last receipt for the specified VAT (tax) rates (gross values),

Cash

Status of cash in the cash register (in PLN [zł] or €),

Unique number

Unique number in the ABCNNNNNNNNNN – a new format of unique number

Amount of recorded reports

Data amount (daily reports) recorded in the fiscal memory

Amount of free reports

Amount of free (daily reports) spaces for recording in the fiscal memory

Amount of blocked goods

Amount of blocked goods

Remark:

Errors do not appear.

3.1.4. Sequence sending back the type and version of software (#v).

| No. | Field name | Content | Separator | Size | Remarks |
|-----|------------|-----------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | #v | | 2 | |
| 3 | | <ESC>\ | | 2 | |

Format of the sending back information looks as follow:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|---------------|-------------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Response code | 1#R | | 3 | |
| 3 | Type | Inscription | / | 0.. | |
| 4 | Version | Inscription | | 0.. | |
| 5 | | <ESC>\ | | 2 | |

Where:

Type

inscription describing the type of the device, e.g. NOVITUS HD ONLINE,

Version

number of the software version, e.g. '1.60'.

Error code:

1: not initiated printer's clock.

Or

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|-----------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 3 | Command type | 0..99 | | 1..2 | 30- sends back name and original version |
| 4 | Command | #v | | 4 | |
| 5 | | <ESC>\ | | 2 | |

Format of the sending back information looks as follow:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|---------------|-------------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Response code | 1#R | | 3 | |
| 3 | Type | Inscription | / | 0.. | |
| 4 | Version | Inscription | | 0.. | |
| 5 | | <ESC>\ | | 2 | |

where:

Type

Inscription describing original type of device, e.g. NOVITUS HD ONLINE,

Version

number of software version e.g. '1.60'.

Note! For that order, the printer does not return automatic response with error code of last command when error handling mode 3 is enabled.

3.1.5. Sequence sending back information about the device.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|---------------------|---------|-----------|------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Type of information | Number | | 1 | 0 – general 1 – details for fiscal memory 2 – details on the status of power of battery and accumulator 3 – status of printout 4 – status of drawing 5 – information about cache memory status, 6 – information about data base status, 7 – detailed information for fiscal memory version 3, 8 – additional information for fiscal memory version 4, 10 – detailed information for fiscal memory version 2, 11 – fiscalisation parameters 20 – status of accumulator and power 21 – display type 51 – sending back producer options (via PC) 52 – packets supported by the printer. Warning: Information 7 operated only in printers |

| | | | | | |
|---|---------|------------|--|---|--------------|
| | | | | | ONLINE type. |
| 3 | Command | \$i | | 2 | |
| 4 | | <ESC>\ | | 2 | |

Format of the sending back general information looks as follow:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------------------|------------|-----------|----------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Information type | 0 | | 1 | Constant value – general information |

| 14 | Number of RAM resettings | Number | <CR> | variable | |

| | | | | | |
|----|--|--------|------|----------|---|
| 15 | Maximum number of PTU rates changes | Number | <CR> | variable | |
| 16 | Number of PTU rates changes | Number | <CR> | variable | |
| 17 | Maximum number of currency changes | Number | <CR> | variable | |
| 18 | Number of currency changes | Number | <CR> | variable | |
| 19 | Date of fiscalization | Text | <CR> | 19 | Format: "YYYY-MM-DD HH:MM:SS" Warning: Date is valid in fiscal mode and after closing fiscal mode |
| 20 | Date of closing fiscal mode | Text | <CR> | 19 | Format: "YYYY-MM-DD HH:MM:SS" Warning: Date is valid after closing fiscal mode. |
| 21 | Name of current currency | Text | <CR> | variable | |
| 19 | Date of the last daily report | Text | <CR> | 19 | Format: "YYYY-MM-DD HH:MM:SS" |
| 20 | Date of the last record to the fiscal memory | Text | <CR> | 19 | Format: "YYYY-MM-DD HH:MM:SS" |
| 22 | Control byte | 00..FF | | 2 | |
| 23 | | <ESC>\ | | 2 | |

Format of sending back information – additional information for fiscal memory version 4:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|-----------------------------------|------------|-----------|----------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Information type | 8 | | 1 | Constant value – detailed information for the fiscal memory, version 3. |
| 3 | Response code | \$I | | 3 | |
| 4 | Number of records | number | <CR> | variable | |
| 5 | Maximum number of records | number | <CR> | variable | It may be smaller depending on how you use free space for other records. |
| 10 | Number of discount rates changes | number | <CR> | variable | Concerns ticket ECRs. Maximum number of changes is limited by free space in fiscal memory. |
| 11 | Number of discount group changes | number | <CR> | variable | Concerns ticket ECRs. Maximum number of changes is limited by free space in fiscal memory. |
| 12 | Number of service reviews | number | <CR> | variable | |
| | Maximum number of service reviews | number | <CR> | variable | |
| 13 | Size of recorded data | number | <CR> | variable | In bytes |
| 14 | Maximum size to record | number | <CR> | variable | In bytes |
| 15 | Producer options | number | <CR> | variable | Where the following set bits mean: Bit 1 – operating pharmacy options, Bit 2 – operating ticket options |
| 16 | Control byte | 00..FF | | 2 | |
| 17 | | <ESC>\ | | 2 | |

Format of sending back information about fiscalisation parameters:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|------------------------|---------------|-----------|----------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Information type | 11 | | 1 | Constant value – detailed information for events database, version 2. |
| 3 | Response code | \$I | | 2 | |
| 4 | Status | Number | <CR> | 1 | 0 – Non fiscal, 1 – Fiscal, 2 – mode „only read” |
| 5 | Fiscalisation date | Text | <CR> | 19 | Format: "YYYY-MM-DD HH:MM:SS" Warning: Date is valid in fiscal mode and after closing fiscal mode |
| 6 | NIP number | Text | <CR> | variable | |
| 7 | Registration number | Text | <CR> | variable | |
| 8 | Protected memory ID | Text | <CR> | variable | |
| 9 | Device type | Number | <CR> | 1 | 0 – General, 1 – Taxi, 2 – Pharmacy, 3 – Tickets, 4 – Gastronomic, 5 – Automats, 6 – Duty free |
| 10 | Receipt numbering type | Number | <CR> | 1 | 0 – Global, 1 - Daily |
| 11 | Ownership type | Number | <CR> | 1 | 0 – Ownership, 1 – Leased, 2 – Leasing, 3 – Rent, 4 – Other |
| 12 | Control byte | 00..FF | | 2 | |
| 13 | | <ESC>\ | | 2 | |

Format of sending back information on status of accumulator and power:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--|------------|-----------|----------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Information type | 20 | | 1 | Constant value – information on status of accumulator and power |
| 3 | Response code | \$I | | 2 | |
| 4 | Power mode | Number | <CR> | variable | 0 – working on accumulator 1 – working on power supply |
| 5 | Voltage of power supply [mV] | Number | <CR> | variable | - 1 – device does not have a power supply voltage measurement |
| 6 | Voltage of accumulator [mV] | Number | <CR> | variable | |
| 7 | Battery voltage to sustain RAM/ clock [mV] | Number | <CR> | variable | |
| 8 | Status of accumulator | Number | <CR> | variable | 0 – completely discharged 1 – low level of charging 2 – charged and works correctly 3 – accumulator is charging.... 4 – accumulator voltage out of range 5 – accumulator damaged |
| 9 | Status of battery sustaining RAM / clock | Number | <CR> | variable | 0 – discharged / damaged 1 – must be charged 2 – correct |
| 10 | The accumulator level [%] | Number | <Cr> | variable | |

| | | | | | |

| 9 | | <ESC>\ | | 2 | |

Format of sending back logs:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|---------------|-------------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Response code | @LOG | | 4 | |
| 3 | Data | Text | <CR> | | Data from logs |
| 4 | Status | Number | / | 1 | 1 – there are further data 2 – end of data, the whole file with logs read |
| 5 | Control byte | 00..FF | | 2 | |
| 6 | | <ESC>\ | | 2 | |

3.1.9. Demand of sending back the time set in the printer.

| No | Field name | Content | Separator | Size | Remarks |
|----|------------|----------------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Ignored | 0..255 or none | | 1 | |
| 3 | Command | #c | | 2 | |
| 4 | | <ESC>\ | | 2 | |

Format of sending back information looks as follow:

| No | Field name | Content | Separator | Size | Remarks |
|----|---------------|------------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Response code | 1#C | | 3 | |
| 3 | Year | 0..49 | ; | 1..2 | |
| 4 | Month | 1..12 | ; | 1..2 | |
| 5 | Day | 1..31 | ; | 1..2 | |
| 6 | Hour | 0..23 | ; | 1..2 | |
| 7 | Minute | 0..59 | ; | 1..2 | |
| 8 | Seconds | 0..59 | | 1..2 | |
| 9 | | <ESC>\ | | 2 | |

Where:

Year, Month, Day

Date set in the printer,

Hour, Minute, Second

Time set in the printer.

Errors' codes:

1: not initiated printer's clock,

5: printer's RTC clock readout error

Note! For that order, the printer does not return automatic response with error code of last command when error handling mode 3 is enabled.

3.1.10. Readout of fiscal memory content.

Readout of the fiscal memory is started by determining the date or the number of the record, starting from which, sending the information back shall be proceeded.

In case of date, the sent sequence looks as follow:

| No | Field name | Content | Separator | Size | Remarks |
|----|------------|-----------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Mode | 25 | ; | 2 | |
| 3 | Year | 0..99 | ; | 1..2 | |
| 4 | Month | 1..12 | ; | 1..2 | |
| 5 | Day | 1..31 | ; | 1..2 | |
| 6 | Hour | 0..23 | ; | 1..2 | |
| 7 | Minute | 0..59 | ; | 1..2 | |
| 8 | Second | 0..59 | ; | 1..2 | |
| 9 | Command | #s | | 2 | |
| 10 | | <ESC>\ | | 2 | |

In case of daily report number, the sequence looks as follow:

| No | Field name | Content | Separator | Size | Remarks |
|----|---------------------|-----------|-----------|-------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Mode | 26 | | 2 | |
| 3 | Command | #s | | 2 | |
| 4 | Daily report number | Number | / | 1..10 | |
| 5 | | <ESC>\ | | 2 | |

After defining where the readout of the content of fiscal memory should start from, reading out the subsequent records may start. To provide this, prior to each readout, one should send the sequence of each subsequent record, demanding sending it back and setting at the next one. This sequence always looks as follow:

| No | Field name | Content | Separator | Size | Remarks |
|----|------------|-----------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Mode | 27 | | 2 | |
| 3 | Command | #s | | 2 | |
| 4 | | <ESC>\ | | 2 | |

Formats of the sending back information look as follow:

Daily report record:

| No | Field name | Content | Separator | Size | Remarks |
|----|---------------------------------|-------------|-----------|-------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Response code | 10#X | | 4 | |
| 3 | Year | 0..49 | ; | 1..2 | |
| 4 | Month | 1..12 | ; | 1..2 | |
| 5 | Day | 1..31 | ; | 1..2 | |
| 6 | Hour | 0..23 | ; | 1..2 | |
| 7 | Minute | 0..59 | ; | 1..2 | |
| 8 | Second | 0..59 | ; | 1..2 | |
| 9 | Number of receipts | Number | ; | 1..10 | |
| 10 | Number of cancelled receipts | Number | ; | 1..10 | |
| 11 | Quantity of changes in PLU base | Number | ; | 1..10 | |
| 12 | Value of cancelled receipts | Number | / | 1..11 | |

| | | | | | |
|----|--------------|--------|---|-------|--|
| 13 | Totalizer A | Number | / | 1..11 | |
| 14 | Totalizer B | Number | / | 1..11 | |
| 15 | Totalizer C | Number | / | 1..11 | |
| 16 | Totalizer D | Number | / | 1..11 | |
| 17 | Totalizer E | Number | / | 1..11 | |
| 18 | Totalizer F | Number | / | 1..11 | |
| 19 | Totalizer G | Number | / | 1..11 | |
| 20 | Control byte | 00..FF | | 2 | |
| 21 | | <ESC>\ | | 2 | |

Record of changes in VAT rates:

| No | Field name | Content | Separator | Size | Remarks |
|----|----------------|-------------|-----------|-------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Response code | 11#X | | 4 | |
| 3 | Year | 0..49 | ; | 1..2 | |
| 4 | Month | 1..12 | ; | 1..2 | |
| 5 | Day | 1..31 | ; | 1..2 | |
| 6 | Hour | 0..23 | ; | 1..2 | |
| 7 | Minute | 0..59 | ; | 1..2 | |

| 10 | Constant value | 0 | ; | 1 | |
| 11 | Constant value | 0 | ; | 1 | |
| 12 | Constant value | 0 | / | 1 | |
| 13 | VAT A | Number | / | 1..11 | |
| 14 | VAT B | Number | / | 1..11 | |
| 15 | VAT C | Number | / | 1..11 | |
| 16 | VAT D | Number | / | 1..11 | |
| 17 | VAT E | Number | / | 1..11 | |
| 18 | VAT F | Number | / | 1..11 | |
| 19 | VAT G | Number | / | 1..11 | |
| 20 | Control byte | 00..FF | | 2 | |
| 21 | | <ESC>\ | | 2 | |

Record of RAM resets:

| No | Field name | Content | Separator | Size | Remarks |
|----|------------------|-------------|-----------|-------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Response code | 12#X | | 4 | |
| 3 | Year | 0..49 | ; | 1..2 | |
| 4 | Month | 1..12 | ; | 1..2 | |
| 5 | Day | 1..31 | ; | 1..2 | |
| 6 | Hour | 0..23 | ; | 1..2 | |
| 7 | Minute | 0..59 | ; | 1..2 | |
| 8 | Second | 0..59 | ; | 1..2 | |
| 9 | Reason for reset | Number | ; | 1..10 | |
| 10 | No of reset | Number | ; | 1..10 | |

| | | | | | |
|----|----------------|--------|---|---|--|
| 11 | Constant value | 0 | ; | 1 | |
| 12 | Constant value | 0 | / | 1 | |
| 13 | Constant value | 0 | / | 1 | |
| 14 | Constant value | 0 | / | 1 | |
| 15 | Constant value | 0 | / | 1 | |
| 16 | Constant value | 0 | / | 1 | |
| 17 | Constant value | 0 | / | 1 | |
| 18 | Constant value | 0 | / | 1 | |
| 19 | Constant value | 0 | / | 1 | |
| 20 | Control byte | 00..FF | | 2 | |
| 21 | | <ESC>\ | | 2 | |

The sequence informing that there are no more records left to read:

| No | Field name | Content | Separator | Size | Remarks |
|----|----------------|-------------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Response code | 25#X | | 4 | |
| 3 | Constant value | 0 | ; | 1 | |
| 4 | Constant value | 0 | ; | 1 | |
| 5 | Constant value | 0 | ; | 1 | |
| 6 | Constant value | 0 | ; | 1 | |
| 7 | Constant value | 0 | ; | 1 | |
| 8 | Constant value | 0 | ; | 1 | |
| 9 | Constant value | 0 | ; | 1 | |
| 10 | Constant value | 0 | ; | 1 | |
| 11 | Constant value | 0 | ; | 1 | |
| 12 | Constant value | 0 | / | 1 | |
| 13 | Constant value | 0 | / | 1 | |
| 14 | Constant value | 0 | / | 1 | |
| 15 | Constant value | 0 | / | 1 | |
| 16 | Constant value | 0 | / | 1 | |
| 17 | Constant value | 0 | / | 1 | |
| 18 | Constant value | 0 | / | 1 | |
| 19 | Constant value | 0 | / | 1 | |
| 20 | Control byte | 00..FF | | 2 | |
| 21 | | <ESC>\ | | 2 | |

Where:

Year, Month, Day

Date set in the printer,

Hour, Minute

Time set in the printer.

Error codes:

- 1: not initiated printer's clock,
- 5: printer's RTC clock readout error

3.1.11. Readout of the fiscal memory for devices with approval of 2009.

Initial orders:

For initiation of the starting record there are used orders with parameter:

- 25 – setting according dates,
- 26 – setting according daily report number

After specifying the starting point for reading contents of fiscal memory, you can begin reading subsequent records. For this purpose, before reading each next record, a sequence requesting its return and positioning at the next one must be sent. Additionally, reading always begins with reading the last record of the VAT rate change preceding the specified range. This sequence has the following form:

Readout orders:

Order of readout the current record:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------|-----------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant value | 37 | | 2 | |
| 3 | Command | #s | | 2 | |
| 4 | | <ESC>\ | | 2 | |

Response

Data of daily report's record:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|---------------------------------|-----------|-----------|-------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant value | 20 | | 2 | |
| 3 | Respond code | #X | | 2 | |
| 4 | Year | 0..49 | ; | 1..2 | |
| 5 | Month | 1..12 | ; | 1..2 | |
| 6 | Day | 1..31 | ; | 1..2 | |
| 7 | Hour | 0..23 | ; | 1..2 | |
| 8 | Minute | 0..59 | ; | 1..2 | |
| 9 | Second | 0..59 | ; | 1..2 | |
| 10 | Amount of receipts | Number | ; | 1..10 | |
| 11 | Amount of cancelled receipts | Number | ; | 1..10 | |

- 5: printer's RTC clock readout error

3.1.12. Readout of the fiscal memory content – extended version.

Order of setting initial record according to date (NOVITUS):

| No. | Field name | Content | Separator | Size | Remarks |
|-----|------------|-------------|-----------|------|-----------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Mode | 53, 54, 55, | | 2 | (read: Warning) |

| | | | | | |
|----|---------|-----------|---|------|--|
| | | 56 | | | |
| 3 | Year | 0..99 | ; | 1..2 | |
| 4 | Month | 1..12 | ; | 1..2 | |
| 5 | Day | 1..31 | ; | 1..2 | |
| 6 | Hour | 0..23 | ; | 1..2 | |
| 7 | Minute | 0..59 | ; | 1..2 | |
| 8 | Second | 0..59 | ; | 1..2 | |
| 9 | Command | #s | | 2 | |
| 10 | | <ESC>\ | | 2 | |

Order of setting initial record according to daily report number (NOVITUS):

| No. | Field name | Content | Separator | Size | Remarks |
|-----|---------------------|------------------|-----------|-------|----------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Mode | 63, 64 65, 66 | | 2 | (read Warning) |
| 3 | Command | #s | | 2 | |
| 4 | Daily report number | Number | / | 1..10 | |
| 5 | | <ESC>\ | | 2 | |

Warning:

After setting the mode of the fiscal memory reading to 53 or 63, the printer sends back packets with ID: 11, 12, 25, 30, 31, 32, 33.

- (11) – tax rates change,
- (25) – end of data,
- (30) – setting currency change,
- (31) – currency change,
- (32) – daily report,
- (12) – resetting,

After setting the mode of the fiscal memory reading to 54 or 64, the printer sends back packets with ID: 11, 36, 25, 30, 31, 34, 35.

- (11) - tax rates change,
- (25) - end of data,
- (30) - setting currency change,
- (31) - currency change,
- (34) - daily report: pharmacy counters,
- (34) - daily report: electronic signature,
- (36) - resetting: additional flags,

After setting the mode of the fiscal memory reading to 55 or 65, the printer sends back packets with ID: 11, 36, 25, 30, 31, 37, 38.

- (11) - tax rates change,
- (25) - end of data,
- (30) - setting currency change,
- (31) - currency change,
- (37) - daily report: pharmacy counters,
- (37) - daily report: electronic signature,
- (37) – daily report, dates of beginning and ending sales,
- (36) - resetting: additional flags.

After setting the mode of the fiscal memory reading to 56 or 66, the printer sends back packets with ID: 11, 36, 25, 30, 31, 39, 38.

- (11) - tax rates change,
- (25) - end of data,
- (30) - setting currency change,
- (31) - currency change,
- (39) - daily report: pharmacy counters,
- (39) - daily report: electronic signature,
- (39) - daily report, dates of beginning and ending sales,
- (39) – daily report: ticket's counters (ticket machine functionality),

- (36) - resetting: additional flags,

After specifying the starting point for reading contents of fiscal memory, you can begin reading subsequent records. For this purpose, before reading each next record, a sequence requesting its return and positioning at the next one must be sent. Additionally, reading always begins with reading the last record of the VAT rate change preceding the specified range. This sequence has the following form:

Order of readout:

Order of readout the current record:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|------------|-----------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Mode | 27,40 | | 2 | 27 – text formatting (detailed for the each response packet), 40 – hexadecimal data formatting (general for all response packets) |
| 3 | Command | #s | | 2 | |
| 4 | | <ESC>\ | | 2 | |

Response:

Record's data for hexadecimal data formatting:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------|-----------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |

* - Increasingly from the moment of fiscalisation/approval or currency change.

Remarks:

After setting mode of fiscal memory readout to 53 or 63, the printer sends back packets with ID: 11, 12, 25, 30, 31, 32, 33.

After setting mode of fiscal memory readout to 54 or 64, the printer sends back packets with ID: 11, 36, 25, 30, 31, 34, 35.

After setting mode of fiscal memory readout to 55 or 65, the printer sends back packets with ID: 11, 36, 25, 30, 31, 37, 35.

Where:

Year, Month, Day

Date set in the fiscal printer,

Hour, Minute

Time set in the fiscal printer.

Error's codes:

- 1: not initiated printer's clock,
- 5: printer's RTC clock readout error

3.1.13. Readout of information about protected memory.

Demanding packet of collecting information of protected memory:

3.3 Printer's programming commands.

3.3.1. Setting the clock.

| No | Field name | Content | Separator | Size | Remarks |
|----|------------|---------|-----------|------|-------------------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Year | 0..99 | ; | 1..2 | Two last digits of year |
| 3 | Month | 1..12 | ; | 1..2 | |
| 4 | Day | 1..31 | ; | 1..2 | |
| 5 | Hour | 0..23 | ; | 1..2 | |
| 6 | Minute | 0..59 | ; | 1..2 | |

| | | | | | |
|----|----------------------|-------------|------|-------|--|
| 7 | Second | 0..59 | | 1..2 | |
| 8 | Command | \$c | | 2 | |
| 9 | Cash register number | Inscription | <CR> | 0..8 | Optional parameters – replacing those introduced during cashiers log-in. |
| 10 | Cashier | Inscription | <CR> | 0..32 | |
| 11 | Control byte | 00..FF | | 2 | |
| 12 | | <ESC>\ | | 2 | |

Where:

Year

Two last digits of the year,

Month

Number of the month of the year,

Day

Number of the day of the month,

Hour

Set hour,

Minute

Set minute,

Second

Ignored parameter,

Cash register number

Inscription including cash register number,

Cashier

Inscription including cashier's name,

Errors' codes:

- 2: control byte error,
- 3: wrong quantity of parameters,
- 4: data error,
- 5: printer's RTC clock readout error
- 6: totalizers readout error,
- 7: a date earlier than the date of the last record in the fiscal memory (realization impossible!),
- 8: operation error – non-reset totalizers.

Remarks:

1. In the fiscal mode, if the printer's clock requires initiation (at the first setting on and after its possible 'de-programming' in the effect of discharging of battery) that fact is signaled by a proper message on the display and the stoppage of further performance of the printer takes place! The service can set the proper date with the appliance of service functions.
2. In the fiscal mode, in case of proper performance of the clock, a correcting of not more than 1hour is possible, but only if the totalizers are reset (condition after conducting daily report) and only once after the daily report. The programmed date cannot be earlier than the last record written to the fiscal memory. In the fiscal mode, the described sequence may be used only for clock's corrects of +/- 1 hour once after the daily report.
3. In case of lack of initiation of the clock, realization of controlling sequences is blocked, except ENQ, DLE, BEL, CAN, send cash register information back and set Service mode of the errors. Conducting the reports is also blocked.

3.14.2. Change of tax (PTU) rate.

| No | Field name | Content | Separator | Size | Remarks |
|----|-------------------|------------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Quantity of rates | None, 0..7 | | 0..1 | |
| 3 | Confirmation | 0 lub 1 | | 1 | 0 – programowanie stawek z potwierdzeniem na drukarce, 1 – programowanie stawek bez potwierdzenia na drukarce |
| 4 | Command | \$p | | 2 | |

| | | | | | |
|----|----------------------|-------------|------|-------|--|
| 5 | Cash register number | Inscription | <CR> | 0..8 | Optional parameters – replacing those introduced during cashiers log-in. |
| 6 | Cashier | Inscription | <CR> | 0..32 | |
| 7 | VAT A | Number | / | 1..5 | |
| 8 | VAT B | Number | / | 1..5 | |
| 9 | VAT C | Number | / | 1..5 | |
| 10 | VAT D | Number | / | 1..5 | |
| 11 | VAT E | Number | / | 1..5 | |
| 12 | VAT F | Number | / | 1..5 | |
| 13 | VAT G | Number | / | 1..5 | Quantity of parameters determining VAT rates depends on the value of parameter 2 (Quantity of the tax rates). If there is none or it is 0, there are always four rates, in other cases as much as this parameter is. |
| 14 | Date | Date | ; | 10 | |
| 15 | Control byte | 00..FF | | 2 | Date in format: RRRR-MM-DD . Field is required when programming rates in mode without confirmation on fiscal printer. Field has a control function. If date complies with date in printer, programming will be performed without confirmation, otherwise confirmation will be required. |
| 16 | | <ESC>\ | | 2 | |

Where:

Quantity of VAT rates

- 0 or none: 4 rates are programmed and G rate is presumably programmed as free rate,
- 1..6: G rate is presumably programmed as free rate. Other rates are programmed in accordance with the parameters,
- 7: All rates are programmed in accordance with the given parameters.

For such programming of the VAT rates, the programmers shall use the demand for setting back the cash register information sequence with parameter 23. In such case, in the response the information about all VAT rates is always sent back (7).

Confirmation:

- Takes values:
- 0 – programming rates with confirmation on fiscal printer,
- 1 – programming rates without confirmation fiscal printer

Cash register number

Inscription including cash register number,

Cashier

Inscription including cashier's name,

VAT A ... VAT G: values of VAT rates:

- xx.yy - number from the range 0,00..99,99 excluding 98.99 and 99.99 (attributing a value means that the rate is active),
- 98.99 – signification of a free rate {only for rate quantity parameter = 7}.
- 99.99 – signification of a non-active rate {only for rate quantity parameter = 7}.

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 5: printer's RTC clock operation error
- 6: operation with fiscal memory error
- 7: date error (the one currently set is earlier than the date of last record),
- 8: executing impossible – totalizers not reset,
- 11: wrong quantity of VAT values, error of number or a trial to re-define the same rates as the ones recorded in printer's fiscal memory.

Remarks:

1. In the non-fiscal mode, the sequence causes a record of the VAT rates to the printer's RAM memory,
2. In a newly manufactured facility all rates are inactive,
3. When all rates are inactive:
 - the printer interprets only the sequences: setting the clock, change in VAT rates, printing periodical report, demand for sending back the time set in the printer, demand for sending back cash register information, demand for sending back error code of the last command, sequence sending back the type and version of the software. For other sequences, the device reports error No 18.
 - Trial of fiscalisation (programming the header) causes projecting the proper message.
4. In case of error of realization (error in record to the fiscal memory), further performance of the printer will be suspended, i.e. the printer allows only to conduct periodical reports (it shifts to the condition only for readout),
5. This operation (like all, conducting stable record to the fiscal memory) requires confirmation from the keyboard after prior checking and approval the correctness of the date of printer's clock,
6. Sale in the „non-active” rate is blocked (compare the sequence receipt line). In the daily report only amounts of sale in „active” rates are included.

3.14.3. Automatic PTU rates change.

| No. | Field name | Content | Separator | Size | Remarks |

- 1: not initiated RTC clock,
- 4: parameter error,

3.14.5. Programming the header in devices online type.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|---------------------------------------|---------|-----------|------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Number of header lines | 1..8 | | 1 | |
| 3 | Number of fields in the each of lines | 0..7 | ; | 1 | Number of parameters is the same like described in field 2. |

| | | | | | |
|---|-------------------------------|--------|--|---|---|
| 4 | Command | #a | | 2 | |
| 5 | Blocks of the line definition | | | | Number of blocks is the same like described in parameter 2. Block's format is described below. |
| 6 | Control byte | 00..FF | | 2 | |
| 7 | | <ESC>\ | | 2 | |

Definition block of header lines:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|---------------------------|---------|-----------|------|---|
| 1 | Text attributes in line | 0..1 | / | 1 | 0 – left-aligned 1 – centring 2 – right-aligned |
| 2 | Font attributes in line | 0..63 | / | 1..2 | Font attributes set on bits: 1 – font enlarged, less characters in line by half (enlargement included in the font style) 2 – font raised 3 – font widen, less characters in line by half 4 – invers |
| 3 | Block of definition field | | | | Number of these blocks is the same like described in parameter 3. Format of block is described below. |

Block of definition field in definition block of header line.

| | | | | | |
|---|---|-------------|------|---|---|
| 1 | Field indexes, the number depends on parameter n + 1 ... | 1..7 | / | 1 | 0. Field not exist 1. Tax payer name 2. Postal code 3. City 4. Building number 5. Place/flat number 6. Name of postal office 7. Name of street 8. User field – printed only |
| 2 | Field text, the number depends on parameter n+1 ... | Inscription | <CR> | | |

WARNING. A field with one index is allowed more than once (in subsequent lines). In this case, the device should store the value of this field as a concatenation of individual fragments separated by spaces (this is important when saved in protected memory). However, the header should be stored in the form as above, so that it can be sent back as a response to the request for its content.

3.14.6. Header readout in online devices.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|---------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 4 | Command | ^h | | 2 | |

| 7 | | <ESC>\ | | 2 | |

Response:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|------------------------|---------|-----------|------|----------------------------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Number of header lines | 1..8 | ; | 1 | |
| 3 | Fields number | 0..7 | ; | 1 | Number of these parameters is as |

| | | | | | |
|---|--------------------------|--------|--|---|---|
| | in each line | | | | specified in field no. 2 |
| 4 | Command | #a | | 2 | |
| 5 | Block of line definition | | | | Number of these blocks is as specified in parameter "Number of header lines". Block format described below. |
| 6 | Control byte | 00..FF | | 2 | |
| 7 | | <ESC>\ | | 2 | |

Definition block of header line.

| | | | | | |
|---|-------------------------|-------|---|------|---|
| 1 | Text attributes in line | 0..1 | / | 1 | 0 – left-aligned 1 – centring 2 – right-aligned |
| 2 | Font attributes in line | 0..63 | / | 1..2 | Font attributes set on bits: 1 – enlarged font, number of characters in line reduced by half (enlargement included in font) 2 – raised font 3 – widen font, number of characters in line reduced by half 4 – invers |
| 3 | Field definition block | | | | Number of these blocks is as specified in parameter 3. Block format described below. |

Field definition block in definition block of header line.

| | | | | | |
|---|---|-------------|------|---|--|
| 1 | Field indexes, quantity depending on parameter n + 1 ... | 1..7 | / | 1 | 0. Field not exist 1. Tax payer name 2. Postal code 3. City 4. Building number 5. Apartment number 6. Post office name 7. Street name 8. User field – printed only |
| 2 | Field texts, quantity depending on parameter n+1 ... | Inscription | <CR> | | |

3.14.7. Programming header in online devices (version 10 lines).

| No. | Field name | Content | Separator | Size | Remarks |
|-----|-------------------------------|---------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Number of header lines | 1..10 | ; | 1 | |
| 3 | Number of fields in each line | 0..9 | ; | 1 | Number of these parameters is the same like described in field No.2 |
| 4 | Command | !a | | 2 | |
| 5 | Blocks of line definition | | | | Number of these parameters is the same like described in field No.2 Block format described below. |
| 6 | Control byte | 00..FF | | 2 | |
| 7 | | <ESC>\ | | 2 | |

Definition block of header line.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|-------------------------|-------------|-----------|------|---|
| 1 | Text attributes in line | 0..1 | / | 1 | 0 – left-aligned 1 – centring 2 – right-aligned |
| 2 | Font attributes in line | 0..63 | / | 1..2 | Font attributes set on bits: 1 – font enlarged, less characters in line by half (enlargement included in the font style) 2 – font raised 3 – font widen, less characters in line by half 4 – invers 5 – font raised 4 x 6 – font widen 4 x |
| 3 | Field indexes | 1..8 | / | 1 | 0. Field not exist 1. Tax payer name 2. Postal code 3. City 4. Building number 5. Apartment number 6. Post office name 7. Street name 8. User field – printed only Number of these parameters is equal to the number of fields in line |
| 4 | Field texts | Inscription | <CR> | | Number of these parameters is equal to the number of fields in line |

WARNING. A field with one index is allowed more than once (in subsequent lines). In this case, the device should store the value of this field as a concatenation of individual fragments separated by spaces (this is important when saved in protected memory). However, the header should be stored in the form as above, so that it can be sent back as a response to the request for its content.

3.14.8. Certificate's programming

| No. | Field name | Content | Separator | Size | Remarks |
|-----|---------------------|---------|-----------|------|---|
| 1 | | <ESC>P | | 2 | |
| 3 | Command | @CERT | | 5 | |
| 4 | Kind of certificate | Number | / | | 1 – cacert.pem 2 – client3_cert.pem 3 – client3_key.pem 5 – eReceipt certificate 1 (format DER |
| 5 | Total data size | Number | / | | Total data size in binary format |
| 6 | Data offset | Number | / | | Data offset in format hex |
| 7 | Data | Text | <CR> | | Data in format hex |
| 8 | Control byte | 00..FF | | 2 | |
| 9 | | <ESC>\ | | 2 | |

3.14.9. Sha256 certificate readout

|-----|---------------------|---------|-----------|------|---|
| 1 | | <ESC>P | | 2 | |
| 3 | Command | ?CERT | | 5 | |
| 4 | Kind of certificate | Number | / | | 1 – cacert.pem 2 – client3_cert.pem 3 – client3_key.pem |
| 9 | Control byte | 00..FF | | 2 | |
| 10 | | <ESC>\ | | 2 | |

Response:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|-----------------------------|---------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 3 | Command | ?CERT | | 5 | |
| 4 | Certificate's Sha256 in hex | Text | <CR> | 64 | |
| 9 | Control byte | 00..FF | | 2 | |
| 10 | | <ESC>\ | | 2 | |

3.14.10. Controlling the display/drawer.

| No | Field name | Content | Separator | Size | Remarks |
|----|------------|-----------------|-----------|------|---------------------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Action | 1..5, 8..9, 255 | | 1 | |
| 3 | Command | \$d | | 2 | |
| 4 | Text | Inscription | | | Must not include <ESC>... |
| 5 | | <ESC>\ | | 2 | |

Where:

Action

- 1: opening the drawer
- 2: sending the inscription to the display
- 3: switching the display into clock and data display mode
- 4: switching the display back into cash register mode
- 5: ignored
- 8: ignored
- 9: ignored
- 255: switching on sleep mode (NOVITUS HDe – PC, PC2)

Text

Inscription sent to the display

Errors' codes:

- 4: parameter error,
- 9: error of enter/ exit operation

Remarks:

1. Sequence does not possess control byte – characters are sent to the display without buffering (directly after being read out by the printer).
2. The following controlling codes are allowed: CR, LF, BS and FF (\$0C) causing cleaning the display and moving the vector to the upper left corner. Display of the vector and automatic moving to a new line are blocked.
3. During issuing the receipt, the display is automatically serviced by the printer's program. Names of the subsequent goods appear in the first line, while in the second – the growing sum of charge. Thus, nothing shall be sent to the display in this mode.

3.14.11. Controlling the display in mode out off receipt.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|-----------------|---------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Operation | 0 | | 1 | 0 – displaying text on customer display 1 – display switch off |
| 4 | Command | ld | | 2 | |
| 5 | Text to display | Text | | | Text to show on display. May be used <CR> as character of transition to the new line |

| | | | | | |
|----|--------------|--------|--|---|--|
| 26 | Control byte | 00..FF | | 2 | |
| 27 | | <ESC>\ | | 2 | |

3.14.12. Controlling the display with QR code supporting.

| No. . | Field name | Content | Separator | Size | Remarks |
|-------|----------------------|---------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant | 2 | ; | 1 | |
| 3 | Clock on the display | 0..1 | | | 0- |
| 4 | Switched on | | | | |
| 5 | Command | !d | | 3 | |
| 6 | Line 1 | text | <CR> | 70 | |
| 7 | Line 2 | text | <CR> | 70 | |
| 8 | Line 3 | text | <CR> | 70 | |
| 9 | QR code data | text | <CR> | 512 | |
| 10 | Control byte | 00..FF | | 2 | |

Line 1..3

The maximum line length is 70 characters, but depending on width of the letters, fewer characters may fit on the screen. In that case, text will be shortened, and at the end, additional characters will be added „...“.

QR code data

Depending on number of sent lines, QR code is scaled, and smaller amount of data can be transmitted.

3.14.13. Setting data to be displayed as QR code on the screen.

| No.. | Field name | Content | Separator | Size | Remarks |
|------|--------------|---------|-----------|------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Type | 0..1 | | 1 | Type of displayed QR code: 0 – small QR code gr (111x111), maximum 106 characters, 1 – large QR code qr (171x171), maximum 271 characters |
| 3 | Command | !qr | | 3 | |
| 4 | Text | text | <CR> | 271 | |
| 5 | Control byte | 00..FF | | 2 | |
| 6 | | <ESC>\ | | 2 | |

3.14.14. Controlling the cutter and paper feeding in open document.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|-------------------------------|---------|-----------|------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | !p | | 2 | |
| 3 | Cutting | Number | / | 1 | 1 – unchanged value, 0 – no cutting, 1 – complete cutting, 2 – partial cutting |
| 4 | Paper feed after printout end | Number | / | 1 | 1 – unchanged value, 0 – no cutting, 1 – paper feed after printout end |
| 5 | Control byte | 00..FF | | 2 | |
| 6 | | <ESC>\ | | 2 | |

Warning:

- order should be sent in open receipt, invoice or non-fiscal printout,
- paper feeding after printout end concerns situation if there is no paper cutting.

Error codes:

- 1: not initiated RTC clock,
- 2: control byte error,
- 4: parameter error,
- 1031: order not allowed in this mode

3.14.13. Choosing the method of charging the discount.

| No | Field name | Content | Separator | Size | Remarks |
|----|--------------|------------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Method | 0..2 | | 1 | 0 – bezpośrednia, 1 – pośrednia 2 – odczyt metody liczenia |
| 3 | Command | \$r | | 2 | |
| 4 | Control byte | 00..FF | | 2 | |
| 5 | | <ESC>\ | | 2 | |

Where:

Method

$$r_p = W * r_{\%} \quad \text{direct}$$

or

$$r_p = W * (100\% + r_{\%}) - W \quad \text{indirect}$$

where:

- W - basic value (quantity x price in case of discount, price in case of reduction),
- $r_{\%}$ - percentage value of discount / reduction ($r_{\%} < 0$ – rabat, $r_{\%} > 0$ – narzut) with precision up to 2 decimal places

Errors' codes:

- 1: not initiated printer's clock,
- 4: parameter error,

Remarks:

1. The presumable setting is the first method of charging the discount. More information you can find in chapter 7 - Calculations made by the fiscal printer during receipts printing.
2. $r_{\%} < 0$ always in case of reduction.

Received packet:

| No. | Field number | Content | Separator | Size | Remarks |

3.14.18. Operating with graphic logo.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|-------------------------------------|----------------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Function | Decimal digit | ; | | This item informs about what operation is about to be done: 0 – register to printer 1 – deleting graphic from printer 10 – read of graphic control sum 11 – read of graphic data |
| 3 | ID of advertisement graphic | Decimal digit | ; | | ID of advertisement graphic, operated in devices with graphic advertisements (BONO). In case of programming graphic of printout, the parameter value should be 0. |
| 4 | ID of printout graphic | Decimal digit | | | ID of printout graphic. In case of programming graphic of advertisement, the parameter doesn't appear. HDE – possibility of programming up to 128 graphics. |
| 3 | Order | ^f | | | |
| 4 | Centring | Decimal digit | / | | Not operated, default = 0 |
| 5 | Total size of graphic (hexadecimal) | Decimal number | / | | Total size of graphic together with dimensions (first 4 bytes (8 hexadecimally)) in hexadecimal form (binary x2) |
| 6 | Graphic offset | Decimal number | / | | Item of graphic data offset in hexadecimal format (binary x2) |
| 7 | Size of graphic part in package | Decimal number | / | | Item of graphic data size sent in package in hexadecimal format (binary x2) |

| | | | | | |
|----|--------------|--------|------|--------|---|
| 8 | Graphic data | Text | <CR> | 0..128 | Data should be sent in hexadecimal format (binary size x 2). First 4 bytes (8 hexadecimally) represents width and height sent graphic. Graphic should be in monochromatic form sent from the first line to the last one. Maximum size of graphic in binary form for graphic with resolution of 396x256 is (12804 [B] (together with 4 bytes of width and height parameters). |
| 9 | Control byte | 00..FF | | 2 | |
| 10 | | <ESC>\ | | 2 | |

Where:

Graphic data

Graphic data more than 128 bytes (binary, so 64 binary) should be sent in many packages with simultaneous asking about ENQ status after sending each package.

Function

Function 10 to read control sum – the device analyses taking parameter: graphic ID and send back data of control sum in field Graphic data.

Function 11 to graphic read - the device takes parameters: graphic ID and graphic offset and it sends back: total size, size in package and graphic data.

Graphic data

Maximum graphic size for the devices can have a different resolution:

| | |
|-------|-------------|
| HDe | 576 x 256px |
| Delio | 396 x 256px |
| Bono | 384 x 256px |
| Deon | 384 x 256px |
| Sento | 384 x 256px |

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error,
- 1075: incorrect format of graphic header (e.g. too big dimensions),
- 1076: header already programmed, one must delete existing header and then program a new one

| 13 | | <ESC>\ | | 2 | |

Where:

Quantity of positions

Quantity of sale positions = 0..255, if 0 than the ON-LINE receipts (the received lines are printed currently).

Quantity of lines

Quantity of additional lines localized at foot note of the receipt, after the fiscal logo to which the application possesses the access,

Line No 1...Line No 3

Content of additional lines,

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error (wrong number of positions),
- 5: printer's RTC clock readout error,
- 6: error of operation on fiscal memory,
- 40: lack of the header in RAM (only in fiscal mode),
- 94: blockage of sale because of putting service switch

Remarks:

1. Collecting this sequence by the printer, unlike in cases of previous facilities, does not lead to printing the header. Only the PAR and CMD bits are fixed (providing the command was correctly realized).
2. Vivo Apteka printer possesses a limit of lines up to 80. If a necessity of printing a receipt arises, one should use the „On-Line” mode.
3. Older printers do not possess „Off-Line” receipt buffer.
4. Quarto printers can print the same quantity of receipt lines in „Off-Line” and „On-Line” modes.
5. The provided discounts are counted as receipt lines.
6. If in the time of 30 minutes since the receive of the described sequence the printer does not receive any other sequence than the software reset the PAR bit (cancelling the transaction mode without printing the information).
7. The printer prints additional lines depending on configuration fixes in Administration Mode (see Configuration of printers' work – Administration mode.)

Where:

Line number

0 or 1...255 , if = 0 than STORNO operation,

Kind of discount

- 0: none,
- 1: amount discount,
- 2: percentage discount,
- 3: amount overhead,
- 4: percentage overhead,

Discount description

- 0: no description,
- 1: „special”,
- 2: „occasional”,
- 3: „opportunity”,
- 4: „holiday”
- 5: „permanent customer”,
- 6: „anniversary”,
- 7: „birthday”,
- 8: „for the employee”,
- 9: „promotion”,
- 10: „gift”,
- 11: „sell-out”,
- 12: „re-pricing”,
- 13: „seasonable”,
- 14: „night”,
- 15: „service”,
- 16: defined by the user (sent in field “Discount name”)

Name*

Name of commodity. Printer's software:

- Changes coming letters into capital ones for stock base control (small and capital letters are not distinguished),
- prints small and capital letters together with prohibited characters,

Maximum length of commodity name depending on fiscal printer model:

- Bono Online 1.10: 40 characters
- Bono Online 210: 60 characters
- Deon Online 1.40: 40 characters
- Deon Online 220: 60 characters
- HD Online 1.60: 60 characters
- HD Online 210: 60 characters
- HD ONLINE 320: 60 characters
- HD II ONLINE 1.40: 60 characters
- HD II ONLINE 2.20: 60 characters

PLU code

PLU code of goods can consists of numerical signs and/or 3 text signs. PLU code can be printed on receipt as:

- text, in that field should appear pure text with code (e.g. "1234567890123")
- barcode if text is preceded with character „#” (e.g. „#1234567890123")
- qrcode, if text is preceded with character „@” (e.g. „@1234567890123")

Quantity

meets the same requirements as **Price** but in the “quantity” range all other characters, not only digits, are allowed. The printer distinguishes from this inscription a sequence, being a maximally 10-digits-long number with optionally fixed ten and prints only the number determining the quantity.

PTU

Character code of PTU rate = ‘A’...‘F’ + ‘Z’ or ‘G’ . The printer uses symbols of rates from A to G while each of these rates may be free. Using the Z or ‘ ’ (space) character for signing free commodities is allowed if one free rate was defined in the printer. If more than one free rate was defined the printer will report error No 18,

Price

Gross **price** per unit, given with 1 grosz (cents) accuracy; the format includes up to 10 digits with a precision up to two digits after the point. This format is controlled and printed with a compression of non-meaning zeros before the point, while after the point the compression of non-meaning zeros is not conducted,

Gross

Gross amount of sale, up to 10 digits, > 0,

Discount

amount or percent of discount /overhead. The following limitations are binding:

- the percent has to be from the range 0,01...99.99 %,
- in case of amount discount, allowing the discount may not lead to negative result. Not meeting the above limitations leads to error #20,

Name of discount

If the parameter Discount description is 16, this text is printed on the receipt as the name of the discount.

Goods description

It appears if „goods description” parameter = 1. Goods description can occupy max. 3 lines of text reduced with length of descriptor „description”. Amount of printed text depends on printer’s type (quantity of characters in the line).

Errors’ codes:

- 1: not initiated printer’s clock,
- 2: control byte error,
- 4: wrong number of line (parameter error PI),
- 16: wrong name (empty or too long),
- 17: wrong signing of quantity (empty or too long),
- 18: error caused by:
 - wrong signing of VAT rate (or lack of such one),
 - wrong signing of free rate (‘ ’ or ‘Z’) in case if in the printer there are > 1 free rates or the free rate was not defined,
 - trial to sell in inactive rate,
 - performance of the mechanism of control of stock base,
- 19: error in Price value (syntax, range or none),
- 20: 1. error of gross value or discount (syntax, range or none),
2. error of not meeting the condition: quantity x price = value – the printer checks the correctness of the sent information in accordance with the algorithm:
 - it multiplies the price and the number ‘caught’ from the quantity,
 - it rounds off the result of multiplying up to two digits after the point,
 - compares the result of rounding off with the value (gross),
 - in case of amount discount, providing the discount must not lead to negative result (not meeting the above leads to error #20),
- 21: sequence received by the printer at transaction mode set off,
- 22: error of STORNO operation (e.g. trial to performance in ‘block’ OFF-LINE mode or if as the result of its performance the sum in the given tax group becomes negative) or an error of the operation on the discount, e.g. the value of the commodity, after providing the discount, becomes negative,
- 90: operation only on securities, it is not possible to send commodities by the described sequence
- 91: the form of payment was sent, it is not possible to send commodities by the described sequence,

Remarks:

1. Lines’ numeration has to be continuous, also if the STORNO operation is performed, the sequence of numbers 1,2,3,4 is correct, but there has to be: 1,2,0,4 if the STORNO operation is performed.
2. If the receipt is printed in ‘block’ mode (see the parameter Quantity of positions in the sequence beginning of transaction_is (0) than the previously declared lines’ number has to be received.

3. Providing a discount for a position bases on subtracting the discount amount against the Gross amount which is sent directly or derives from a fixed percentage rate.
4. The STORNO operation has to be controlled by an application, so that the price and quantity of commodities moved from the list correspond with each other. Moreover, an optional discount should be provided during storning.
5. The „time-out" concept was introduced for the receipt, meaning that in case of not finishing the printing of the receipt in 30 minutes since the moment of its starting, the printer cancels the transaction, at the end inscription the message:

RECEIPT CANCELLED

3.16. Blocking goods during sale.

For different devices there are used different methods of goods blocking:

- 1) For HDe printer

Printer allows to make up to 32 tax rate changes on each article. After exceeding this limit the printer blocks the possibility of tax rate change reporting tax error. However, sale of that article with previous tax rate will still be possible.

- Goods control is conducted as for the name and tax rate;
- Name control is conducted in the way that all letters in article name are changed for capital letters, all signs apart from alphanumerical ones and comma, dot and slashes are deleted from the name. Such converted name is verified. Example: BEER, beer, Beer%, bEEr etc. is still the same name. However, if to the name will be added one letter or digit , then it would be treated as another article;
- Tax rate control is conducted as for the rate value, not for the letter which distinguishes the particular tax rate.

- 2) For the rest of printers

Fiscal printer, as opposed to cash register, controls selling goods and assigned to them tax rates. It is controlled during sale if there wasn't done a tax step on particular article.

Rule of the tax step acting:

After decreasing a tax step on particular article you cannot increase it again.

Example: if article (eg. Beer) was sold once with tax rate (eg. 7%) you can change it for 22% and still sell, you can also decrease tax rate to 0% and still sell. However, if you decrease to 0% and then you try sell this product with rate 7% or 22% , then the printer would block selling this article and reports an error.

You can decrease tax rates many times, increase them also, as well as decrease after increasing but you must remember - YOU CANNOT INCREASE TAX RATE IF YOU HAD DECREASED IT EARLIER.

- Goods control is conducted as for the name and tax rate.
- Name control is conducted in his way that all letters in article name are changed for capital letters, all signs apart from alphanumerical ones and comma, dot and slashes are deleted from the name. Such converted name is verified. Example: BEER, beer, Beer%, bEEr etc. is still the same name. However, if to the name will be added one letter or digit , then it would be treated as another article.
- Tax rate control is conducted as for the rate value, not for the letter which distinguishes the particular tax rate.

So, if you sell two articles with identical name but with different tax rates, the fiscal printer after selling article with higher rate and then with lower rate would block possibility of selling article with higher rate.

3.16.1. Operating deposit in the receipt line.

| No | Field name | Content | Separator | Size | Remarks |
|----|-----------------------------|--------------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Kind of deposit (container) | 6, 7, 10, 11 | | 1..2 | |
| 3 | Command | \$I | | 2 | |

| | | | | | |
|----|--------------|-------------|------|-------|-------------------|
| 4 | Number | Inscription | <CR> | 0..4 | Optional argument |
| 5 | Quantity | Inscription | <CR> | 1..16 | Optional argument |
| 6 | Constant | P | / | 1 | |
| 7 | Price | Number | / | 1..11 | |
| 8 | Value | Number | / | 1..11 | Argument ignored |
| 9 | Control byte | 00..FF | | 2 | |
| 10 | | <ESC>\ | | 2 | |

Where:

Kind of deposit

- 6: taken deposit
- 7: storno (reversal) of received deposit
- 10: deposit given
- 11: storno (reversal) of given deposit

Number

Number of the package from the range 0..9999. It is an optional argument. If it appears the printer prints the inscription „Returnable package No", while if there is no than only „Returnable package"

Quantity

It is an optional argument. If it appears the numeric part will be separated from it and printed as quantity.

Price

price of the package,

Value

Ignored argument – it has to be sent only in order to keep the format of command \$!,

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 18: constant value error (other than P)

3.16.2. Taken deposit (for selling the package).

| No | Field name | Content | Separator | Size | Remarks |
|----|--------------|-------------|-----------|-------|---------------------|
| 1 | | <ESC>P | | 2 | |

| 6 | Control byte | 00..FF | | 2 | |
| 7 | | <ESC>\ | | 2 | |

Where:

Amount

deposit amount (for taken packages),

Package No

package number. In the current version a number from the range 1..127:

- the printer always prints the text „Returnable package No",
- if the „Package No" parameter was not provided, the following number is printed, increased after each approval of the sequence,

Quantity

the quantity of the package. The printer separates from the sent sequence the numeric value, which is then printed,

- if it appears than the information about quantity and price per package (calculated as price = Amount / quantity) are provided on the receipt,
- if it does not appear the printer assumes that quantity = 1 and price = Amount.

Errors' codes:

- 2: control byte error,
- 4: parameter error,
- 9: I/O operation error,
- 17: wrong quantity signification (too long) or exceeded number of packages (max 32) or range exceeded for Package No = 1.. 127,
- 19: error in amount value (syntax, range or none),
- 21: sequence received by the printer at transaction mode set off.

3.16.3. Storno (reversal) of taken deposit.

- 1: positive compliance of the transaction,

Discount

optional percentage discount for the whole transaction. This parameter is ignored when the discount is defined by **Kind of discount** and **Value of discount** fields

Quantity of lines

quantity of additional lines localized at the foot note of the receipt, after the fiscal logo, access to which is possessed by the application,

Ending

Value of the parameter is ignored. They appear in order to keep compatibility with POSNET printers.

Kind of discount

- 0: none,
- 1: percentage discount,
- 2: percentage overhead,

Cashier name

the field is ignored if cashier's log-in took place earlier.

Line No 1...Line No 3

Content of additional lines.

Payment

Amount paid by the customer, when = 0 than inscriptions „payment/ rest” will not be printed,

Total

total charge for the customer, for control of the previous transfers,

Discount value

discount or percentage overhead for the whole transaction, the rate is fixed at the accuracy to 0.01 if the kind of discount parameter ≠ 0,

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error (Action, Discount, Quantity of lines, Ending or Kind of discount),
- 5: printer's clock operation error,
- 6: error of operation on fiscal memory,

- 23: wrong number of records (lines) of receipt,
 24: overfilling the buffer of receipt printer,
 25: wrong terminal/ cashier code (wrong length or format) or wrong content of additional lines,
 26: wrong amount of Payment (syntax; if the difference Payment - Total ≤ 0 than 'cash', 'rest' inscriptions will not be printed),
 27: wrong total sum Total or wrong Discount amount,
 28: overfilling the totalizer (max 99 999 999,99 for one tax group),
 29: demand for (positive) finishing the transaction mode when it has not been set on yet,

Remarks:

1. If the kind of discount parameter $\neq 0$ than the value of discount parameter is ignored.
2. The printer prints these lines depending on configuration fixes in Administration Mode (see configuration of the work of the printers – Administration mode).

3.16.8. Approval of transaction with forms of payment (1).

| No | Field name | Content | Separator | Size | Remarks |

Where:

Ignored

ignored parameter,

Kind of discount

0: none,

1: percentage discount,

2: percentage overhead,

Payment flag

0: payment amount is ignored (payment in cash does not take place),

1: payment in cash takes place,

Card flag

0: card amount is ignored (payment by card does not take place),

1: payment by card takes place,

Cheque flag

0: cheque amount is ignored (payment by cheque does not take place),

1: payment by cheque takes place,

voucher flag

0: voucher amount is ignored (payment by voucher does not take place),

1: payment by voucher takes place,

Receive flag

0: receive amount is ignored (printer calculates proper value),

1: printer receives the sent value,

Giving back flag

0: the amount given back is ignored (printer calculates proper value),

1: printer receives the sent value,

Change flag

0: rest amount is ignored (printer calculates proper value),

1: printer receives the sent value,

Total

total charge for the customer, for control of the proper transfers (this value is controlled by the printer),

Discount

amount or percent discount for the while transaction, amount or rate fixed with an accuracy at up to

0.01 if the kind of discount parameter $\neq 0$,

Payment

amount paid by the customer,

Card, Cheque, Voucher

amounts for proper forms of payment,

Receive

amount of the deposit for return package, increasing the charge amount (i.e. decreasing the sum of forms of payment),

Giving back

The amount of deposit for returned returnable package, decreasing the charge amount (i.e. increasing the sum of forms of payment),

Line No 1...Line No 5

Content of additional lines,

Name of card, Name of cheque, Name of voucher

additional signification of forms of payment

Cashier name

the field is ignored if cashier's log-in took place earlier

Errors' codes:

1: not initiated printer's clock,

2: control byte error,

4: parameter error (Quantity of lines, Ending or Kind of discount),

5: printer's clock operation error,

6: error in operation on fiscal memory,

23: wrong number of records (lines) of receipt,

24: overfilling of printer's buffer,

25: wrong terminal/ cashier's code (wrong length or format) or wrong content of additional lines,

26: error of one of amounts Pay in/Change

27: wrong total sum Total or wrong Discount amount,

28: overfilling of the totalizer,

29: demand for (positive) finishing transaction mode when it was not set on yet,

83: wrong deposit value.

3.16.9. Different forms of payments managing.

| No | Field name | Content | Separator | Size | Remarks |
|----|-----------------|-------------|-----------|-------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Action | 1..2 | ; | 1 | |
| 3 | Type of payment | 0..10 | | 1 | |
| 4 | Command | \$b | | 2 | |
| 5 | Amount | Number | / | 1..11 | |
| 6 | Name | Inscription | <CR> | 0..24 | |
| 7 | Control byte | 00..FF | | 2 | |
| 8 | | <ESC>\ | | 2 | |

Where:

Action

1: Amount causes registration of the form of payment, increasing the sum of additional payments in the given type of payments.

2: Amount causes cancellation of the form of payment, decreasing the sum of additional payments in the given type of payments.

Type of payment

0: CASH,

1: CARD,

2: CHEQUE,

3: PURCHASE VOUCHER,

4: OTHER,

5: CREDIT,

6: CUSTOMER'S ACCOUNT,

7: CURRENCY (NOVITUS protocol), VOUCHER ("Novitus accordable" protocol)

8: TRANSFER

9: mobile

10:voucher

Name

name of the form of payment,

Amount

Amount of the form of payment.

Errors' codes:

1: not initiated printer's clock,

2: control byte error,

4: parameter error (Action or Type of payment),

5: printer's RTC clock operation error,

6: error in operation on fiscal memory,

19: error in code value (syntax, range or none),

22: cancellation error (Action = 2) of the form of payment (the declared „cancellation” amount is higher than the so-long-existing amounts sent from Action = 1),

26: the limit of maximal quantity of payment forms of payment was exceeded (16).

3.16.10. Approval of transaction with forms of payment (2).

| No | Field name | Content | Separator | Size | Remarks |
|----|-------------------------------|---------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |

| 33 | | <ESC>\ | | 2 | |

Where:

Quantity of lines

quantity of additional lines localized at the foot note of the receipt, after the fiscal logo, access to which is possessed by application 0...3, these lines are printed in the nearest daily report; between daily reports, one set of additional lines may be sent which will be printed while all other sets of lines will be ignored,

Ending

Parameter value other than 3 is ignored. When the parameter is 3 than:

- if, during the transaction, receives of the deposit were sent, 1 received deposit shall be sent
 - name and quantity – empty inscriptions (only <CR> separators)
 - the sum of all received securities sent in the transaction shall be sent as the deposit amount
- if, during the transaction, returns of the deposit were sent, 1 returned deposit shall be sent
 - name and quantity – empty inscriptions (only <CR> separators)
 - the sum of returned securities sent in the transaction shall be sent as the deposit amount
- if, during the transaction, forms of payment were sent, the amount of Payment shall be sent
 - as the amount of Payment there shall be sent the sum of all forms of payment sent in transaction
- if the discount/ overhead was sent during the transaction, the discount/ overhead sent in command \$y has to correspond with discount/ overhead sent in command \$n
- do not send lines 1, 2, 3
- do not send forms of payment

After such modification, command \$y shall not be longer than 200 bytes.

Summary

1: if it is only possible in one group, print the shortened summary,

DSP character

1: Negative DSP amount,

The parameter value is ignored. It appears in order to keep compatibility with “NOVITUS accordable” printers.

Kind of discount:

0: none,
1: percentage discount,
2: percentage overhead,
3: amount discount,
4: amount overhead,

Quantity of taken deposits

0: „Taken deposits” block does not exist,
1..n: „Taken deposits” block is printed and includes 1.. n lines + title,

Quantity of returned deposits

0: „Returned deposits” block does not exist,
1..n: „Returned deposits” block is printed and includes 1.. n lines + title,

System number flag

1: A System number sequence appears,
0: A System number sequence does not appear

Quantity of payment forms

0: there are no forms of payment, the block of names forms of payment does not appear,
1..n: the parameters of type of payment appear, determining various kinds of payments, the block of names of forms of payments appears,

Change flag

0: change amount is ignored,
1: change amount is printed,

Payment flag

0: payment amount is ignored (payment of cash does not take place),
1: payment of cash takes place,

Type of payment

1: the amount of payment by a card is printed,
2: the amount of payment by a cheque is printed,
3: the amount of payment by a bond is printed,,
4: the amount of payment in other form is printed,,
5: the amount of payment by a credit is printed,,
6: the amount of payment from customer’s account is printed,
7: the amount of payment by foreign currency is printed (or *voucher in case of “NOVITUS accordable” protocol),
8: the amount of payment by a transfer is printed (or currency in case of “NOVITUS accordable” protocol)

Cash register number

name of the cash register,

Cashier

name of the cashier,

Line

Content of additional lines,

System number

system number of the transaction (digits only),
system number digits preceded by '#' are printed as a bar code (it concerns: Delio printer)
From printer Delio 4.0 in order to print QR code in place of system number, characters string must be preceded by a '@'. In this case the field takes up to 120 characters.

Name of the form of payment

additional signification of forms of payment

Number of taken deposit, Number of returned deposit

number of secured package,

Total

total charge from the customer, for the control of the previous transfers – this value is controlled by the printer. Total amount is the sum of all receipt lines, corrected by the amount or value of discount/overhead (value / discount amount / overhead declared in the ending has no influence on any of the values sent in this sequence and will be calculated by the printer – the similar situation is in the sequence of receipt line).

DSP

Parameter value is ignored. It appears in order to keep compatibility with “NOVITUS accordable” printers.

Discount

Amount or percentage discount for the whole transaction, amount or rate is fixed at an accuracy up to 0.01 if the kind of discount parameter $\neq 0$,

Payment

payment in cash. The Payment field would be equal to DSP in case if the DSP value was positive. In other case, the Payment field shows zero. If there were no forms of payment, the payment field has to be calculated (the required parameter Payment flag = 0); the printer will do it instead of us.

Forms of payment amount

Amounts for proper forms of payment (now in case if the quantity of forms of payment $\neq 0$),

Change

payment in cash. The Change field would be equal to DSP in case if the DSP value was negative, but this field can always be automatically calculated by the printer (Change flag = 0) and its service is not required, unless for controlling reasons.

Taken deposit amount

Amount of the deposit for returnable packages taken by the customer (in case that the quantity of received securities $\neq 0$),

Returned deposit amount

Amount of the deposit for returnable packages returned by the customer (in case that the quantity of returned securities $\neq 0$),,

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error,
- 5: printer's RTC clock operation error,
- 6: error of operation on fiscal memory,
- 23: wrong number of records (lines) of receipt,
- 24: overfilling of printer's buffer,
- 25: wrong terminal/ cashier's code (wrong length or format) or wrong content of additional lines,
- 26: error of one of amounts pay in/change
- 27: wrong total sum Total or wrong Discount amount,
- 28: overfilling of the totalizer,
- 29: demand for (positive) finishing transaction mode when it was not set on yet,

Remarks:

- 1. Received deposits, returned deposits, forms of payment can be used in two forms. In connection with the sequences of turnover of packages, forms of payment sent during realization of transactions, thanks to what values and texts on the display change currently, together with the actual packages or finalization of transactions with the appliance of various forms of payment.
- Received and returned deposits, forms of payment are declared only in receipt ending sequence. Values of deposits and packages sent in the ending „overwrite” the values sent during realization of the transaction (the last ones are ignored then).
- 3. The following fields:
 - lines 1..3,
 - names of forms of payment,
 - numbers of taken deposits,
 - quantity of taken deposits,

- numbers of returned deposits,
- quantity of returned deposits,
- amounts of forms of payments,
- amounts of taken deposits,
- amounts of returned deposits,

do not appear in the sequence at all (their terminators do not appear there either) if the value of byte parameter corresponding with them is zero.

Other fields :

- system number,
- discount,
- payment,
- change,

have to appear, even if the byte parameters corresponding to them is 0. Values included in these fields will be ignored by the printer.

3.16.11. Discount / overhead during transaction.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|-------------|-----------|-------|---------------------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Kind | 0..4 | | 1 | |
| 3 | Command | \$n | | 2 | |
| 4 | Name | Inscription | <CR> | 0..20 | |
| 5 | Value | Number | / | | Percent or quota discount |
| 6 | Control byte | 00..FF | | 2 | |
| 7 | | <ESC>\ | | 2 | |

Where:

Kind

- 0: no discount / overhead, cancelling the previously provided discount / overhead and all forms of payment,
- 1: percentage discount
- 2: percentage overhead
- 3: amount discount
- 4: amount overhead

Errors' codes:

- 1: not initiated printer's clock,
- 4: parameter error,
- 21 : transaction mode set off or turnover of securities only,
- 26 : error in discount value,
- 82 : discount/ overhead already sent previously.

Remarks:

- 1. Command should be sent in the transaction before command \$b and before command \$y.

3.16.12. Discount / overhead for a group of goods in a given VAT rate.

| No | Field name | Content | Separator | Size | Remarks |
|----|-----------------------|---------------|-----------|-------|--------------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Number of rate | 0..6 | ; | 1 | |
| 3 | Kind of discount | 0..4 | ; | 1 | |
| 4 | Number of description | 0..16 or none | | 0..2 | Optional parameter |
| 5 | Command | \$L | | 2 | |
| 6 | Sale | Number | / | 1..11 | |
| 7 | Discount | Number | / | 1..11 | |

| | | | | | |
|----|-------------------------|-------------|------|-------|-------------------|
| 8 | Description of discount | Inscription | <CR> | 0..20 | Optional argument |
| 9 | Control byte | 00..FF | | 2 | |
| 10 | | <ESC>\ | | 2 | |

Where:

Number of VAT rate

- 0: A
- 1: B
- 2: C
- 3: D
- 4: E
- 5: F
- 6: G

Kind of discount

- 1: percentage discount
- 2: percentage overhead
- 3: amount discount
- 4: amount overhead

Number of description

- 0: no description
- 1: „special”
- 2: „occasional”
- 3: „opportunity”
- 4: „holiday”,
- 5: „permanent customer”,
- 6: „anniversary”,
- 7: „birthday”,
- 8: „for the employee”,
- 9: „promotion”,
- 10: „gift”,
- 11: „sale”,
- 12: „re-pricing”,
- 13: „seasonable”,
- 14: “night”
- 15: “service”
- 16: defined by the user

Sale

The value of the sale in a rate defined before discount/ overhead

Discount value

Value of discount/ overhead

Discount description

Name of discount/ overhead

Errors' codes:

- 1: not initiated printer's clock,
- 4: parameter error,
- 21 : transaction mode set off or turnover of deposits only,
- 26 : error in discount value,
- 82 : discount/ overhead already sent previously.

Remarks:

The sequence leads to printing information about providing a discount/ overhead to the sub-total as well decreasing/ increasing the totalizer in the specified rate. Discount cannot lead to empty totalizers.

3.16.13. Discount / overhead to the sub-total receipt.

| No | Field name | Content | Separator | Size | Remarks |
|----|-----------------------|---------------|-----------|------|--------------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Kind of discount | 0..4 | ; | 1 | |
| 3 | Number of description | 0..16 or none | | 0..2 | Optional parameter |

| | | | | | |
|---|-------------------------|-------------|------|-------|-------------------|
| 4 | Command | \$Y | | 2 | |
| 5 | Sub-total | Number | / | 1..11 | |
| 6 | Discount | Number | / | 1..11 | |
| 7 | Description of discount | Inscription | <CR> | 0..20 | Optional argument |
| 8 | Control byte | 00..FF | | 2 | |
| 9 | | <ESC>\ | | 2 | |

Where:

Kind of discount

- 0: none
- 1: percentage discount
- 2: percentage overhead
- 3: amount discount
- 4: amount overhead

Number of description

- 0. no description
- 1. „special”
- 2. „occasional”
- 3. „opportunity”
- 4. „holiday”,
- 5. „permanent customer”,
- 6. „anniversary”,
- 7. „birthday”,
- 8. „for the employee”,
- 9. „promotion”,
- 10. „gift”,
- 11. „sale”,
- 12. „re-pricing”,
- 13. „seasonable”,
- 14. “night”
- 15. “service”
- 16. defined by the user

Sub-total

Value of the sale without deposit before discount / overhead

Discount value

Percentage value of discount/ overhead

Discount description

Name of discount/ overhead

Errors' codes:

- 1: not initiated printer's clock,
- 4: parameter error,
- 21 : transaction mode set off or turnover of securities only,
- 26 : error in discount value,
- 82 : discount/ overhead already sent previously.

Remarks:

The sequence leads to printing information about providing a discount/ overhead to the sub-total as well decreasing/ increasing the totalizer in the specified rate. Discount cannot lead to resetting of totalizers.

3.17. Additional lines on the receipt after the fiscal logo.

This command may be used only when the command [approval of the transaction with the forms of payment \(2\)](#) was applied to finish this program with a parameter End = 3.

3.17.1. Lines of packages' returns.

| No | Field name | Content | Separator | Size | Remarks |
|----|-----------------|---------------------|-----------|-------|---------------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant | 8 | | 1 | |
| 3 | Command | \$z | | 2 | |
| 4 | Name of package | 0..65535 or none | <CR> | 0..5 | Optional arguments. |
| 5 | Quantity | Inscription or none | <CR> | 0..8 | |
| 6 | Amount | Number | / | 1..11 | |
| 7 | Control byte | 00..FF | | 2 | |
| 8 | | <ESC>\ | | 2 | |

Where:

Name of packaging

Number of packaging (number from the area 0..65535),

Quantity

inscription including quantity of returned packages. The quantity is subjected to identical limitations with the quantity of commodities sent in the receipt line,

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error
- 5: printer's RTC clock readout error,
- 82: prohibited command in transaction with \$z,
- 83: the quantity of the amount for package is wrong.

Remarks:

1. A line is printed: return of a package
return of a package <Name of a package> amount
2. The command can be repeated many times.
3. The amount has to correspond with the amount of packages sent in the transaction. In case of a trial to exceed the amount an error will be reported and in case of too low amount a line will be printed:
Returnable package 1x Remained amount Remained amount
4. The command has to be sent after command \$y.

3.17.2. Lines of packages' receives.

| No | Field name | Content | Separator | Size | Remarks |
|----|-----------------|------------------|-----------|-------|-------------------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant | 4 | | 1 | |
| 3 | Command | \$z | | 2 | |
| 4 | Name of package | 0..65535 or none | <CR> | 0..5 | The field can be empty. |
| 5 | Quantity | Inscription | <CR> | 0..8 | |
| 6 | Amount | Number | / | 1..11 | |
| 7 | Control byte | 00..FF | | 2 | |
| 8 | | <ESC>\ | | 2 | |

Where:

Name of packaging

Number of packaging (number from the area 0..65535),

Quantity

inscription including quantity of received packages. The quantity is subjected to identical limitations with the quantity of commodities sent in the receipt line,

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error
- 5: printer's RTC clock readout error,
- 82: prohibited command in transaction with \$z,
- 83: the quantity of the amount for package is wrong.

Remarks:

1. A line is printed: receive of a package
 - return of a package <Name of a package> Amount
2. The command can be repeated many times.
3. The amount has to correspond with the amount of packages sent in the transaction. In case of a trial to exceed the amount an error will be reported and in case of too low amount a line will be printed:

Returnable package 1x Remained amount Remained amount

4. The command has to be sent after command \$y.

3.17.3. Forms of payment settlement.

| No | Field name | Content | Separator | Size | Remarks |
|----|--------------|------------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |

Text

Inscription sent from application,

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error
- 5: printer's RTC clock readout error,
- 84: exceeded number of sent lines of predefined inscription of various content. The sum of the sent predefined inscriptions and additional information lines in Vento printer must not exceed 25 and in the rest of printers 3 between two daily reports.

Remarks:

- 1. Numeric parameters can include maximally 3 digits (exceeding ones will be changed to spaces).
- 2. Letter parameters can include maximally 3 digits (exceeding ones will be changed to spaces).
- 3. The command has to be sent after \$y command.
- 4. In case of lines printed with a larger font and setting the larger font in the printer options (HD printers), the number of characters per line will be limited to 22

3.17.5. Information lines – definition.

| No | Field name | Content | Separator | Size | Remarks |
|----|-------------------|-------------|-----------|--------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant | 24 | ; | 2 | |
| 3 | Quantity of lines | 0..3 | | | |
| 4 | Command | \$z | | 2 | |
| 5 | Line No 1 | Inscription | <CR> | 0..64* | Quantity of these arguments is the same as given in Quantity of lines |
| 6 | Line No 2 | Inscription | <CR> | 0..64* | |

| | | | | | |
|---|--------------|-------------|------|--------|--|
| 7 | Line No 3 | Inscription | <CR> | 0..64* | parameter * - 64 characters for HD, wide paper, normal font, - 44 characters for HD, wide paper, enlarged font - 44 characters for HD, narrow paper, - 42 characters for Bono Online, Deon Online, |
| 8 | Control byte | 00..FF | | 2 | |
| 9 | | <ESC>\ | | 2 | |

Where:

Quantity of lines

Quantity of defined lines – from 0 to 3

Line No 1, 2, 3

Texts of defined lines

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error
- 5: printer's RTC clock readout error

Remarks:

- 1. Information lines „We invite you to further visits” are printed.
- 2. It is possible to define only one set of information lines between daily reports.
- 3. Such defined information lines are printed after receiving the \$z command ending the printout (described below).
- 4. The command has to be sent after the \$y command.

3.17.6. Payment in EURO.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|---------------------|------------|-----------|-------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant | 99 | ; | 2 | |
| 3 | Amount of arguments | 5 | | 1 | Amount of arguments sending with that packet. Warning! The field is required in case of using argument „Change in zł” |
| 4 | Command | \$z | | 2 | |
| 5 | € currency | Number | <CR> | 1..11 | If zero value is given, payment in € will be cancelled |
| 6 | Receipt value in € | Number | <CR> | 1..11 | The value shall also include various returnable packages |
| 7 | Payment in € | Number | <CR> | 1..11 | |
| 8 | Change in € | Number | <CR> | 1..11 | |
| 9 | Change in PLN [zł] | Number | <CR> | 1..11 | |
| 10 | Control byte | 00..FF | | 2 | |
| 11 | | <ESC>\ | | 2 | |

Where:

€ currency, Receipt value in €, Payment in €, Rest in €, Rest in PLN [zł]
Numeric values

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error
- 5: printer's RTC clock readout error

Remarks:

The command is sent in transaction mode.
 Text including € currency is printed after the „€: currency” label
 The receipt value in € currency is printed after the label „To be paid” and is preceded by the € symbol
 Payment in € is printed after the label „Cash:,” and is preceded by the € symbol
 Rest in € is printed after the label „Rest:,” and is preceded by the € symbol
 Rest in PLN [zł] is printed after the label „Rest:,”
 The command has to be sent before the \$y command.
 On the displays, the amounts in € are preceded by the text „EUR” (on the customer's display only if it is an LCD display). Additionally, the amount in € is blinking on customer's display.
 There must „Amount of arguments” parameter appear as the second parameter, in order to the last argument (Change in zł) could be interpreted by the printer.

3.17.7. Buyer's ID .

| No. | Field name | Content | Separator | Size | Remarks |

| 17 | Buyer's name | Inscription | <CR> | 1..40 | |
| 18 | Seller's name | Inscription | <CR> | 1..40 | |
| 19 | Payment | Number | / | 1..11 | |
| 20 | Total | Number | / | 1..11 | |
| 21 | Discount value | Number | / | 1..5 | |
| 22 | Control byte | 00..FF | | 2 | |
| 23 | | <ESC>\ | | 2 | |

Where:

Action

- 0: cancelling receipt,
- 1: positive transaction ending,

Discount

Optionally percentage discount for the whole transaction. That parameter is ignored when discount is defined with fields **Discount type** and **Discount value**

Amount of lines

Amount of additional lines placed in the receipt's footer after fiscal logo to which application has access,

Ending

Parameter's value is ignored. It exists in purpose of keeping compatibility with NOVITUS accordable fiscal printers.

Discount type

- 0: no discount,
- 1: percentage discount,
- 2: percentage overhead,

Code

Code of cash register (1 sign) + code of cashier (2 signs), the field is ignored if earlier was [cashier's log-in](#).

Line no 1...Line no 3

Content of additional lines.

Payment

Amount paid by the customer, if = 0, than inscriptions „payment / change” will not be printed.

Total

Total charge for the customer, for controlling the previous transfers,

Discount value

Percentage discount or overhead for the whole transaction, the rate is required with accuracy to 0.01, if parameter Discount type ≠ 0,

Error's codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error
- 5: printer's RTC clock readout error
- 6: error of operation with fiscal memory,
- 23: wrong amount of records (lines) of the receipt,
- 24: overfilling of receipt's printer buffer,
- 25: wrong code of terminal/ cashier (wrong length or format), or wrong content of additional lines,
- 26: wrong amount of Payment (syntactic; if difference Payment - Total ≤ 0, than inscriptions 'cash', 'change' will not be printed),
- 27: wrong total sum Total or wrong amount of Discount,
- 28: overfilling of totalizer (max 99 999 999,99 for the single tax group),
- 29: demand of (positive) ending of transaction mode, in moment when it wasn't switched on yet.

3.19.2. Order of setting invoice options. (@c)

| No. | Field name | Content | Separator | Size | Remarks |
|-----|-----------------------------|---------|-----------|--------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Amount of additional copies | 0..9 | ; | 1 or 3 | 255 – only original |

| 22 | Buyer's name | Text | <CR> | 0..256 | Text printed in invoice header. Text modifiers operated (accessible since HD Online). |
| 23 | Control byte | 00..FF | | 2 | |
| 24 | | <ESC>\ | | 2 | |

Error's codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error

3.19.3. Additional lines of invoice's footers. (\$z)

The order should be sent after order of invoice beginning.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|-------------|-----------|-------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant | 20 | ; | 2 | |
| 3 | Footer type | 0..131 | | | |
| 4 | Command | \$z | | 2 | |
| 5 | Text | Inscription | <CR> | 0..25 | |
| 6 | Control byte | 00..FF | | 2 | |
| 7 | | <ESC>\ | | 2 | |

Where:

Footer type

- 130: Tax numerical argument
- 131: Information about invoice 3 lines of text

In invoices can also be applied receipt's footers used in printing receipts.

Error's codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error
- 5: printer's RTC clock readout error,
- 84: exceeded number of sent lines of predefined inscription of various content. The sum of the sent predefined inscriptions and additional information lines must not exceed 25 between two daily reports.

Remarks:

- 1. On one receipt can be printed 20 additional lines.
- 2. Numeric parameters can include maximally 3 letters (exceeding ones will be changed to spaces).
- 3. Letter parameters can include maximally 3 digits (exceeding ones will be changed to spaces).
- 4. The command has to be sent after \$y command.

3.20. Orders of cash register and cashier operating.

3.20.1. Log-in the cashier.

| No | Field name | Content | Separator | Size | Remarks |
|----|------------|----------------|-----------|------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Action | 0..255 or none | | 1 | 0 or none – cashier log-in 1 – cashier logged-in readout |

| | | | | | |
|---|----------------------|-------------|------|-------|--|
| 3 | Command | #p | | 2 | |
| 4 | Cashier | Inscription | <CR> | 0..32 | |
| 5 | Cash register number | Inscription | <CR> | 0..8 | |
| 6 | Control byte | 00..FF | | 2 | |
| 7 | | <ESC>\ | | 2 | |

Where:

Cashier

inscription reserved for cashier's name and surname,

Cash register number

inscription including the name of the cash register

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 5: printer's RTC clock readout error,
- 33: error in Cash register number inscription of (e.g. too long or including wrong characters),
- 34: error in Cashier inscription.

3.20.2. Readout of cashier status.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|---------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant | 1 | | 1 | |
| 3 | Command | #p | | 2 | |
| 4 | Control byte | 00..FF | | 2 | |
| 5 | | <ESC>\ | | 2 | |

Response:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|-------------|-----------|-------|---------------------------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | #P | | 2 | |
| 3 | Cashier | Inscription | <CR> | 0..32 | |
| 4 | ECR number | Inscription | <CR> | 0..8 | |
| 5 | Status | Number | / | 1 | 0 – not logged 1 – logged in |
| 6 | Control byte | 00..FF | | 2 | |
| 7 | | <ESC>\ | | 2 | |

Principles of cashier login / logout and printout of cashier information in the receipt footer:

- 1. The highest priority has the data of registered cashier.
- 2. If the order has dedicated fields for the cash register / cashier data, they will be printed if the cashier is not logged in.
- 3. If the order does not have dedicated fields for the cash register / cashier data or the fields are empty, then symbols of lack of cash register and no cashier will be printed in the footer: "0 K0".

3.20.3. Log-out the cashier.

| No | Field name | Content | Separator | Size | Remarks |
|----|----------------------|----------------|-----------|-------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Ignored | 0..255 or none | | 1 | |
| 3 | Command | #q | | 2 | |
| 4 | Cashier | Inscription | <CR> | 0..32 | |
| 5 | Cash register number | Inscription | <CR> | 0..8 | |

| | | | | | |
|---|--------------|--------|--|---|--|
| 6 | Control byte | 00..FF | | 2 | |
| 7 | | <ESC>\ | | 2 | |

Where:

Cashier

inscription reserved to cashier's name and surname,

Cash register number

inscription including the name of the cash register

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 5: printer's RTC clock readout error,
- 33: error in inscription of Cash register number (e.g. too long or including wrong characters),
- 34: error in inscription of Cashier.

3.20.4. Payment to the cash.

| No | Field name | Content | Separator | Size | Remarks |
|----|----------------------|----------------|-----------|-------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Parameter | 0..255 or none | | 0..3 | 0 – cash, 1 - card, 2 - cheque, 3 - Bond, 4 - other, 5 - credit, 6 – customer account, 7 - currency (protocol NOVITUS), Voucher (protocol „NOVITUS accordable”) 8 - transfer 9 - Mobile 10 - Voucher 99 – payment in € currency |
| 3 | Space for signature | 0 or 1 | | 1 | 0 – no space for signature, 1 – space for signature |
| 4 | Command | #i | | 2 | |
| 5 | Payment | Number | / | 1..11 | Amount paid to the ECR |
| 6 | Cash register number | Inscription | <CR> | 0..8 | Inscription contains ECR number. Optional parameter – replacing that introduced during cashiers log-in.. |
| 7 | Cashier | Inscription | <CR> | 0..32 | |
| 8 | Receipt number | Inscription | <CR> | 0..32 | Optional parameter |
| 9 | Payer name | Inscription | <CR> | 0..32 | Optional parameter |
| 10 | Payment description | Inscription | <CR> | 0..32 | Optional parameter. It concerns payment in foreign currency (7 - currency). It specifies currency name consisting of 3 capital letters. Designation must be different than current currency. If limitations are not met, parameter error will be reported. |
| 11 | Control byte | 00..FF | | 2 | |
| 12 | | <ESC>\ | | 2 | |

Where:

Payment

Amount paid into the cash register,

Cash register number

Inscription including cash register number,

Cashier

Inscription including cashier's name.

Receipt number

Optional parameter

Payer name

Optional parameter

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 30: error in the amount of Payment (syntax),
- 31: over-addition (exceeding the range of cash in the cash register).

3.20.5. Pay-out from the cash.

| No | Field name | Content | Separator | Size | Remarks |
|----|----------------------|----------------|-----------|-------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Parameter | 0..255 or none | ; | 0..3 | 0 – cash, 1 - card, 2 - cheque, 3 - Bond, 4 - other, 5 - credit, 6 – customer account, 7 - currency (protocol NOVITUS), Voucher (protocol „NOVITUS accordable”) 8 - transfer 9 - Mobile 99 – payment in € currency |
| 3 | Space for signature | 0 or 1 | ; | 1 | 0 – no space for signature, 1 – space for signature |
| 4 | Command | #d | | 2 | |
| 5 | Pay-out | Number | / | 1..11 | Amount paid off from ECR. |
| 6 | Cash register number | Inscription | <CR> | 0..8 | Inscription contains ECR number. |
| 7 | Cashier | Inscription | <CR> | 0..32 | Optional parameter – replacing that introduced during cashiers log- in.. |
| 8 | Receipt number | Inscription | <CR> | 0..32 | Optional parameter |
| 9 | Payer name | Inscription | <CR> | 0..32 | Optional parameter |
| 10 | Payment description | Inscription | <CR> | 0..32 | Optional parameter. It concerns payment in foreign currency (7 - currency). It specifies currency name consisting of 3 capital letters. Designation must be different than current currency. If limitations are not met, parameter error will be reported. |
| 11 | Control byte | 00..FF | | 2 | |
| 12 | | <ESC>\ | | 2 | |

Where:**Pay-out**

Amount paid from the cash register,

Cash register number

Inscription including cash register number,

Cashier

Inscription including cashier's name,

Receipt number

Optional parameter

Payer name

Optional parameter

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 30: error in the amount of Payment (syntax),
- 32: value after deducting becomes negative (cash register zero level is assumed in such case).

Remarks:

1. Printer supports maximum up to 16 different currencies. If the limit is exceeded, parameter error will be reported.

3.20.6. Inquiry about the possibility of selling goods.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|-----------------|-------------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | \$g | | 2 | |
| 3 | Goods name | Inscription | <CR> | | |
| 4 | Tax rate symbol | Inscription | / | 1 | |
| 5 | Control byte | 00..FF | | 2 | |
| 7 | | <ESC>\ | | 2 | |

In response, the printer sends back the order:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|-----------------|-------------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Ignored | 1 | None | 1 | Constant |
| 3 | Command | \$G | | 2 | |
| 4 | Result | Number | / | 1 | 0 – goods not blocked 1 – goods blocked |
| 5 | Tax rate symbol | Inscription | / | 1 | Tax rate symbol |
| 6 | | <ESC>\ | | 2 | |

3.20.7. In advance payment.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|-----------|-----------|----------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Action | number | ; | 1 | 0 – advance, 1 – advance calculating, 2 – STORNO / reversal of advance, 3 – STORNO / reversal of advance calculating |
| 3 | Command | @z | | 2 | |
| 4 | Goods name | text | <CR> | 0..60 | The name of the good to which the advance payment or settlement of the advance payment is provided. |
| 5 | Tax rate | letter | <CR> | 1 | |
| 6 | Value | Amount | / | Variable | Value of advance payment or advance payment settlement. |
| 7 | To pay | Amount | / | variable | Amount to pay after deduction the advance. Nowadays the field is ignored, the printer automatically calculates value for the surcharge, where the reference value is the value of the goods to which we provide the advance payment. |
| 8 | Control byte | 00..FF | | 2 | |

| | | | | | |
|---|--|--------|--|---|--|
| 9 | | <ESC>\ | | 2 | |
|---|--|--------|--|---|--|

Error's code:

2: control byte error,

Remarks:

1. Command should be sent after start or before end of receipt.
2. Settlement of the advance payment is provided to the first goods on the receipt.
3. The STORNO operation can not be performed on the goods for which the advance payment has been made, until the advance settlements had been cleared earlier.

3.20.8. Information on the table of contents.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------------|---------|-----------|------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Parameter | 0..1 | | 1 | 0 – do not switch the table of contents database 1 – switching the table of contents database |
| 3 | Information | 0..2 | | | 1 – send back information about the basic table of contents 2 – send back information about the backup table of contents |
| 4 | Extended information | 0..1 | | | 0 – basic report 1 – widen report |
| 5 | Command | ?CINDX | | 6 | |
| 6 | | <ESC>\ | | 2 | |

Format of sent back data on table of contents base:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|------------------|---------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Response code | ?CIX | | 2 | |
| 3 | Base carrier | Number | / | 1.11 | Carrier of table of content base |
| 4 | Record number | Number | / | 1.11 | Record number in table of content base |
| 5 | Size | Number | / | 1.11 | Size of table of content base [MB] |
| 6 | File number | Number | / | 1.11 | Indexed protected memory file |
| 7 | Position in file | Number | / | | Indexed item in the file |
| 8 | File number | Number | / | | Saved file number |
| 9 | Position in file | Number | / | | Position of saved file |
| 10 | Control byte | 00..FF | | 2 | |
| 11 | | <ESC>\ | | 2 | |

Remarks:

Immediately after the daily report, the file save entries may be zero. The next print initiates the position saving. Reading extended information may take a bit longer depending on the number of records. If -1 is returned in the number of records, it may mean that the database is damaged.

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error

3.20.9. ECR status.

| No | Field name | Content | Separator | Size | Remarks |
|----|----------------------|-------------|-----------|-------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Report type | Number | | 1 | 0 – non-resetting report, 1 – resetting report |

| 27 | Control byte | 00..FF | | 2 | |
| 28 | | <ESC>\ | | 2 | |

Where:

Quantity of cards

quantity of various credit cards,

Quantity of cheques

quantity of various cheques,

Quantity of vouchers

quantity of various vouchers,

Shift

inscription including optional printable characters, corresponding to the numeric or alphanumeric characterification of the shift,

Cashier

inscription reserved to the name and surname of the cashier,

Name of the card, Name of the cheque, Name of the bond

inscription parameters sent by an application fixing specified forms of payment,

ATTENTION! The Field name **of the cheque** appears only for the POSNET (see [Configuration the work of the printers – „Administration mode“](#)). Additional information in REMARKS point.

Beginning, End

parameters fixing the beginning and the end of the shift, usually in the format 'yy-mm-dd hh:mm'

Income

total sale during the shift,

Cash

value of cash sale,

Card

value of sale for specified paying cards,

Cheque

value of sale for specified kinds of cheques,

Voucher

value of sale for various kinds of vouchers,

Payments

sum of payments to the cash register during the shift,

Receives

sum of securities received during the shift,

Pay-outs

sum of pay-outs during the shift,

Returns

sum of deposits returned during the shift,

Cash register status

quantity of cash in the cash register after finishing the shift,

Quantity of receipts

quantity of receipts printed during the shift,

Quantity of cancelled

quantity of cancelled receipts,

Quantity of STORNO (reversal)

quantity of stormed positions,

Cash register number

(optional), cash register number.

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: error of parameters,
- 5: printer's RTC clock readout error,
- 33: error of inscription of Shift or Cashier,
- 34: error of one of the amounts or the rest of the inscriptions.

Remarks:

1. This Command can have two forms, depending on the fixed protocol of printer's transmission:
 - a. NOVITUS – the Field name of Cheque No does not appear, all fields have to appear. Such version is compatible with the previous versions of "Novitus accordable" printers' protocol.
 - b. "NOVITUS accordable" – the Field name of Cheque No does not appear, not all fields have to appear (proper parameters > 0). Such version is not compatible with the previous versions of "NOVITUS accordable" printers' protocol.

3.20.12. Printing the cash / shift report providing forms of payment (2).

| No | Field name | Content | Separator | Size | Remarks |
|----|--------------------------------|-------------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Quantity of collected deposits | 0..32 | ; | 1..2 | |
| 3 | Quantity of returned deposits | 0..32 | ; | 1..2 | |
| 4 | Quantity of forms of payment | 0..16 | ; | 1 | |
| 5 | Cash flag | 0..1 | ; | 1 | |
| 6 | Type of payment No ... | 1..5 | | 1 | Quantity of these parameters is the same as it was fixed in field No 4 (Quantity of forms of payment). |
| 7 | Command | #m | | 2 | |
| 8 | Shift | Inscription | <CR> | 0..8 | |

| | | | | | |
|----|-----------------------------------|-------------|------|-------|--|
| 9 | Cash register number | Inscription | <CR> | 0..8 | |
| 10 | Cashier | Inscription | <CR> | 0..32 | |

| 14 | Name of received deposit No ... | Inscription | <CR> | 0..24 | Quantity of these parameters is the same as it was fixed in field No 2 (Quantity of collected deposits). |
| 15 | Name of returned deposit No ... | Inscription | <CR> | 0..24 | Quantity of these parameters is the same as it was fixed in field No 3 (Quantity of returned deposits). |
| 16 | Income | Number | / | 1..11 | |
| 17 | Cash | Number | / | 1..11 | |
| 18 | Payments | Number | / | 1..11 | |
| 19 | Outcome | Number | / | 1..11 | |
| 20 | Pay-outs | Number | / | 1..11 | |
| 21 | Amount of forms of payment No ... | Number | / | 1..11 | Quantity of these parameters is the same as it was fixed in field No 4 (Quantity of forms of payment). |
| 22 | Received deposit | Number | / | 1..11 | |
| 23 | Amount of received deposit No ... | Number | / | 1..11 | Quantity of these parameters is the same as it was fixed in field No 2 (Quantity of received deposit) |
| 24 | Returned deposit | Number | / | 1..11 | |
| 25 | Amount of returned deposit No ... | Number | / | 1..11 | Quantity of these parameters is the same as it was fixed in field No 3 (Quantity of returned deposit) |
| 26 | Cash register status | Number | / | 1..11 | |
| 27 | Quantity of receipts | Inscription | <CR> | | |
| 28 | Quantity of cancelled | Inscription | <CR> | | |
| 29 | Quantity of STORNO | Inscription | <CR> | | |
| 30 | Control byte | 00..FF | | 2 | |
| 31 | | <ESC>\ | | 2 | |

Where:

Quantity of collected deposits

- 0: The block COLLECTED DEPOSIT does not appear,
- 1..n: The block COLLECTED DEPOSIT is printed and includes 1.. n lines + title,

Quantity of received deposits

- 0: The block RETURNED DEPOSIT does not appear,
- 1..n: The block RETURNED DEPOSIT is printed and includes 1.. n lines + title,

Quantity of forms of payment

- 0: there are no forms of payment, the block of names of forms of payment does not appear,
- 1..n: The parameters of type of payment appear, determining the kind of forms of payment, the block of names of forms of payment appears,

Cash flag

- 0: Amount of Cash is ignored (payment of cash does not take place),
- 1: payment of cash takes place,

Type of payment

According to NOVITUS 2001

- 1: the amount of payment by paying card is printed,
- 2: the amount of payment by a cheque is printed,
- 3: the amount of payment by a voucher-talon is printed,
- 4: the amount of payment in other form is printed,
- 5: the amount of payment by credit is printed,
- 6: the amount of payment from customer's account is printed

7: the amount of payment by foreign currency is printed

8: * the amount of payment by transfer is printed

According to "NOVITUS accordable" 2001

1: the amount of payment by paying card is printed,

2: the amount of payment by a cheque is printed,

3: the amount of payment by a voucher-talon is printed,

4: the amount of payment in other form is printed,

5: the amount of payment by credit is printed,

6: the amount of payment from customer's account is printed

7: * the amount of payment by voucher is printed

8: * the amount of payment by transfer is printed

Shift

inscription including optional printable characters, corresponding to the numeric or alphanumeric signification of the shift,

Cash register number

cash register number,

Cashier

inscription reserved to the name and surname of the cashier,

Beginning, End

parameters fixing the beginning and the end of the shift, usually in the format 'yy-mm-dd hh:mm'

Name of form of payment

additional significations of forms of payment (now if the quantity of forms of payment $\neq 0$),

Name of the collected deposit

name of the deposit package (now if the quantity of received securities $\neq 0$),

Name of the returned deposit

name of the deposit package (now if the quantity of returned securities $\neq 0$),

Income

total sale during the shift,

Cash

value of cash sale,

Payments

sum of payments to the cash register during the shift,

Outcomes

cash spent on transactions,

Pay-outs

sum of pay-outs from the cash register during the shift,

Amount of the form of payment

amount for proper forms of payment (if the quantity of forms of payment (0),

Returned deposit

accumulated amount for return of the deposit for returnable package,

Amount of the returned deposit

amounts of deposits returned for specified returnable packages (apply if the quantity of returned securities (0),

Collected deposit

accumulated amount of collected deposit for returnable package,

Amount of the collected deposit

amounts of deposits collected for specified returnable packages (apply if the quantity of returned securities (0),

Cash register status

quantity of cash in the cash register after the end of the shift,

Quantity of receipts

quantity of receipts printed during the shift,

Quantity of cancelled

quantity of cancelled receipts,

Quantity of STORNO (reversal)

quantity of stormed positions,

Errors' codes:

1: not initiated printer's clock,

2: control byte error,

4: error of parameters (Pkr..Pkb),

5: printer's RTC clock readout error,

33: error in inscription of Shift or Cashier,

* Type of payment appearing in QUARTO and DELIO PRIME printers

34: error of one of the amounts or other inscriptions.

Remarks:

1. In case that one or more parameters are lacking the presumable value is assumed to be = 0.
2. Parameter „Type of payment” can possess other values, depending on the type of protocol. In NOVITUS 2001 protocol, values determining the type correspond with values defining the type of payment in the commands of servicing the payment in the receipt and the end of receipt. In the “NOVITUS accordable” 2001 protocol their values are moved at one number back (1 corresponds to 0).
3. In case of necessity of gaining wide reports, they can be divided partials information concerning:
 - only the forms of payment
 - only the service of sold deposit packages
 - only the service of returned deposit packages.

3.21. Orders of printing fiscal reports.

3.21.1. Printing daily report.

| No | Field name | Content | Separator | Size | Remarks |
|----|----------------------|-------------|-----------|-------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | #r | | 2 | |
| 3 | Cash register number | Inscription | <CR> | 0..8 | Optional parameters – replacing the ones given by Cashier log-in |
| 4 | Cashier | Inscription | <CR> | 0..32 | |
| 5 | Control byte | 00..FF | | 2 | |
| 6 | | <ESC>\ | | 2 | |

or

| No | Field name | Content | Separator | Size | Remarks |
|----|----------------------|-------------|-----------|-------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant value | 0 | | 1 | |
| 3 | Command | #r | | 2 | |
| 4 | Cash register number | Inscription | <CR> | 0..8 | Optional parameters – replacing those introduced during cashiers log-in. |
| 5 | Cashier | Inscription | <CR> | 0..32 | |
| 6 | Control byte | 00..FF | | 2 | |
| 7 | | <ESC>\ | | 2 | |

or

| No | Field name | Content | Separator | Size | Remarks |
|----|----------------------|-------------|-----------|-------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant value | 1 | ; | 1 | |
| 3 | Year | 0..99 | ; | 1..2 | |
| 4 | Month | 1..12 | ; | 1..2 | |
| 5 | Day | 1..31 | | 1..2 | |
| 6 | Command | #r | | 2 | |
| 7 | Cash register number | Inscription | <CR> | 0..8 | Optional parameters – replacing those introduced during cashiers log-in. |
| 8 | Cashier | Inscription | <CR> | 0..32 | |
| 9 | Control byte | 00..FF | | 2 | |
| 10 | | <ESC>\ | | 2 | |

Where:

Year

- number of year (two latest digits, 2000..2099),
- Month**
number of month,
- Day**
day,
- Cash register number**
inscription including the name of the cash register
- Cashier**
inscription reserved for the cashier's name,

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 6: operation on fiscal memory error (fatal),
- 7: date error (the one currently fixed is older than the date of the last record) or in the third format there is no correspondence in the printer with the sent date,
- 35: empty totalizers,
- 36: a record of that date already exists (if the totalizers are empty),
- 37: operation broken from the keyboard (prior to starting the printing)

Remarks:

1. The operation requires confirmation if the date was not given (first sequence).
2. In the variant with parameter = 1, a multiple record of the daily report of the same date is possible. Other characteristics of the sequence are not changed, especially if the date Year, Month, Day is conformable with the printer's clock and the totalizers are not empty, the report will be obligatorily recorded without any message/ confirmation.
3. In case that the totalizers are empty and the daily report has already been recorded on that day, the printer reports error 36.

3.21.2. Printing periodical report.

Periodical report with the range determined by dates:

| No | Field name | Content | Separator | Size | Remarks |
|----|----------------------|--------------------|-----------|-------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Year 1 | 0..99 | ; | 1..2 | |
| 3 | Month 1 | 1..12 | ; | 1..2 | |
| 4 | Day 1 | 1..31 | ; | 1..2 | |
| 5 | Year 2 | 0..99 | ; | 1..2 | |
| 6 | Month 2 | 1..12 | ; | 1..2 | |
| 7 | Day 2 | 1..31 | ; | 1..2 | |
| 8 | Kind of report | 0..1, 6..7, 96..97 | | 1 | |
| 9 | Command | #o | | 2 | |
| 10 | Cashier | Inscription | <CR> | 0..32 | Optional parameters – replacing those introduced during cashiers log-in. |
| 11 | Cash register number | Inscription | <CR> | 0..8 | |
| 12 | Control byte | 00..FF | | 2 | |
| 13 | | <ESC>\ | | 2 | |

Where:

Year 1, Month 1, Day 1

primal date,

Year 2, Month 2, Day 2

final date,

Kind of report

0 (or none): full report (fiscal document) from the range of the given dates,

1: sale's summary (non-fiscal document) from the range of the given dates,

6: full monthly report (fiscal document),

- 7: monthly sale's summary (non-fiscal document),
- 96: full accounting report from the range of the given dates,
- 97: summary of accounting report from the range of the given dates,

Cashier

inscription reserved to the cashier's name and surname,

Cash register number

inscription including the name of the cash register

Periodical report with the range determined by numbers.

| No | Field name | Content | Separator | Size | Remarks |
|----|----------------------|------------------------|-----------|-------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Kind of report | 16..17, 96..97, 100 | | 2 | |
| 3 | Command | #o | | 2 | |
| 4 | Number 1 | Number | / | 1..10 | |
| 5 | Number 2 | Number | / | 1..10 | |
| 6 | Cashier | Inscription | <CR> | 0..32 | Optional parameters – replacing those introduced during cashiers log-in . |
| 7 | Cash register number | Inscription | <CR> | 0..8 | |
| 8 | Control byte | 00..FF | | 2 | |
| 9 | | <ESC>\ | | 2 | |

Where:

Kind of report

- 16: full (fiscal document) from the range of the given numbers,
- 17: sale's summary (non-fiscal document) from the range of the given numbers,
- 96: accounting report from the range of the given numbers,
- 97: summary of accounting report from the range of the given numbers,
- 100: Non-fiscal report of fiscal memory read (parameters of No.1 and No. 2 are ignored)

Number 1

start number,

Number 2

end number,

Cashier

inscription reserved to the cashier's name and surname,

Cash register number

inscription including the name of the cash register

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 3: wrong quantity of parameters,
- 4: error of parameters (values of the dates, also includes situations when the final date is earlier than the primal one, each of record in fiscal module for the given range of dates),
- 6: operation on fiscal memory error (fatal).

3.22. Orders of non-fiscal transactions.

3.22.1. Return of the package.

| No | Field name | Content | Separator | Size | Remarks |
|----|--------------|-------------------|-----------|-------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Ignored | 0..255 or none | | 1 | |
| 3 | Command | #w | | 2 | |
| 4 | Package | Inscription | <CR> | 1..20 | |
| 5 | Control byte | 00..FF | | 2 | |

| | | | | | |
|---|--|--------|--|---|--|
| 6 | | <ESC>\ | | 2 | |
|---|--|--------|--|---|--|

Where:

Package

Inscription including the name and the value of the returned package,

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 5: printer's RTC clock readout error,
- 31: over-addition (exceeding the amount of cash in the cash register).
- 33: error in package inscription.

3.22.2. Receipt of sale.

| No | Field name | Content | Separator | Size | Remarks |
|----|--|-------------|-----------|-------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Printing the number of the cash register and the cashier | 0..1 | ; | 1 | |
| 3 | Way of printing | 0..2 | | 1 | |
| 4 | Command | #g | | 2 | |
| 5 | Cash register number | Inscription | <CR> | 1..2 | |
| 6 | Cashier's number | Inscription | <CR> | 1..5 | |
| 7 | Receipt number | Inscription | <CR> | 1..12 | |
| 8 | Customer | Inscription | <CR> | 1..15 | |
| 9 | Terminal | Inscription | <CR> | 1..8 | |
| 10 | Name of the card | Inscription | <CR> | 1..16 | |
| 11 | Number of the card | Inscription | <CR> | 1..20 | |
| 12 | Month | Inscription | <CR> | 1..2 | |
| 13 | Year | Inscription | <CR> | 1..2 | |
| 14 | Code of authorization | Inscription | <CR> | 1..9 | |
| 15 | Amount | Number | / | 1..11 | |
| 16 | Control byte | 00..FF | | 2 | |
| 17 | | <ESC>\ | | 2 | |

Where:

Printing the number of cash register and cashier

- 0: line including cash register number / cashier's number is printed,
- 1: the above mentioned line is not printed,

Way of printing

- 0: print two copies, between the first and the second one a button has to be pushed,
- 1: print two copies – one after another (useful in a version with a „non-cutting” cutter),
- 2: print one copy,

Cash register number

Inscription including cash register number,

Cashier's number

Inscription including cashier's number,

Receipt number

Inscription including receipt number, paid with the appliance of a credit card,

Customer

Inscription including customer's name,

Terminal

Inscription including terminal's name,

Name of the card

Inscription including the name of the credit card,

Number of the card

Inscription including the number of the credit card,

Month

Inscription including the number of month in the year, determining the validity of the card,

Year

Inscription including two last digits of the year of validity of the card,

Authorization code

Inscription including authorization code,

Amount

Amount paid by credit card,

Remarks:

1. As in other controlling sequences, the 'string' type parameters may include optional printed characters.
2. If the parameter 'Way of printing' = 0 or 1 than on the first document there is a description printed 'Original for the seller' while on the second one a description 'Copy for the purchaser'. The description is printed directly before the final inscription 'non-fiscal'.

Errors' codes:

- 1: not initiated printer's clock,
- 4: parameter error Ps,
- 2: control byte error,
- 5: printer's RTC clock readout error,
- 41: error in inscription Cash register number (too long or including wrong characters),
- 42: error in inscription Cashier's number,
- 43: error in inscription Receipt number,
- 44: error in inscription the Customer,
- 45: error in inscription the Terminal,
- 46: error in inscription Name of the card,
- 47: error in inscription Number of the card,
- 48: error in inscription the Month,
- 49: error in inscription the Year,
- 50: error in inscription authorization Code,
- 51: error in Amount value.

3.22.3. Transaction of accepting (return of goods).

| No | Field name | Content | Separator | Size | Remarks |
|----|--|-------------|-----------|-------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Printing the number of the cash register and the cashier | 0..1 | ; | 1 | |
| 3 | Way of printing | 0..2 | | 1 | |
| 4 | Command | #h | | 2 | |
| 5 | Cash register number | Inscription | <CR> | 1..2 | |
| 6 | Cashier's number | Inscription | <CR> | 1..5 | |
| 7 | Receipt number | Inscription | <CR> | 1..12 | |
| 8 | Customer | Inscription | <CR> | 1..15 | |
| 9 | Terminal | Inscription | <CR> | 1..8 | |

| 11 | Number of the card | Inscription | <CR> | 1..20 | |
| 12 | Month | Inscription | <CR> | 1..2 | |
| 13 | Year | Inscription | <CR> | 1..2 | |
| 14 | Authorization code | Inscription | <CR> | 1..9 | |

| | | | | | |
|----|--------------|--------|---|-------|--|
| 15 | Amount | Number | / | 1..11 | |
| 16 | Control byte | 00..FF | | 2 | |
| 17 | | <ESC>\ | | 2 | |

Where:

Printing the number of cash register and cashier

- 0: line including cash register number / cashier's number is printed,
- 1: the above mentioned line is not printed,

Way of printing

- 0: print two copies, between the first and the second one a button has to be pushed,
- 1: print two copies – one after another (useful in a version with a „non-cutting” cutter),
- 2: print one copy,

Cash register number

Inscription including cash register number,

Cashier's number

Inscription including cashier's number,

Receipt number

Inscription including receipt number, paid with the appliance of a credit card,

Customer

Inscription including customer's name,

Terminal

Inscription including terminal's name,

Name of the card

Inscription including the name of the credit card,

Number of the card

Inscription including the number of the credit card,

Month

Inscription including the number of month in the year, determining the validity of the card,

Year

Inscription including two last digits of the year of validity of the card,

Authorization code

Inscription including authorization code,

Amount

Amount paid by credit card,

Remarks:

1. As in other controlling sequences, the 'string' type parameters may include optional printed characters.
2. If the parameter 'Way of printing' = 0 or 1 than on the first document there is a description printed 'Original for the salver' while on the second one a description 'Copy for the purchaser'. The description is printed directly before the final inscription 'non-fiscal'.

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error
- 4: parameter error,
- 5: printer's RTC clock readout error,
- 41: error in inscription Cash register number (too long or including wrong characters),
- 42: error in inscription Cashier's number,
- 43: error in inscription Receipt number,
- 44: error in inscription the Customer,
- 45: error in inscription the Terminal,
- 46: error in inscription Name of the card,
- 47: error in inscription Number of the card,
- 48: error in inscription the Month,
- 49: error in inscription the Year,
- 50: error in inscription authorization Code,
- 51: error in Amount value.

3.23. Additional non-fiscal printouts.

3.23.1. Starting the printout.

| No | Field name | Content | Separator | Size | Remarks |
|----|------------|---------|-----------|------|---------|
|----|------------|---------|-----------|------|---------|

| | | | | | |
|----|---------------------------------|--------|------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant | 0 | ; | 1 | |
| 3 | Printout number | 1..255 | ; | 1..3 | |
| 4 | Header number | 0..255 | | 1..3 | 0 when the printout possesses only one kind of header |
| 5 | Printout options | 0..255 | | 1..3 | Printout options, where the following bits mean: 1 – left margin on the printout 2 – no printout on paper (only electronic copy), 3 – no text in header printed 4 – without “Non-fiscal” margins printed |
| 6 | Whether there is transaction ID | 0..1 | | 1 | |
| 7 | Command | \$w | | 2 | |
| 8 | Transaction ID | Text | <CR> | | Optional parameter. It appears if field „Whether there is transaction ID” = 1 |
| 9 | Control byte | 00..FF | | 2 | |
| 10 | | <ESC>\ | | 2 | |

Or (when defining protocol to send e-documents):

| No. | Field name | Content | Separator | Size | Remarks |
|-----|---------------------------------|-------------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant | 0 | ; | 1 | |
| 3 | Printout number | 1 . .255 | ; | 1..3 | |
| 4 | Header number | 0 . .255 | ; | 1..3 | 0 when the printout possesses only one kind of header |
| 5 | Printout options | 0 . .255 | ; | 1..3 | Printout options, where the following bits mean: 1 – left margin on the printout 2 – no printout on paper (only electronic copy), 3 – no text in header printed 4 – without “Non-fiscal” margins printed |
| 6 | Whether there is transaction ID | 0..1 | | 1 | |
| 7 | Protocol to send eDocument | 0..2 | | 1 | 0 or field not exist – default protocol from configuration, 1 – NOVITUS, 2 – MF. |
| 8 | Command | \$w | | 2 | |
| 9 | Transaction ID | Text | <CR> | | Optional parameter. It appears if field „Whether there is transaction ID” = 1 |
| 10 | Control byte | 00 . . FF | | 2 | |
| 11 | | <ESC>\ | | 2 | |

Where:

Number of printout

Number of the report which line is to be printed. Accepted numbers are in the specification of printouts included in the further part of this chapter.

Number of the header

Number of the header which is to be printed (some reports possess few defined headers). If the printout possesses only one kind of header than this parameter should have the value = 0 (counting of the headers is started from zero). The meaning of each number depends on which printout they are present. Exact specification is included in the further part of this chapter.

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error,
- 5: printer's RTC clock readout error,

3.23.2. Printout line (\$w).

| No. | Field name | Content | Separator | Size | Remarks |
|-------|--------------------|------------|-----------|--------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Number of printout | 2..255 | ; | 1..3 | If 254 than in line will be printed a bar code (the fiscal printers which execute bar code printout). The code is sent in argument. |
| 3 | Number of lines | 0..255 | ; | 1..3 | 249 when the line is to be a <u>QR code</u> 255 when the line is to empty, 253 when the line „number of last receipt” 250 when the line is to be a graphic (in 1 argument submit a graphic index 0..5) 254 when the line is to be an undersign, |
| 4 | Text formatting | 0..255 | ; | 1..3 | Optionally parameter, it can has value: 1 – bold text (decreases about half amount of characters placed in the single line) |
| 5 | Text formatting | 0..255 | ; | 1..3 | 1 – text inverse |
| 6 | Font | 0..3 | ; | 1 | 0 – basic font 1 – font 2 2 – font 3 (small) |
| 7 | Text formatting | 0..1 | ; | 1 | 0 – no centring 1 – centring |
| 8 | Font attributes | 0..255 | | 1..3 | Attributes set on bits: 1 – font enlarged, reduced number of characters per line by half (enlargement contained in typeface) 2 – increased font 3 – font enlarged, reduced number of characters per line by half 4 – inverse 5 – font increased 4 x 6 – font enlarged 4 x |
| 9 | Command | \$w | | 2 | |
| 10 | Argument | Text | <CR> | 0..64* | These arguments are optional. Their quantity is optional. |
| ... | | | | | |
| N | Argument | Text | <CR> | 0..64* | *Maximum number of characters in non-fiscal printout line depends on printer model, font formatting and flags set in print start. Detailed values are provided in the additional table. |
| n + 1 | Control byte | 00..FF | | 2 | |
| n + 2 | | <ESC>\ | | 2 | |

Where:

Number of printout

Number of the report which line is to be printed. Accepted numbers are in the specification of printouts is included in the further part of this chapter.

Number of line

Number of line which is to be printed (counting is started from zero, ignoring the ones which are headers). If this parameter is = 254 than an undersign will be printed, and when = 255 then an empty line will be printed. The meaning of each number depends on which printout they appear. Exact specification is included in the further part of this chapter.

Argument

An optional sequence of characters from the clusters: {a..z}, {A..Z}, {0..9}, {ąęłóńśźżĄĆĘŁÓŃŚŹŻ}, {~@#%\$^&*()_-=+{[]}\|;:~"'.<.>/? }. Numeric arguments accept: digits, first three letters, special characters; text arguments accept: letters, first three digits, special characters. Alphanumeric arguments accept all the above mentioned characters. Quantity and kind of arguments which can be sent during the printout of specified lines were specified above.

Remarks:

1. Specification of arguments in lines uses the following symbols:
 - a. *** alphanumeric argument
 - b. ### numeric argument
 - c. @@@ text argument
2. In Delio printers it is possible to print bar codes in non-fiscal printouts. In that case identification 254 should be placed as „Number of printout” parameter and then in field „Argument” place code which should be printed.

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error,
- 5: printer's RTC clock readout error,

3.23.3. Ending the printout.

| No | Field name | Content | Separator | Size | Remarks |
|----|----------------------------------|------------|-----------|-------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant | 1 | ; | 1 | |
| 3 | Number of printout | 1..255 | ; | 1..3 | If 255 than sending this sequence prior to an optional non-fiscal report would cause printing system number and additional lines after it |
| 4 | There is a system number | 0..1 | ; | 1 | 0 – No, 1 - Yes |
| 5 | Quantity of additional lines | 0..3 | | 1 | |
| 6 | There is e-document sending mode | 0..1 | ; | 1 | |
| 7 | Command | \$w | | 2 | |
| 8 | System No | Text | <CR> | 0..16 | Optional argument |
| 9 | Line No 1 | Text | <CR> | 0..64 | Optional arguments. * - 64 characters for HD, wide paper, normal font, - 44 characters for HD, wide paper, enlarged font - 44 characters for HD, narrow paper, - 42 characters for Bono Online, Deon Online, |
| 10 | Line No 2 | Text | <CR> | 0..64 | |
| 11 | Line No 3 | Text | <CR> | 0..64 | |
| 12 | e-document sending mode | Number | <CR> | 0..2 | Optional argument Operating mode: 0 – if no confirmation of e-printout receiving by server, print the printout and don't try to send e-printout again 1 – if no confirmation of e-printout receiving by server, keep trying to send |

| | | | | | |
|----|--------------|--------|--|---|---|
| | | | | | e-printout until successful 2 - if no confirmation of e-printout receiving by server, print the printout and keep trying to send e-printout until successful |
| 13 | Control byte | 00..FF | | 2 | |
| 14 | | <ESC>\ | | 2 | |

3.24. Specification of printouts.

In black letters are the fields which length is characteristic for VENTO printer (33 characters in a verse), in blue colour there are the ones lengthened for the QUARTO, DELIO printer (44 characters in a verse), in violet colour there are the ones lengthened for the VIVO printer (48 characters in a verse).

Error code:

1: not initiated printer's clock

4.7. Programming packet of Playlist (@API)

Restrictions:

Operated by the printer HDE.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------------------|---------------------|-----------|------------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant value | 0 | ; | 1 | |
| 3 | Entry activity | 0..1 | | 1 | 0 – not active (advertisement is omitted) 1 – active |
| 4 | Command | @API | | 4 | |
| 5 | Entry position on the list | 0..19 | / | | For HDE 2.0: 0-19 |
| 6 | Name of advertisement file | Text | <CR> | changeable | The adequate advertisement should be programmed with packet @A |
| 7 | Year | 0..99 | / | 1..2 | Initial date of clip activity |
| 8 | Month | 1..12 | / | 1..2 | |
| 9 | Day | 1..31 | / | 1..2 | |
| 10 | Year | 0..99 | / | 1..2 | Final date of clip activity |
| 11 | Month | 1..12 | / | 1..2 | |
| 12 | Day | 1..31 | / | 1..2 | |
| 13 | Hour | 0..23 | / | 1..2 | Initial hour of clip activity (time isn't associated with date) |
| 14 | Minute | 0..59 | / | 1..2 | |
| 15 | Second | 0..59 | / | 1..2 | |
| 16 | Hour | 0..23 | / | 1..2 | Final hour of clip activity (time isn't associated with date) |
| 17 | Minute | 0..59 | / | 1..2 | |

| | | | | | |
|----|--|-------------|---|------|---|
| 18 | Second | 0..59 | / | 1..2 | |
| 19 | Advertisement active in days | 0..127 | / | 1..3 | Active day of clip performing depends on setting the adequate bit: Bit 1 – Sunday Bit 2 – Monday Bit 3 – Tuesday Bit 4 – Wednesday Bit 5 – Thursday Bit 6 – Friday Bit 7 – Saturday |
| 20 | Number of advertisement plays since transferring to the next one | -1..99999 | / | 1..5 | (-1) – Infinite number of clip plays (0) – It forces taking into account only field 25 – time of displaying an advertisement |
| 21 | Default animation | 0..1 | / | 1 | 0 – Animation is not default 1 – Default animation In the event that none of the animation is eligible to appear in the concrete time, animation is displayed by default. If there are several default animation, the one is taken which has the lowest number in the list. |
| 22 | Setting the clock in the vertical | 2,3,4 | / | 1 | 2 - up 3 - down 4 - centre |
| 23 | Setting the clock in the horizontal | 0,1 | / | 1 | 0 – left 1 - right 4 - centre |
| 24 | Clock visibility | 0..1 | / | 1 | 0 - invisible 1 - visible |
| 25 | Minimum time of displaying an advertisement (in millisecond) | 0..99999999 | / | | Field operated since HD E 3.00. When displaying time is set to 0, then the item from field 20 is taken – number of replays. |
| 26 | Control byte | 00..FF | / | 2 | |
| 27 | | <ESC>\ | | 2 | |

Request about entry from advertisement list:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------------------|---------------------|-----------|----------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant value | 1..2 | ; | 1 | 1 – playlist readout 2 – playlist delete |
| 3 | Command | @API | | 4 | |
| 4 | Entry position on the list | 0..19 | / | | For HDE 2.0: 0-19 |
| 5 | Control byte | 00..FF | / | 2 | |
| 6 | | <ESC>\ | | 2 | |

Error codes:

- 2: control byte error,
- 4: parameter error – error reported in case when value of field " Entry position on the list" is out of range

Remarks:

To send back the full contents of the list, one should ask about all the positions. If any item is empty, the default value is resent for each field.
File name of advertising is verified when try to play it. In case if it is not correct, that advertising will not be played.

Response packet for reading the playlist:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--|---------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant | 0 | ; | 1 | 1 – playlist exists 0 – playlist doesn't exist |

4.8.2. Outdraw of paper (#I).

| No | Field name | Content | Separator | Size | Remarks |
|----|-------------------|-----------|-----------|------|----------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Quantity of lines | 0..20 | | 1..2 | |
| 3 | Command | #I | | 2 | |
| 4 | Control byte | 00..FF | | 2 | Optional field |
| 5 | | <ESC>\ | | 2 | |

Where:

Quantity of lines

outdraw of paper at 0..20 lines. Sequence is blocked during the transaction and in saving mode.

Errors' codes:

- 2: control byte error,
- 4: parameter error - Quantity of lines.

4.8.3. Outdraw of paper (#l) with cutting.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|-------------------|---------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Quantity of lines | 0..20 | ; | 1..2 | |
| 3 | Cutting | 1 | | 1 | 0 – no cutting 1 – cutting 2 – partial cutting |
| 4 | Command | #l | | 2 | |
| 5 | Control byte | 00..FF | | 2 | Optional field |
| 6 | | <ESC>\ | | 2 | |

Where:

Quantity of lines

outdraw of paper at 0..20 lines. Sequence is blocked during the transaction and in saving mode.

Errors' codes:

- 2: control byte error,
- 4: parameter error - Quantity of lines

4.8.4 Database control (#b).

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|---------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Action | 0 | | 1 | |
| 3 | Command | #b | | 2 | |
| 4 | Control byte | 00..FF | | 2 | |
| 5 | | <ESC>\ | | 2 | |

| No | Field name | Content | Separator | Size | Remarks |
|----|--------------|-------------|-----------|-------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Action | 1 | | 1 | |
| 3 | Command | #b | | 2 | |
| 4 | Name | Inscription | <CR> | 1..40 | Parameters which appear only when Action = 1 |
| 5 | PTU | A..G, Z | / | 1 | |
| 6 | Control byte | 00..FF | | 2 | |
| 7 | | <ESC>\ | | 2 | |

| No | Field name | Content | Separator | Size | Remarks |
|----|----------------------|-------------|-----------|-------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Action | 2 | | 1 | |
| 3 | Command | #b | | 2 | |
| 4 | Cash register number | Inscription | <CR> | 0..8 | Optional parameters which may appear Action = 2. Optional parameters – replacing those introduced during cashiers log-in.. |
| 5 | Cashier | Inscription | <CR> | 0..32 | |

| | | | | | |
|---|--------------|--------|--|---|--|
| 6 | Control byte | 00..FF | | 2 | |
| 7 | | <ESC>\ | | 2 | |

Where:

Action

- 0: beginning of the test,
- 1: sending data record,
- 2: end of test

Name

name of the item in the base,

PTU

PTU rate signification,

Cash register number

inscription including the name of the cash register

Cashier

inscription reserved for the name of the cashier,

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error / sequence error (e.g. first the end: Action = 2 then data: Action = 1),
- 38: name error,
- 39: PTU signification error, PTU out of the A-G range

4.8.5. Menu displaying (\$m).

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|------------|-----------|------|----------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | \$m | | 2 | |
| 3 | Control byte | 00..FF | | 2 | Optional field |
| 4 | | <ESC>\ | | 2 | |

4.9. Additional communication packets.

Packets present in QUARTO fiscal printers and more recent ones.

4.9.1. Handling tunnelling the transmission of AUX1 and AUX2 ports PC1 and PC2 (^x).

Ports: PC1, PC2

| No | Field name | Content | Separator | Size | Remarks |
|----|-------------------|-----------|-----------|--------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Function | 0..3 | ; | 1 | 0 – resetting of queue 1 – query for the queue size 2 – readout of printer's receiving queue 3 – record of printer's sending queue |
| 3 | Port number | 2,3 | ; | 1 | 2 – AUX1, 3 – AUX2 |
| 4 | No of queue | 1-3 | | 1 | 1 – receiving 2 – sending (from the printer) 3 – both: receiving and sending (for resetting only), |
| 5 | Command | ^x | | 2 | |
| 6 | Quantity of bytes | Number | / | 1..3 | Quantity of bytes depending on the function: in queue, to be sent, received |
| 7 | Data buffer | Text | <CR> | 1..512 | Data to be sent or readout, hexadecimal |

| | | | | | |
|----|--------------|--------|--|---|--|
| | | | | | coded, 2 characters per byte e.g. sequence of bytes of values 1,2,3,15 will be sent here as 0102030F |
| 13 | Control byte | 00..FF | | 2 | |
| 14 | | <ESC>\ | | 2 | |

Remarks:

1. The printer does not send anything to the queues resetting function.
2. For the function of readout of the queue size, the printer responses by the same packet as request with a filled field „Quantity of bytes”. The „Data” field does not appear in the response.
3. For the function of readout of receiving queue, the printer responses by the same packet as request with a filled field „Quantity of bytes” (actually sent back) and „Data” (size of the Field equal to 2 x "Quantity of bytes").

4.9.2. Handling the controlling of modem lines of transmission of AUX1- AUX2 ports by PC1 and PC2 ports (^m).

Ports: PC1, PC2

| No | Field name | Content | Separator | Size | Remarks |
|----|-----------------------|-----------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Function | 0..1 | ; | 1 | 0 – setting modem signals 1 – readout of modem signals |
| 3 | Port number | 2,3 | | 1 | 2 – AUX1, 3-AUX2 |
| 4 | Command | ^m | | 2 | |
| 5 | Signals for setting | number | / | 1 | Following bits set on 1 mean signals which are to be set on 1: Bit 0 – RTS Bit 1 – DTR |
| 6 | Signals for resetting | number | / | 1 | Following bits set on 1 mean signals which are to be set on 0: Bit 0 – RTS Bit 1 – DTR |
| 7 | Control byte | 00..FF | | 2 | |
| 8 | | <ESC>\ | | 2 | |

Packet of responses to the readout function (1):

| No | Field name | Content | Separator | Size | Remarks |
|----|---------------|-----------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Function | 1 | ; | 1 | 1 – readout of modem signals |
| 3 | Port number | 2,3 | ; | 1 | 2 – AUX1, 3-AUX2 |
| 4 | Command | ^m | | 2 | |
| 5 | Modem signals | number | / | 1-2 | Following bits set on 1 mean signals which are to be set on 1: Bit 0 – RTS Bit 1 – DTR Bit 2 – CTS Bit 3 – DSR |
| 6 | Control byte | 00..FF | | 2 | |
| 7 | | <ESC>\ | | 2 | |

Remarks:

1. Separate signal Fields for setting and resetting allow full controlling over optional lines without the necessity to know the statuses of non-changed lines.

4.9.3. Readout of periodical review date (^t).

Ports: PC, PC2

If it's empty, the service blockade is removed.

Text

Telephone number of service point, excessive characters are cut. If there is no argument – the previous one stays.

Errors codes:

- 1: not initiated printer's clock,
- 4: parameter error,

4.9.5. Question about data from the last receipt (?I).

Ports: PC2, PC

| No | Field name | Content | Separator | Size | Remarks |
|----|---------------------|-------------|-----------|------|---|
| 1 | | <ESC>P | | 2 | |
| | Kind of information | | ; | | 0 – receipt summary 1 – receipt positions 2 – positions of returnable packages 3 – forms of payment 4 – summary of receipt 2 5 – receipt positions and sub-totals 6 – receipt summary |
| 2 | Number of position | 0..255 | | 1..3 | |
| 3 | Command | ?I | | 2 | |
| 4 | Control byte | Inscription | | 2 | |
| 5 | | <ESC>\ | | 2 | |

Remarks:

1. The PC program has to make queries about each single piece of data. Firstly, a summary of the receipt shall be taken to know how many single pieces are to be asked for. If it makes a query beyond the range it will get a packet of responses without data, i.e.. <ESC>Pi?Ibk<ESC>\ Where i – kind of information and Ii - Control byte.

Responses:

4.9.6. Handling the data of logs of communication monitor (?m)

Ports: PC1, PC2

| No | Field name | Content | Separator | Size | Remarks |
|----|---------------|---------|-----------|------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Kind of order | | ; | | 0 – readout the first log 1 – readout the next log 2 – remove log data for the given port |
| 3 | Port number | 1..4 | | 1 | Identifiers of COM ports: 1 – COM1 2 – COM2 3 – COM3 4 – COM4 N - COMN – depending on number of communication port of device |
| 4 | Command | ?m | | 2 | |
| 5 | Control byte | 00..FF | | 2 | |
| 6 | | <ESC>\ | | 2 | |

Remarks:

1. Kind of order = 0 sets the internal log indicator as first and sends it back. Order = 1 increases the internal log indicator so that it indicates the next log and sends it back or sends an empty log if there is no next log.
2. Packets of big logs may be divided into few packets, 256(Quarto) or 128 (Vivo/Vento) bytes each.
3. The PC always has to inquire about logs or packets of logs if the logs were big and were divided into few packets. The printer itself does not send back following packets of the same log. The following log will be send back as the PC queries about all packets of the previous log (if there are few because the packet was to big).

4. Further information about dividing logs into packets are included in the remarks to the packet of answers including data of logs.

Response for orders of logs' readout:

| No | Field name | Content | Separator | Size | Remarks |
|----|--|---------|-----------|--------|---|
| 1 | | <ESC>P | | 2 | |
| 5 | Command | ?m | | 2 | |
| | Port No | 1..4 | / | | |
| | Transmission direction | 0,1 | / | | 0 – data received by the printer 1 – data sent by the printer |
| | Date and time of log | | <CR> | | Format: yyyy-mm-dd hh:mm:ss:mmm |
| | Total quantity of bytes in log | 0 | / | | |
| | Offset of data in log | 0-nnnn | / | | When: =0 : data >0 : continuation of the previous log Log may be sent in many packets if its size exceeds 256 bytes for Quarto and 128 for Vivo/Vento. |
| 6 | Quantity of bytes in log in the current packet | Number | / | 1..3 | Log may be sent in many packets. Here the information is included how many is sent in this packet. |
| 7 | Data buffer | Text | <CR> | 1..512 | Data of log's bytes, hexadecimal coded, 2 characters per byte e.g. sequence of bytes of values 1,2,3,15 will be sent here as 0102030F |
| 13 | Control byte | 00..FF | | 2 | |
| 14 | | <ESC>\ | | 2 | |

Remarks:

1. Receiving an empty log with a null quantity of bytes means the last log
2. If the amount of bytes in log exceeds 256 (Quarto/Delio) or 128 (Vivo/Vento) than such a log will be sent back in many packets. The „Log data offset” and „Quantity of bytes in log in the current packet” Fields shall be used build a full log during the transmission of the following packets. Recognizing that a packet is a transmission of the following part of the previous log bases on the analysis of the „Offset of data in log” Field which is >0 when the packet is a continuation of the previous log.
3. Transmission of the query of communication log data is recorded to communication logs only at the first time, unless the time between inquiries about the further log data is longer than 3[s].
4. During the transmission of the data connected with receiving communication logs, no transmission is logged by the time of its completion or after 3[s] in case that the transmission was not successfully completed.
5. Transmissions of answers for queries of the data of communication monitor logs are not recorded to communication logs in order to avoid their useless usage.

4.9.7. Configuration settings (^c).

Ports: PC1

| No | Field name | Content | Separator | Size | Remarks |

| | | | | | |
|-----------|--|---------------------|-------------------|----------|--|
| | | | | | |
| 58 | Option No. | number | <CR> | 2 | 27 |
| 59 | Wake up the device from communication port | 0..7 | <CR> | 1 | Subsequently set bits mean: For Deon printer: 1 – Waking up from COM1 2 – Waking up from COM2 (BT) 3 – Waking up from COM3 (USB) For Bono printer: 1 – Waking up from COM1 For Delio printer: 1 – Waking up from COM2 and COM3 |
| 60 | Option No. | number | <CR> | 2 | 28 |
| 61 | Control of cashiers logging | 0..1 | <CR> | 1 | 0 – switched on 1 – switched off Switched on control of cashiers logging causes automatically printout of cashier change report (resetting) – ending cashier change – in moment of new cashier logging |
| 62 | Option No. | number | <CR> | 2 | 29 (only MiniPos) |
| 63 | Calibration of printer's clock | -36000.. ..36000 | <CR> | 1..6 | |
| 64 | Option No. | number | <CR> | 2 | 30 (only MiniPos) |
| 65 | Contrast of cashier's display | 60.. 127 | <CR> | 2..3 | |
| 66 | Option No. | number | <CR> | 2 | 31 (printers with invoices operating) |
| 67 | Option of invoice printout | 0.. 1 | <CR> | 1 | 0 – switched on 1 – switched off Switched on option causes message about copy's (of invoice) printout on printer's display before its printing |
| 68 | Option No. | number | <CR> | 2 | 32 |
| 69 | Height of bar code on receipt | 0.. 255 | <CR> | 1..3 | Height of bar code printed in receipt line 40 – default value |
| 70 | Option No. | number | <CR> | 2 | 33 |
| 71 | Height of the rest bar codes | 0.. 255 | <CR> | 1..3 | Height of bar code printed under receipt, under invoice, under non-fiscal printout and on non-fiscal printout 100 – default value |
| 72 | Option No. | number | <CR> | 2 | 34 |
| 73 | Font type on printouts | 0.. 1 | <CR> | 1 | 0 – normal 1 – thin |
| 74 | Option No. | number | <CR> | 2 | 35 |
| 75 | Font type on printout's title | 0.. 1 | <CR> | 1 | 0 – normal 1 – thin (enlarged) |
| 76 | Option No. | number | <CR> | 2 | 36 |
| 77 | Format of position printout on invoice | 0.. 1 | <CR> | 1 | 0 – basic 1 – shortened |
| 78 | Option No. | number | <CR> | 2 | 37 |
| 79 | Format of position printout on receipt | 0.. 1 | <CR> | 1 | 0 – basic 1 – aligning prices |
| 80 | Option No. | number | <CR> | 2 | 38 |
| 81 | Change control on receipt | 0.. 1 | <CR> | 1 | 0 – switched on 1 – switched off |
| 82 | Option No. | number | <CR> | 2 | 39 |
| 83 | Scale of QRCode | 2..10 | <CR> | 2 | Uwaga! Zalecana maksymalna wartość |

| | | | | | |
|-----|--|---------------|-------------------|----------|--|
| | | | | | skali to 10 (dla wydruku szerokiego) i 7(dla wydruku wąskiego), pozwoli ona zachować prawidłowy wydruk dla każdej wersji QR kodu dopuszczalnej w drukarkach. Powyżej 10 (dla wydruku szerokiego) i 7(dla wydruku wąskiego), maksymalna wartość skali zależy od ustawionej wersji QR kodu. |
| 84 | Option No. | number | <CR> | 2 | 40 |
| 85 | QRCode version | 0..9 | <CR> | 0 | 0 – automatic 1. 21x21 2. 25x25 3. 29x29 4. 33x33 5. 37x37 6. 41x41 7. 45x45 8. 49x49 9. 53x53 |
| 86 | Option No. | number | <CR> | 2 | 41 |
| 87 | Level of errors correction QRCode(ECL) | 0..3 | <CR> | 3 | 0. low (L 7%) 1. average (M 15%) 2. high (Q 25%) 3. extremely high (H 30%) |

| 215 | Style of receipt's window | number | <CR> | 1 | 0 – basic 1 – concentrated |
| 216 | Option No. | number | <CR> | 3 | 114 (printers with invoice operating) |
| 217 | Invoice printout options | 0..1 | <CR> | 1 | Inserting a left margin on the whole printout length of invoice (invoice copy) 0 – switched off 1 – switched on |
| 218 | Option No. | number | <CR> | 3 | 115 |
| 219 | Limited access | 0..1 | <CR> | 1 | 0 – switched off 1 – switched on |
| 220 | Option No. | number | <CR> | 3 | 116 |
| 221 | Automatic monthly report | 0..1 | <CR> | 1 | 0 – switched off 1 – switched on |
| 222 | Option No. | number | <CR> | 3 | 117 |
| 223 | Automatic periodical report | 0..1 | <CR> | 1 | 0 – switched off 1 – switched on |
| 224 | Option No. | number | <CR> | 3 | 119 |
| 225 | Inversion of the operator display | 0..1 | <CR> | 1 | 0 - switched off 1 - switched on |

| | | | | | |
|-----|---|---------------|-------------------|----------|---|
| 226 | Option number | number | <CR> | 3 | 131 |
| 227 | Digital signature printout on the receipt in graphical mode | 0..1 | <CR> | 1 | 0 - switched off 1 - switched on |
| 228 | Option number | number | <CR> | 3 | 132 |
| 229 | Digital signature printout on the invoice in graphic mode | 0..1 | <CR> | 1 | 0 - switched off 1 - switched on |
| 230 | Option number | number | <CR> | 3 | 133 |
| 231 | Daily report without print on paper | 0..1 | <CR> | 1 | 0 - switched off 1 - switched on |
| 232 | Option number | number | <CR> | 3 | 134 |
| 233 | Blocking the daily report call from the menu | 0..1 | <CR> | 1 | 0 - switched off 1 - switched on |
| 234 | Option number | number | <CR> | 3 | 135 |
| 235 | Password to bypass the blockage of the daily report | 0..9999 | <CR> | 1 | Insignificant zeros (preceding) are ignored (0001 == 1) 0 (zero) - disabling the password |
| 236 | Option number | number | <CR> | 3 | 136 |
| 237 | Blocking configuration change from the printer menu | 0..1 | <CR> | 1 | 0 - switched off 1 - switched on |
| 238 | Option number | number | <CR> | 3 | 137 |
| 239 | Password to bypass the lock of configuration change from the printer menu | 0..9999 | <CR> | 1 | Insignificant zeros (preceding) are ignored (0001 == 1) 0 (zero) - disabling the password |
| 240 | Option number | number | <CR> | 3 | 138 |
| 241 | Automatic hiding the printer menu | 0..1 | <CR> | 1 | 0 - switched off 1 - switched on |
| 242 | Option number | number | <CR> | 3 | 139 |
| 243 | The time after which the menu will be hidden | 5..9999 | <CR> | 1..4 | Time in [s] |
| 244 | Option number | number | <CR> | 3 | 140 |
| 245 | Digital signature printout on a daily report in graphic form | 0..1 | <CR> | 1 | 0 - switched off 1 - switched on |
| 246 | Option number | number | | 3 | 141 |
| 247 | Print graphic header options | 0..7 | <CR> | 1 | Subsequent set bits mean 1 – print on paper, 2 – print on invoice, 3 – print on the rest printouts |
| 248 | Option number | number | <CR> | 3 | 142 |
| 249 | Turning the customer printout monitor on or off (setting to one requires setting 143 and 144) | 0..1 | <CR> | 1 | 0 - switched off 1 - switched on |

| | | | | | |
|-----|---|---------------|-------------------|--------------------|--|
| 250 | Option number | text | <CR> | 3 | 143 |
| 251 | Address (IP or name) of the printout monitor server - what printer will connect to and send printouts (an integral part of 144) | | <CR> | max 128 characters | Address in the form of IP or domain name |
| 252 | Option number | number | <CR> | 3 | 144 |
| 253 | The print server port to which the printer will connect | 1.. 65535 | <CR> | 16 | Port no. |
| 254 | Option number | number | <CR> | 3 | 145 |
| 255 | Automatic hiding (reference) of the information dialogue | 0..1 | <CR> | 1 | 0 - switched off 1 - switched on The dialogue will be hidden (cancelled) after 5 seconds |
| 256 | Option number | number | <CR> | 3 | 146 |
| 257 | Information about errors in animation files. When the option is turned off and the error in the animation is displayed, the default screen (date + time) is displayed instead of the board with information about the error | 0..1 | <CR> | 0..1 | 0 - switched off 1 - switched on |
| 258 | Option number | number | <CR> | 3 | 147 |
| 259 | If this option is enabled, the menu will be accessible only by a special key (holding OK for 3s) - elimination of accidental entry to the menu. | 0..1 | <CR> | 0..1 | 0 - switched off 1 - switched on |
| 260 | Option number | number | <CR> | 3 | 150 |
| 261 | Is WLAN enabled ? | 0..1 | <CR> | 1 | 0 - switched off 1 - switched on |
| 262 | Option number | number | <CR> | 3 | 151 |
| 263 | SSID WLAN | text | <CR> | 0..32 | SSID name |
| 264 | Option number | number | <CR> | 3 | 152 |
| 265 | WLAN password | text | <CR> | 0..40 | WLAN password. Field only possible to program |

Remarks:

1. Item No relates to item Field situated below.
2. Accepting QRCode scale that exceeds print can cause not printing the code.
3. QRCode acts in alphanumeric mode, what means that acceptable are the following characters: capital letters A..Z, digits 0..9 and space, \$, %, *, +, -, ., /, :
4. One device can be connected only to one COM port.

| 6 | Control byte | 00..FF | | 2 | |
| 7 | | <ESC>\ | | 2 | |

4.9.10 Setting the messages on PC2 (^e).

Ports: PC2

| No | Field name | Content | Separator | Size | Remarks |
|----|--------------------------------|---------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| | Function | | | | 0 – reset the messages and stable items for presumable messages 1 – set the messages and items temporarily (until setting off) 2 – set the messages and items permanently 9 – readout the events |
| 2 | Command | ^e | | 2 | |
| | Flags of messages about events | number | / | 1-5 | Decimal number which bits determine what messages shall be sent by the printer. When the bit = 1 inform about: 0 – setting on (ENQ) 1 – starting the receipt (ENQ) 2 – receipt item (ENQ) (also package and storno) 3 – form of payment (ENQ) 4 – ending the receipt (ENQ) (also the cancelled ones) 5 – Appearance of data on PP1 port (ENQ) 6 – Sending all the data by PP1 port (empty sending queue) 7 – Change of modem entry signals of the PP1 port (ENQ) 8 – Appearance of data on PP2 port (ENQ) 9 – Sending all the data by PP2 port (empty sending queue) (ENQ) 10 – Change of modem entry signals of the PP2 port (ENQ) 11- starting the printout (not the receipt) (ENQ) 12 – ending the printout (not the receipt) (ENQ) 13 – switching of (CAN) |
| | Special items | number | / | 1 | 0 – block the PC port in 5s after finishing the receipt 1 – block the PC port in 5s after finishing a printout other than a receipt |
| 3 | Control byte | 00..FF | | 2 | |
| 6 | | <ESC>\ | | 2 | |

Remarks:

1. Presumable messages mean that all messages are set off.
2. Temporary setting is active only until the printer has been set off
3. Permanent setting is active also after the printer has been set off but it may be reset by clocking the printer
4. After receiving the message (characters ENQ or CAN), the program on PC2 should inquire the printer (9^e function) of what tasks exactly took place. New messages cannot come in that time until final reading out the information about events, except the information about setting off (CAN).
5. Flags of receive transmission events of ports PP1 and PP2 will not be reset until receiving/ cancelling this data by the PC2 port or by setting the printer off.
6. After setting of, the non-received information about messages is reset.
7. The PC2 application, after its restart shall receive the information about messages as soon as possible to allow sending new messages, as it might have omitted the earlier ones and, thus, block sending further messages.
8. Blocking the PC port for 5s is possible only when activity is found on PC2 port – i.e. the PC2 application has to inquire about statuses, cash information or event flags. Lack of activity for 3 following receipts would cause that PC port blockages would not appear despite the settings of special items.

Information about events – response to function 9:

| No | Field name | Content | Separator | Size | Remarks |
|----|--------------------------------|---------|-----------|------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | ^e | | 2 | |
| | Flags of messages about events | number | / | 1-5 | Decimal number which bits determine what messages shall be sent by the printer since the last messages readout (of that packet). When the bit = 1 inform about: 0 – setting on (ENQ) 1 – starting the receipt (ENQ) 2 – receipt item (ENQ) (also package and storno (reversal)) 3 – form of payment (ENQ) 4 – ending the receipt (ENQ) (also the cancelled ones) 5 – Appearance of data on PP1 port (ENQ) 6 – Sending all the data by PP2 port (empty sending queue) 7 – Change of modem entry signals of the PP1 port (ENQ) 8 – Appearance of data on PP2 port (ENQ) 9 – Sending all the data by PP2 port (empty sending queue) (ENQ) 10 – Change of modem entry signals of the PP2 port (ENQ) 11- starting the printout (not the receipt) (ENQ) 12 – ending the printout (not the receipt) (ENQ) 13 – switching off (CAN) |
| | Special items | number | / | 1 | 0 – block the PC port in 5s after finishing the receipt 1 – block the PC port in 5s after finishing a printout other than a receipt |
| 3 | Control byte | 00..FF | | 2 | |
| 4 | | <ESC>\ | | 2 | |

Remarks:

1. After receiving this packet of responses, response flags are reset (with two exceptions – see p. 2) and new messages may be sent.

2. Flags of receive transmission events of PP1 and PP2 ports will not be reset until the receive/cancellation of this data by the PC2 port or setting off the printer.

4.9.11. Controlling PC2 application from the PC and receiving the status (^s).

Ports: PC

| No | Field name | Content | Separator | Size | Remarks |
|----|------------------------|-----------|-----------|--------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Function | Number | | ; | Commands to be sent to PC2 application: 1 – start the transaction 2 – read transaction status 3 – cancel the transaction 4 – confirmations may be printed |
| 3 | Type of transaction | number | | ; | 0 – payment 1 – loyalty |
| | Options of transaction | number | | | (not defined yet) |
| 4 | Command | ^s | | 2 | |
| 5 | Amount of transaction | number | / | 1-10 | Optional amount of transaction |
| 6 | Data of transaction | Text | <CR> | 0..128 | Optional data of transaction |
| 7 | Control byte | | | 2 | |
| 8 | | <ESC>\ | | 2 | |

Response to function 2:

| No | Field name | Content | Separator | Size | Remarks |
|----|------------------------|-----------|-----------|--------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | ^s | | 2 | |
| 3 | Transaction status | | / | 1 | 0 – unknown 1 – started (on the run) 2 – rejected 3 – cancelled 4 – successfully completed 5 – unsuccessfully completed 40 – printed for successful completion 41 – printed out for successful completion 50 – printed for unsuccessful completion 51 – printed out for unsuccessful completion |
| 4 | Options of transaction | | / | 1 | Bits set on 1 mean: 0 – transaction will require a printout (the statuses will be 4x and 5x after finishing the receipt) 1 – transaction returns the value (fields 7 and 8) 2 – transaction returns the data (field 9) |
| 5 | Type of value | number | / | 1 | 0 – none 1 – amount 2 – percentage discount 3 – amount discount |
| 6 | Transaction value | number | / | 1-10 | Optional amount of transaction |
| 7 | Transaction data | | <CR> | 0..128 | Optional data of transaction |
| 8 | Control byte | | | 2 | |
| 9 | | <ESC>\ | | 2 | |

4.9.12. Controlling the status of PC2 application and receive of orders from PC to PC2 (^r).

Ports: PC2

| No | Field name | Content | Separator | Size | Remarks |
|----|------------------------|-----------|-----------|--------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Function | | | | Commands to be sent to PC2 application 1 – read commands from PC application 2 – set status of PC2 application transaction |
| 3 | Type of transaction | | | | 0 – payment 1 – loyalty |
| 4 | Command | ^r | | 2 | |
| 5 | Transaction status | | / | 1 | 0 – unknown 1 – started (on the run) 2 – rejected 3 – cancelled 4 – successfully completed 5 – unsuccessfully completed 10 – printed 11 – printed out |
| 6 | Options of transaction | | / | 1 | Bits set on 1 mean: 0 – transaction will require a printout (the statuses are 10 and 11 after finishing the receipt) 1 – transaction returns the value (fields 7 and 8) 2 – transaction returns the data (field 9) |
| 7 | Type of value | number | / | 1 | 0 – none 1 – amount 2 – percentage discount 3 – amount discount |
| 8 | Value of transaction | number | / | 1-10 | Optional amount of transaction |
| 9 | Date transaction | | <CR> | 0..128 | Optional data of transaction |
| 10 | Control byte | | | 2 | |
| 11 | | <ESC>\ | | 2 | |

Response to function 1:

| | | | | | |
|---|------------------------|-----------|------|--------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | ^r | | 2 | |
| 3 | Function | Number | / | 1 | Commands send by PC to PC2 application: 1 – start the transaction 3 – cancel the transaction |
| 4 | Type of transaction | number | / | 1 | 0 – payment 1 – loyalty |
| 5 | Options of transaction | number | / | 1 | (not defined yet) |
| 6 | Amount of transaction | number | / | 1-10 | Optional amount of transaction |
| 7 | Data of transaction | Text | <CR> | 0..128 | Optional data of transaction |
| 8 | Control byte | | | 2 | |
| 9 | | <ESC>\ | | 2 | |

4.9.13. Readout of the header printout (^u).

Query for header printout

| | | | | | |
|---|--------------|-----------|--|---|----------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | ^u | | 2 | |
| 3 | Control byte | | | 2 | Optional field |
| 4 | | <ESC>\ | | 2 | |

Response:

| | | | | | |
|---|--------------|-----------|--|--------|---|
| 1 | | <ESC>P | | 3 | |
| 2 | Command | #U | | 2 | |
| 3 | Header | Text | | 0..450 | The header format depends on the kind of printer. The header is sent with the spaces, without controlling signs, signaling the attributes of the line (centring, bold font) |
| 4 | Control byte | | | 2 | |
| 5 | | <ESC>\ | | 2 | |

4.9.14. Collecting information about amount of printed paper (@p).

Ports: PC

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|-----------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | @p | | 2 | |
| 3 | Function | Number | / | 1 | 1 – readout of quantity 2 – resetting |
| 4 | Control byte | | | 2 | |
| 5 | | <ESC>\ | | 2 | |

Response to function 1:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|-----------------|-----------|-----------|------|-----------------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | @p | | 2 | |
| 3 | Printout length | number | / | 1-10 | Value expressed in mm |
| 4 | Control byte | | | 2 | |
| 5 | | <ESC>\ | | 2 | |

4.9.15. Printout packet stored after receipt (PC2).

Ports: PC2

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|------------|-----------|------|--|
| 7 | | <ESC>P | | 2 | |
| 8 | Mode | | | 1 | 1- start printing after receipt, 3- end printing after receipt, 4- cancel printing after receipt |
| 9 | Command | @ws | | 3 | |
| 10 | Control byte | 00..FF | | 2 | |
| 11 | | <ESC>\ | | 2 | |

For printing lines after receipt:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|---------|-----------|----------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Mode | 2 | | 1 | Print lines after receipt |
| 3 | Command | @ws | | 3 | |
| 4 | Attribute | | <CR> | variable | Line attributes (description in table below). Attributes are optional, when one is missing, basic attributes are assumed, i.e. an ordinary font of single width and height. Attributes can be combined as long as it makes sense. |
| 5 | Inscription | text | <CR> | variable | * - 64 characters for HD, wide paper, normal font, - 44 characters for HD, wide paper, enlarged font, - 44 characters for HD, narrow paper, - 42 characters for Bono Online, Deon Online, |
| 6 | Control byte | 00..FF | | 2 | |
| 7 | | <ESC>\ | | 2 | |

Warning ! The text in line of printout stored after receipt can be formatted in the same way as in case of text formatting using ECR-EFT protocol. Details at link: <https://www.gov.pl/web/rozwoj-technologie/kasy-on-line>

Line attributes:

| Attribute | Description |
|-----------|---|
| Wx | Font width, x is a multiple, e.g. W4 - quadruple |
| Hx | Font height, x is a multiple, e.g. H2 - double height |
| N | Header font |
| I | Invers (negative) |
| U | Hidden data (stars) on copy (e.g. card number) |
| E | Content printed as bar code |
| Q | Content printed as QR code |
| G | Graphic printout |

4.10. Packet of currency operating (approval 2009).

Below were described packets of currency changes, which were entered to the fiscal printers according to the Decree of the Ministry of Finance from 28th November 2008.

4.10.1. Programming currency changing (^b).

Information is recorded in the fiscal memory, there is maximum quantity of currency changes depending on device type (standard - 4 changes).

| No. | Field name | Content | Separator | Size | Remarks |
|-----|------------|-----------|-----------|------|------------------------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant | 1 | | 1 | |
| 3 | Command | ^b | | 2 | |
| 4 | Year | 00..99 | / | 2 | Two last digits of the year |
| 5 | Month | 01..12 | / | 2 | Number of month in the year |
| 6 | Day | 01..31 | / | 2 | Number of day in given month |

| | | | | | |
|----|---------------|-------------|------|--------|---|
| 7 | Hour | 0..23 | / | 2 | |
| 8 | Minute | 0..59 | / | 2 | |
| 9 | Currency name | Inscription | <CR> | 3 | Three-letters name of the currency used according to the convention of National Bank of Poland. |
| 10 | Exchange rate | Number | / | 10..13 | from: 0.00000001 to: 9999.99999999 |
| 11 | Control byte | 00..FF | | 2 | |
| 12 | | <ESC>\ | | 2 | |

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error

Remarks:

- 1: Year, month, day, hour and minute – it is the date of entering the new currency. Switching on the new currency will be done automatically.
- 2: Only last record in the fiscal memory about planned currency change is valid.
- 3: **WARNING!!** The information is recorded in the fiscal memory of device. The currency change can be executed limited quantity of times.

4.10.2. Programming of mode of printout re-calculating to currency in the receipt's footer (^b).

Information about re-calculation of currency change is recorded in the device's configuration and setting that function enables printing additional information in the receipt's summary. That information contains re-calculation of transaction value to the other currency.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|---------------|-------------|-----------|--------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Constant | 0 | ; | 1 | |
| | Printout mode | 0..3 | | 1 | 0 – no re-calculation , 1 – to the previous currency, 2 – to the next currency, 3 – to defined currency WARNING! For printout mode 3 currency name and exchange rate are taken from packet fields. Fields date and hour are ignored. |
| 3 | Command | ^b | | 2 | |
| 4 | Year | 00..99 | / | 2 | Ignored |
| 5 | Month | 01..12 | / | 2 | Ignored |
| 6 | Day | 01..31 | / | 2 | Ignored |
| 7 | Hour | 0..23 | / | 2 | Ignored |
| 8 | Minute | 0..59 | / | 2 | Ignored |
| 9 | Currency name | Inscription | <CR> | 3 | Three-letters name of the currency used according to the convention of National Bank of Poland. |
| 10 | Exchange rate | Number | / | 10..13 | from: 0.00000001 to: 9999.99999999 |
| 11 | Control byte | 00..FF | | 2 | |
| 12 | | <ESC>\ | | 2 | |

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error

4.10.3. Supporting forms of payment in currency (\$b).

Before sending ending of the receipt, there can be described fixed payment in different currencies.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------------------|-------------|-----------|-------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Action | 1..2 | ; | 1 | 1 – submitting payment method 2 – cancelling payment method |
| 3 | Type of payment | 0..10 | ; | 1 | |
| 4 | Reserved | Ignored | ; | 1 | |
| 5 | Reserved | Ignored | ; | 1 | |
| 6 | Type of value | 0..1 | ; | 1 | 0 – payment 1 – rest of payment |
| 7 | Precision of exchange rate | 0..4 | | 1 | 4 – maximum precision |
| 7 | Command | \$b | | 2 | |
| 8 | Amount | Number | / | 1..11 | Value in the current currency |
| 9 | Name | Inscription | <CR> | 0..15 | Name of currency |
| 10 | Exchange rate | Number | <CR> | 1..8 | from: 0.00000001 to: 9999.99999999 |
| 11 | Amount of currency | Number | / | 1..11 | The value is „Amount” multiply by „Exchange rate”. |
| 7 | Control byte | 00..FF | | 2 | |
| 8 | | <ESC>\ | | 2 | |

Payment type

- 0: cash,
- 1: credit,
- 2: cheque,
- 3: talon,
- 4: other,
- 5: credit,
- 6: customer account,
- 7: currency (NOVITUS protocol), Voucher („Novitus accordable” protocol)
- 8: banking transfer (NOVITUS protocol), currency („Novitus accordable” protocol)
- 9: Mobil
- 10: Voucher

Errors' codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error

4.10.4. Request about server address.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------|--------------|-----------|------|-------------------------------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | ?SERW | | 5 | |
| 3 | Type of server | Number | / | 2 | 1 – server cpd 2 – server WebApi |
| 4 | Control byte | 00..FF | | 2 | |
| 5 | | <ESC>\ | | 2 | |

Response:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|------------|--------------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | ?SERW | | 5 | |

| | | | | | |
|---|------------------|--------|----|--------|--|
| 3 | Type of server | Number | / | 2 | 1 – server cpd 2 – server WebApi |
| 4 | Server's address | Text | CR | 0..300 | When no address, returned text is „none” |
| 5 | Control byte | 00..FF | | 2 | |
| 6 | | <ESC>\ | | 2 | |

4.10.5. Servers' programming.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|--------------|-----------|---------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | @SERW | | 5 | |
| 3 | Address | text | <CR> | 0...256 | |
| 4 | Type | number | / | 2 | |
| 5 | Control byte | 00..FF | | 2 | |
| 6 | | <ESC>\ | | 2 | |

Warning:

Field Type – option is intended for service technicians and producers.

4.10.6 DNS addresses redout.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|---------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 3 | Command | ?dns | | 4 | |
| 4 | Control byte | 00..FF | | 2 | |
| 5 | | <ESC>\ | | 2 | |

Automatic sent response for format:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|------------------|---------|-----------|------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Addresses number | | ; | | Number of read addresses |
| 3 | Response code | ?dns | | | |
| 4 | Address | | <CR> | | Number of read DNS addresses equal to number of addresses from field 2. |
| 6 | | <ESC>\ | | 2 | |

4.10.7 Sequence sending back information about update status.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|---------------|-----------|------|---------|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | ?FWUPD | | 6 | |
| 3 | Control byte | 00..FF | | 2 | |

4.11. Packets concerning EFT terminal.

It concerns Point fiscal printer and newer ones.

4.11.1. Payment to EFT terminal.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|-----------------------|---------|-----------|------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | ^q | | 2 | |
| 3 | Type | | / | | 1 – new payment 0 – check status of last transaction |
| 4 | ID | | <CR> | | Sales document ID |
| 5 | Amount | | / | | Gross sales quota |
| 6 | Value | | / | | Net sales value |
| 7 | VAT | | / | | VAT value |
| 8 | Cashback | | / | | Cashback quota |
| 9 | Max cashback | | / | | Maximum cashback quota |
| 10 | Currency code | | <CR> | 3 | |
| 11 | Additional attributes | | <CR> | | |
| 12 | Control byte | 00..FF | | 2 | |
| 13 | | <ESC>\ | | 2 | |

Error codes:

1527 – transaction eft started

4.11.2. Cancelling payment to EFT terminal.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|---------|-----------|------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Parameter | 2 | | 1 | 2 – cancelling payment Warning: on terminal depends if cancelling can be processed. Transaction status should be always checked to know its result. |
| 3 | Command | ^q | | 2 | |
| 4 | Control byte | 00..FF | | 2 | |
| 5 | | <ESC>\ | | 2 | |

4.11.3. Request to execute command of terminal connection test (^eft).

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|---------|-----------|------|---------------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | ^eft | | 4 | |
| 3 | Type | | / | | 1 – connection test |
| 4 | Control byte | 00..FF | | 2 | |
| 5 | | <ESC>\ | | 2 | |

4.11.4. Check status of terminal connection (?eft).

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|-------------|-----------|------|---------------------|
| 1 | | <ESC>P | | 2 | |
| 2 | Command | ?eft | | 4 | |
| 3 | Type | | / | | 1 – connection test |
| 4 | Control byte | 00..FF | | 2 | |
| 5 | | <ESC>\ | | 2 | |

Response:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|---------------|-----------|------|--|
| 1 | | <ESC>P | | 2 | |
| 2 | Type | Number | | 1 | Sends back type from request. 1 – connection test |

| 5 | | <ESC>\ | | 2 | |

4.13.16. Example of protected memory readout implementation.

Protected memory is the place where documents issued by cash register are stored. Protected memory during existence of cash register's fiscal mode can be changed, e.g. after it is full. If sales program needs to know exactly the documents issued by cash registers, it must implement its reading. Since protected memory may contain a lot of data, reading it should be organized in incremental way. This chapter describes method of reading protected memory in incremental way.

Each document has a unique JPKID in the protected memory - it is in no way related to report number, receipt number or printout number. This is the unique ID of saved record in protected memory. Each protected memory record may consist of 3 sections. These sections are: JSON, Print Data, Metadata. Data of each protected memory starts with JPKID 1. When implementing readout, use PC2 port (in case of cash registers) or PC/PC2 (in case of fiscal printers). Cash register can send documents in stream way (fast but not accurate) and

in record way (accurate but not fast). In incremental method of reading protected memory, it is recommended to use record readout mode - and this one is described here. After reading the protected memory record, it is possible to identify the type (Daily report, fiscal receipt, canceled receipt, event, etc.). It is best to store this data in database and perform SQL queries regardless of status of data downloading from device.

Commands to read status data of cash register enable reading the following information:

- what is protected memory label (used to identify protected memory, it is usually the cash register unique number plus the next memory number for a given cash register, e.g.:

ABC0123456789.0001,ABC0123456789.0002 ... ABC0123456789.000n),

- what is maximum JPKID saved in the cash register

- query for a specific JPKID for each section separately.

1) Implementation of algorithm can be started by reading information about current protected memory and what is maximum JPKID issued by cash register. This can be done with command:

-> <ESC>P210#s9C<ESC>\

<- <ESC>P210#X0000;ZBN1901007722.0000<CR>3;0;2954;1024;FE<ESC>\

2) In the next step, you should ask about the first JPKID with JSON section, in record way it is done as follows:

-> <ESC>P0@PMI0/0/0/511/DE<ESC>\

<- <ESC>P@PMD1/64/982/0/1<CR><CR>(data ...)CR><LF><CR>AE<ESC>\

3) Then you need to ask about print section:

-> <ESC>P0@PMI1/0/1/511/DE<ESC>\

<- <ESC>P@PMD1/256/298/0/1<CR><CR>(data ...)CR><LF><CR>AD<ESC>\

4) and metadata section:

-> <ESC>P0@PMI1/0/2/511/DD<ESC>\

<- <ESC>P@PMD2/0/0/0/1<CR><CR>(data ...)CR>D8<ESC>\

Not every JPKID contains all sections (e.g. the last transmission with Metadata is empty - zero record size).

5) After trying to read all 3 sections, you can proceed to trying to read next JPKID until maximum value is reached, in accordance with what was read in point 1.

6) Please remember what JPKID was last processed so that you can start reading from this JPKID document in next session.

Comments:

- Detailed description of packet fields is discussed in protocol documentation.

- The maximum record size cannot be larger than 256 KB

- In case of RS232 communication, it is recommended to use the highest possible transmission speed (115200).

- The read data is in BASE64URL format - it must be decoded and unpacked using zlib Deflate algorithm.

- Printout section data and metadata are used internally by the printer and do not need to be read.

This description includes most important aspects of protected memory readout. If you have additional questions, please contact technical support.

4.14. Orders for printers in pharmacy version.

4.14.1. Header of "pharmacy" receipt.

| No. | Field name | Content | Separator | Size | Remarks |
|-----|---------------------|-------------|-----------|------|---|
| 1 | | <ESC>P | | 2 | |
| 2 | Number of positions | 0..30 | ; | 1..2 | |
| 3 | Number of lines | 0..3 | | 1 | Optional |
| 4 | Command | \$s | | 2 | |
| 5 | Line no 1 | Inscription | <CR> | 0.. | Number of parameters is the same like described in field no. 3 (number of lines). |
| 6 | Line no 2 | Inscription | <CR> | 0.. | |
| 7 | Line nr 3 | Inscription | <CR> | 0.. | |
| 8 | Control byte | 00..FF | | 2 | |
| 9 | | <ESC>\ | | 2 | |

Where:

Number of positions

Amount of sale positions = 0..48, if 0 then online receipt (received lines are printed currently). It doesn't concern printers VENTO and VIVO in versions 1.xx.

Number of lines

Amount of additional lines placed in the receipt's footer, after fiscal logo, to which application has access

Line no. 1...Line no. 3

Content of additional lines.

Error's codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error (wrong position number)
- 5: printer's RTC clock readout error
- 6: error of operation with fiscal memory,
- 40: error in additional header lines (e.g. too long descriptions)

or

| No. | Field name | Content | Separator | Size | Remarks |

| 12 | Charge | Number | / | 1..11 | |
| 13 | Control byte | 00..FF | | 2 | |
| 14 | | <ESC>\ | | 2 | |

Where:

Number of lines

Number of additional lines placed in the receipt footer after fiscal logo, to which application has access,
Code

Terminal number (2 digits) + cashier code (letter),

Line no.1 .. Line no.3

Additional lines,

Payment

Quota paid by customer,

Total

total amount due for the customer (sum of the "Value" fields for all items of the receipt),

Charge

the total amount that the customer must pay (sum of the "Charge" fields for all items of the receipt)

Error's codes:

- 1: not initiated printer's clock,
- 2: control byte error,
- 4: parameter error (wrong position number)
- 5: printer's RTC clock readout error
- 6: error of operation with fiscal memory,
- 23: wrong number of records (lines) of receipt,
- 24: printer buffer overflow,
- 25: wrong terminal/cashier code (wrong length or format), or wrong contents of additional lines,
- 26: quota error in „Payment“
- 27: wrong total sum in „Total“,
- 28: totalizer overflowing,
- 29: request to end (positive!) a transaction mode while it has not been yet turned on,
- 43: quota error in „Charge“,

44: the drug receipt for which the valuation was printed is missing in the receipt (the transaction cannot be completed correctly because the table of remembered drug valuations is not empty).

4.15. Drug valuation.

Sequence causes:

- Printout of drug valuation (NON-FISCAL),
- adding a given item to the table of "remembered valuations" - name and value (if a given name already appears in the table, the value stored in the table is incremented by the current amount transferred in the sequence).

| 4 | Discount group index | Number | / | 1-3 | Number from range 1..10 that describe discount group index |
| 5 | Name | Text | <CR> | 1-40 | Discount name |
| 6 | Control byte | 00-FF | | 2 | |
| 7 | | <ESC>\ | | 2 | |

Remarks:

Fields 4-5 form a data group of discount groups, such a group may appear up to 10 times in programming order, one after another (up to 10 discount groups can be programmed once).

Example of programming discount group:

2@R1/Ulga ustawowa<CR>2/Ulga regionalna<CR>3/Emeryci<CR>4/Wojsko<CR>

5.3. Ticket receipt items.

Ticket receipt item is a special type of PLU, programmed with command **@L** or **@L3**. Adding ticket items is possible after opening receipt in a standard way (there is no special type of ticket receipt). After adding ticket item, receipt automatically becomes a ticket receipt.

Adding ticket item to receipt is possible if any common PLU items haven' been added to receipt yet.

Ticket receipt can include one or more ticket items of different types as well as optionally common PLU items.

5.3.1. Ticket receipt item (@L).

| No. | Field name | Content | Separator | Size | Remarks |

Remarks:

Closing a ticket item is optional. Closing receipt or sending regular receipt item closes ticket item automatically when it is open. In case if ticket item is not open, the order returns without any action. Closing ticket item is used when there is a need to print more than one ticket item on receipt, print additional information about passenger ticket or add a QR code to the ticket.

| 9 | Command | #o | | 2 | |
| 10 | Cashier | Text | <CR> | 0-8 | |
| 11 | ECR number | Text | <CR> | | |
| 5 | Control byte | 00-FF | | 2 | |
| 6 | <ESC>\ | | | 2 | |

5.5. Read information about discounts / discounts quota.

5.5.1. Readout of programmed discounts indexes (110#s).

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|---------|-----------|------|---|
| 1 | <ESC>P | | | 2 | |
| 2 | | 110 | | 3 | Readout of programmed discount indexes. |
| 3 | Command | #s | | 2 | |
| 4 | Control byte | 00-FF | | 2 | |
| 5 | <ESC>\ | | | 2 | |

It returns list of programmed discounts indexes in format:

| No. | Field name | Content | Separator | Size | Remarks |
|-------|---------------------|--------------|-----------|------|--|
| 1 | <ESC>P | | | 2 | |
| 2 | | 110#X | | 5 | Response packet on 110#s |
| 3 | Number of discounts | 0-100 | ; | 1-3 | Number of programmed discounts • 1..100 for protocol version < 3.00 • 1..200 for protocol version ≥ 3.00 |
| 4..n* | Discount Index | 1-100 | / | 1-3 | Index of programmed discount. • 1..100 for protocol version < 3.00 • 1..200 for protocol version ≥ 3.00 |
| n+1 | Control byte | 00-FF | | 2 | |
| n+2 | <ESC>\ | | | 2 | |

* One value is returned for each programmed discount. Number of returned values is equal to number of discounts returned as "number of discounts" value" (#3).

Example:

Sent order: <ESC>P110#s9F<ESC>\
Received response: <ESC>P110#X8;1/2/3/4/5/6/7/100/B6<ESC>\

It means that fiscal printer has programmed 8 discounts with indexes 1,2,3,4,5,6,7 and 100.

5.5.2. Data readout of programmed discount groups (111#s).

| No. | Field name | Content | Separator | Size | Remarks |
|-----|------------|---------|-----------|------|---------|
| 1 | <ESC>P | | | 2 | |

| | | | | | |
|---|--------------|-------|--|---|--------------------------------------|
| 2 | | 111 | | 3 | Data readout of programmed discounts |
| 3 | Command | #s | | 2 | |
| 4 | Control byte | 00-FF | | 2 | |
| 5 | <ESC>\ | | | 2 | |

It returns data of programmed discount groups in format:

| No. | Field name | Content | Separator | Size | Remarks |
|-------|---------------------------|--------------|-----------|------|--------------------------------------|
| 1 | <ESC>P | | | 2 | |
| 2 | | 111#X | | 5 | Response packet on 111#s |
| 3 | Number of discount groups | 0-10 | ; | 1-2 | Number of programmed discount groups |
| 4..n* | Index of discount group | 1-10 | / | 1-3 | Index of programmed discount groups |
| | Name of discount group | | <CR> | | Name of programmed discount groups |
| n+1 | Control byte | 00-FF | | 2 | |
| n+2 | <ESC>\ | | | 2 | |

* For each discount group, a group of highlighted data is returned. Number of discount data groups is equal to number of programmed discount groups returned as #3.

Example:

Sent order: <ESC>P111#s9E<ESC>\
 Received response: <ESC>P111#X5;1/test group<CR>2/local discounts<CR>3/special discount<CR>4/carrier discount<CR>10/test group<CR>FA<ESC>\

It means that fiscal printer has programmed 5 discount groups:

index: 1: name: test group
 index: 2; name: local discounts
 index: 3: name: special discount
 index: 4; name: carrier discount
 index: 10; name: test group

5.5.3. Readout of discount data (112#s).

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------|---------|-----------|------|--------------------------------------|
| 1 | <ESC>P | | | 2 | |
| 2 | | 112 | ; | 3 | Readout of programmed discounts data |
| 3 | Discount index | 1-100 | | 1-3 | Discount index * |
| 4 | Command | #s | | 2 | |
| 5 | Control byte | 00-FF | | 2 | |
| 6 | <ESC>\ | | | 2 | |

* Request for unprogrammed discount index will result in error. Indexes of programmed discounts can be obtained using command **110#s**.

It returns information about discount with submitted index in format:

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------------|--------------|-----------|------|--|
| 1 | <ESC>P | | | 2 | |
| 2 | | 112#X | | 5 | Response packet on 112#s |
| 3 | Discount index | 1-100 | / | 1-3 | Discount index • 1..100 for protocol version < 3.00 • 1..200 for protocol version ≥ 3.00 |
| 4 | Discount group index | 1-10 | / | 1-2 | Discount group index, to which discount belongs • 1..10 • 0 – no group |
| 5 | Discount amount | Number | / | | Discount amount in % for protocol older |

| | | | | | |
|-------------|--------------------------|--------|------|------|---|
| | | | | | than 3.00 • for protocol 3.00 or newer one, number ended with character \$ means quota discount. Number without character \$ means % discount. |
| Disc out. 6 | Discount value (receipt) | Number | / | | Discount value (receipt) |
| 7 | Discount value (printer) | Number | / | | Discount value (printer) |
| 8 | Name | Text | <CR> | 1-20 | Discount name |
| 9 | Control byte | 00-FF | | 2 | |
| 10 | <ESC>\ | | | 2 | |

Example:

Sent order: <ESC>P112;1#s97<ESC>\

Received response: <ESC>P112#X1/1/10/6.6/6.6/Krwiodawca 10%<CR>A9<ESC>\

5.5.4. Readout of discount values for given daily report (113#s).

| No. | Field name | Content | Separator | Size | Remarks |
|-----|---------------------|---------|-----------|------|---|
| 1 | <ESC>P | | | 2 | |
| 2 | | 113 | | 3 | Readout of discount values for given daily report |
| 3 | Command | #s | | 2 | |
| 4 | Daily report number | Number | / | 1-4 | Range from 1 to 1830 (2195) |
| 5 | Control byte | 00-FF | | 2 | |
| 6 | <ESC>\ | | | 2 | |

It returns information about discount values for given daily report: 113#X

| No. | Field name | Content | Separator | Size | Remarks |
|-----|-----------------------------|---------|-----------|------|--|
| 1 | <ESC>P | | | 2 | |
| 2 | | 113#X | | 5 | Response packet for 113#s |
| 3 | Daily report number | Number | / | 1-4 | Range from 1 to 1830(2195) |
| 4 | Date/hour of daily report | Text | <CR> | | Format: "YYYY-MM-DD HH:MM" |
| 5 | Number of active discounts | Number | / | 1-3 | |
| 6 | Discount index | 1-100 | / | 1-3 | Each field appears as many times as the value of field: Number of active discounts |
| 7 | Discount value | Number | / | | |
| 8 | Number of applied discounts | Number | / | | |
| 9 | Control byte | 00-FF | | 2 | |
| 10 | <ESC>\ | | | 2 | |

Example of discount readout:

sent order: <ESC>P113#s3/80<ESC>\

received response: <ESC>P113#X3/2017-08-02
11:23<CR>20/1/50.00/1/2/832.00/5/3/40.00/1/4/44.00/1/5/40.00/1/6/38.00/1/7/
50.00/1/8/30.00/1/9/75.00/1/10/20.00/1/11/20.00/1/12/30.00/1/13/30.00/1/14/3
0.00/1/15/160.00/1/16/160.00/1/17/160.00/1/18/120.00/1/19/160.00/1/20/160.
00/1/9C<ESC>\

Example of discount readout for not existing daily report:

sent order: <ESC>P113#s10/B2<ESC>\

received response: <ESC>P113#X0/<CR>0/BA<ESC>\

Example of discount readout for daily report not containing discounts:

sent order: <ESC>P113#s2/81<ESC>\
 received response: <ESC>P113#X2/2017-08-02 11:22<CR>0/AC<ESC>\

5.5.5. Reading control number from programmed discounts (117#s)

Interfaces: PC, PC2

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|---------|-----------|------|--|
| 1 | <ESC>P | | | 2 | |
| 2 | | 117 | | 3 | Readout of discount values for particular daily report |
| 3 | Command | #s | | 2 | |
| 4 | Control byte | 00-FF | | 2 | |
| 5 | <ESC>\ | | | 2 | |

It returns control signature from programmed discounts: 117#X

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------|--------------|-----------|------|--|
| 1 | <ESC>P | | | 2 | |
| 2 | | 117#X | | 5 | Response packet for 117#s |
| 3 | Control number | asciix | <CR> | 8 | 16 hexadecimal characters. Empty field means initialization is in progress. |
| 4 | Control byte | 00-FF | | 2 | |
| 5 | <ESC>\ | | | 2 | |

5.6. Reading information about amount of discounts of daily reports ranges (114#s, 115#s, 116#s).

5.6.1. Setting numbers range of daily reports (114#s)

114#s – setting number ranges of daily reports

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------|---------|-----------|------|-----------------------------|
| 1 | <ESC>P | | | 2 | |
| 2 | | 114 | | 3 | Setting date ranges |
| 3 | Command | #s | | 2 | |
| 4 | Initial number | Number | / | 1-4 | Range from 1 to 1830 (2195) |
| 5 | Final number | Number | / | 1-4 | Range from 1 to 1830 (2195) |
| 6 | Control byte | 00-FF | | 2 | |
| 7 | <ESC>\ | | | 2 | |

After sending the command, first report in range will be current report.
 Report will be sent after sending command **116#s**.

5.6.2. Setting date ranges of daily reports (115#s)

115#s – setting date ranges of daily reports

| No. | Field name | Content | Separator | Size | Remarks |
|-----|----------------|---------|-----------|------|----------------------|
| 1 | <ESC>P | | | 2 | |
| 2 | | 115 | | 3 | Setting date ranges |
| 3 | Command | #s | | 2 | |
| 4 | Initial number | Text | <CR> | 1-4 | Format: "YYYY-MM-DD" |
| 5 | Final number | Text | <CR> | 1-4 | Format: "YYYY-MM-DD" |
| 6 | Control byte | 00-FF | | 2 | |
| 7 | <ESC>\ | | | 2 | |

After sending the command, first report in range will be current report.
 Report will be sent after sending command **116#s**.

5.6.3. Readout of discount amounts for current daily report (116#s).

116#s – readout of discount amounts for current daily report

| No. | Field name | Content | Separator | Size | Remarks |
|-----|--------------|---------|-----------|------|--|
| 1 | <ESC>P | | | 2 | |
| 2 | | 116 | | 3 | Readout of discount amounts for current daily report |
| 3 | Command | #s | | 2 | |
| 4 | Control byte | 00-FF | | 2 | |
| 5 | <ESC>\ | | | 2 | |

It returns information about discount values for given daily report: 113#X

Command **116#s** should be repeated until receiving packet meaning end of reports:

<ESC>P113#X0/<CR>0/BA<ESC>\

6 Calculations conducted by the fiscal printer during printing the receipts.

The programmers, whose applications are to be suited to cooperation with fiscal printers, are forced to calculate by themselves the values of specified positions of receipts as well as summary values of receipts and to send them to the printer which controls these values and prints receipts only when the amounts sent by the application are equal to the ones calculated by the printer. Thus, a necessity arises to conduct calculations exactly in the same way as it is done by the printer.

Charging realization of the transaction, the printer gets the information from the system about following receipts' positions (sold articles). This information is sent in a form of sequence of data of receipt line. From the fiscal and calculation point of view, in relation to each article, the following pieces of information are important:

- name of the article,
- price per unit
- quantity
- VAT rate code,
- percentage or amount discount/ surcharge,
- item Gross value.

In fiscal printers, a control of conformability of the GROSS value is realized for a receipt line with the result of multiplication **<price> * <quantity>**. The control performs in such a way that the result of multiplication (rounded up to two positions after the point !) has to be exactly equal to the sent GROSS. In other case, error No 20 will be reported.

Name of the article is important for the printer because of control of correctness of the VAT rate (the printer possesses a database including the information about VAT rates' for commodities of specified names).

Total receipt value

$$S = s_1 + s_2 + .. + s_n$$

where:

s - receipt position value,

$1..n$ - the following positions on receipt

Receipt position value

$$s = W + r_p + r_c$$

where:

W - basic value (quantity x price),

r_p - discount/overhead on receipt position ($r_p < 0$ – discount, $r_p > 0$ – overhead)

r_c - part of discount/overhead on receipt/sub-total in PTU rate ($r_c < 0$ – discount, $r_c > 0$ – overhead) per receipt position

Value of percentage discount / overhead per position

$$r_p = W * r_{\%} \quad (\text{direct method})$$

Or

$$r_p = W * (100\% + r_{\%}) - W \quad (\text{indirect method})$$

where:

W - basic value (quantity x price),

$r_{\%}$ - percentage discount value ($r_{\%} < 0$ – discount, $r_{\%} > 0$ – overhead) with precision of 2 decimal places

Discount/Overhead to receipt, sub-total and in PTU rate

Due to tightening of fiscal regulations regarding STORNO operations, the current method of calculating discount to receipt/subtotal had to be changed. Currently, in ONLINE printers, discount to receipt/subtotal is the sum of discounts from each receipt position. Until now, it was the sum of totalizer discounts at each tax rate. Introduced changes caused breaking compatibility with previous devices.

Amount of discount / overhead to receipt / sub-total in PTU rate

$$R = r_c(1) + r_c(2) + \dots + r_c(n)$$

where:

r_c - part of discount/overhead on receipt/sub-total in PTU rate ($r_c < 0$ – discount, $r_c > 0$ – overhead) per receipt position

1..n - the following positions on receipt

Amount of discount / overhead per receipt position

$$r_c = s * r_{\%} \quad (\text{direct method})$$

where:

s – receipt position value before discount,

$r_{\%}$ - percentage discount value ($r_{\%} < 0$ – discount, $r_{\%} > 0$ – overhead)

In case of amount discount to receipt/subtotal/in PTU rate, the amount is converted to percentage value:

$$r_{\%} = 100\% \frac{r_{kw}}{s}$$

where:

r_{kw} – amount discount to receipt / sub-total in PTU rate,

S – receipt value (before discount)

Any difference $\Delta R = R - r_{kw}$ is corrected in the "penny distribution" process.

Warning:

Currently, ONLINE printers only use direct method to calculate discount to receipt/subtotal/in PTU rate.

Example 1

Example 2:

Distribution of pennies in amount discount to receipt / subtotal in PTU rate

- online printer (HDO 2.10)

Difference between value of amount discount and the resulting percentage discount is divided into subsequent receipt positions. Process begins with determining the quantum of difference k.

$k = -1$ (penny) if $\Delta R < 0$

$k = 1$ (penny) if $\Delta R > 0$

or

$k = \frac{\Delta R}{L_p}$ (total penny amount) if $\Delta R > L_p$ (penny amount to be distributed is greater than number of positions on receipt)

where:

L_p – number of positions on receipt

ΔR – difference in pennies.

Cycle (determination of k, correction of each receipt position by value of k) is performed until sum of corrections is equal to ΔR . The item is omitted if k could go negative after correction.

Calculating tax from gross amount

$$V = \frac{BR}{100\% + R}$$

where:

V - tax amount,

B - gross amount,

R - tax rate in % with precision of 2 decimal places,

Calculating tax on receipt

$$V_{sum} = \sum_{n=A}^G V_n$$

where:

V_{sum} - total value of tax on receipt,
 V_n - tax amount in rates (A,...,G) on receipt,

$$V_n = \frac{Bs_n R_n}{100\% + R_n}$$

where:

Bs_n - total value of gross sale in tax rate (n) on receipt,
 R_n - tax rate in % (A,...,G)

Calculating tax in daily report

$$Vt_{sum} = \sum_{n=A}^G Vt_n$$

where:

Vt_{sum} - total tax value since last daily report,
 Vt_n - tax value in rates (A,...,G) since last daily report,

$$Vt_n = \frac{Bt_n R_n}{100\% + R_n}$$

where:

Bt_n - total value of gross sale in tax rate (n) since last daily report,
 R_n - tax rate in % (A,...,G)

Rounding:

Fractional part from 0.005 to 0.009 => 0.01

Fractional part from 0.001 to 0.004 => 0.00

Value of returnable containers:

Values of returnable containers are not included in TOTAL amount. Their data should be sent after sending receipt line using the sequences: [Deposit operating in receipt line](#), [Deposit taken \(for container sales\)](#), [Storno of taken deposit](#), [Deposit given \(for container return\)](#) and [Storno of given deposit](#) or in [Approval transactions with payment methods \(2\)](#). Their sums should be sent in dedicated fields of sequence [Approval transactions with payment methods \(1\)](#).

7 Configuration of the printer's work – „Administration mode”.

The printer possesses, besides the standard sales mode, a mode in which it is possible to conduct a configuration of parameters of printer's work and in which diagnostic tools are available.

The access to administration menu is possible after starting the printer by pushing simultaneously a combination of Power Supply, Paper outcome and Menu buttons.

The construction of administration menu is presented below (in older versions of the printers it was slightly different). The (*) symbol means presumably set values which are advised by the manufacturer. Resetting of the printer leads to resetting configuration parameters (Administration mode) into presumable values. Only options which can be meaning for the programmers were described.

2.Configuration

2.1 Energy

2.1.1. Auto switch off

2.1.1.1 After [s]

2.1.1.2 Auto blanking

2.2. Communication

2.2.1.Communication control

Choosing the controlling of transfer in sequence communication of the printer: software-facility XONXOFF+RTS CTS or facility only RTS-CTS.

2.2.1.1 XONXOFF+RTSCTS

2.2.1.2 RTSCTS

2.2.2 Communication protocols

2.2.2.1 "NOVITUS accordable"

The first method of calculating the discount is presumable.

Released VAT rates sent back by the printer are of value = 101 and the non-used ones = 100.

The value of returnable packages is calculated as multiplication of price and quantity

2.2.2.2 NOVITUS

The second method of calculating the discount is presumable.

Released VAT rates sent back by the printer are of value = 99.99 and the non-used ones = 98.99.

The price of returnable packages is calculated as multiplication of value and quantity

2.3. Conformability

Auxiliary settings to fit to older versions of applications sending the data of additional lines. Because of limitations of new approval process it is not possible to send any possible text on the additional receipt lines. Taking into consideration programs including the name of the printer and format of the unique name, a possibility of setting the way of sending this data back by the printer was introduced.

2.3.1. Additional receipt lines

2.3.1.1. None

2.3.1.2. Constant

The printer allows two modes of reaction for receiving additional lines:

None - ignoring additional lines

Constant – constant text of additional lines saved from the first sales receipt of a the particular day. It is treated as the DECLARED text. If the printer receives an identical one in the further receipts – it will print it below the receipt. The content of DECLARED TEXT will be specified in the daily report. In case that in the further issued receipts the content of the text would not correspond with the DECLARED one, such content would be ignored and will not be printed out.

2.3.2. Source of additional line

2.3.2.1. Footer note

2.3.2.2. Header

Additional lines printed below the receipt will be taken from the received additional foot note lines (Command Beginning of transaction) or additional header lines (Commands Standard

transaction approval, Approval of transaction with forms of payment (1). , Approval of transaction with forms of payment (1) (2).).

2.3.3 Line No System P.

- 3. None
- 4. First
- 5. Second
- Third
- 6. Fourth
- 7. Fifth
- 8. Last

In receipt additional lines it is possible to send an individually modified number (the so called System No), which can be the account, the order, etc. This option determines whether the printer is to readout and print the modified system number in additional lines and determines which of the additional lines includes the system number. The line including the system No is not a part of the DECLARED TEXT, it is not printed at the daily report, It can vary for each receipt. It is printed with a „System No” description

Attention! If None (additional lines) was chosen in option 1.3.1 than independently from the setting of the described option, the system will not be printed.

2.3.4 Sent back name

- 9. VIVO (in VIVO printers) or VENTO (in VENTO printers)
- 10. WIKING
- 11. “NOVITUS accordable”

Conformability – Sent back name: Possibility of configuration the printer for applications determining the type of communication protocol after the sent facility name.

2.3.5 Sent back unique No

- XXX #####
- XXX #####
- XX #####

In order to provide compatible work with the older versions of the programs it is possible to change format of sent back unique number.

2.4 Printout

2.4.1. Printout contrast

- Low
- Normal
- High

2.4.2. Receipt buffer

- on
- off

2.5 Displaying

2.5.1. Display options

- Supply status
- Sum on in cl.

2.5.2. Reeling sensor

- on
- off

3. Functions

- 3.1. Set the clock
- 3.2. Closing
 - By dates
 - By numbers
- 3.3 RAM reset

4. Tests

- 4.1. All
- 4.2. Cyclical

5. Information

- 5.1. Version
- 5.2. Fiscal memory
- 5.3. PLU base
- 5.4. Measurements

8. Alphabetic specification of commands realized by fiscal printers.

The table below includes an alphabetic specification of commands of fiscal printers, useful while analysing controlling sequences.

| Command | Command name |
|---------|---|
| !a | Programming header in online devices (version 10 lines). |
| !d | Controlling display in out of receipt mode. |
| #a | Programming header in online devices. |
| #b | Database control |
| #c | Demand of sending back the time set in the printer |
| @c | Order of setting invoice options |
| #d | Payout from the cash register |
| #e | Setting the mode of error's service |
| #f | Printing the cash register/shift report including the form of payment (1) |
| #g | Sale receipt |
| #h | Transaction of recognition (return of goods) |
| #i | Payment to the cash register |
| #k | Printing the report of cash register/shift |
| #l | Pull out the paper |
| #m | Printing the cash register/shift report including form of payment (2) |
| #n | Demand of sending back the code of error of the last command |
| #o | Printing periodical report |
| #p | Log-in the cashier Read cashier status. |
| #q | Log-out the cashier |
| #r | Printing daily report |

| @PR | Printout from protected memory. |
| @SERW | <u>Programming servers.</u> |
| @usb | USB settings configuration. |
| @ws | Packet of printout stored on receipt. |
| @z | In advance payment. |

9. Description of interfaces.

The basic way of communication with the printer is the sequential interface RS-232. Sequential interface of the printer works as a voltage interface (according to the V.24 / RS-232C standard). Communication with the computer can also recognise equipment handshaking RTS/CTS DTR/DSR.

9.1. Description of serial interface.

Parameters of serial interface:

| PARAMETER | SIZE |
|---------------------------------|--|
| Transmission speed | *1200 bods *2400 bods *4800 bods 9600 bods *19200 bods *38400 bods *57600 bods *115200 bods |
| Quantity of information bits | 8 |
| Parity | none, |
| Quantity of STOP bits | 1 |
| Receiver communication protocol | RTS/CTS, XON-XOFF, *none |
| Sender communication protocol | none |

Attention:

(*) Parameters placed in QUARTO / Delio printers and more recent ones.

Be aware that the last parameter in the above line shall be interpreted so that the computer has no possibility of stopping the data transmission through the printer. It is important that according to the¹ V.24 norm, the maximal length of the link must not exceed 15 meters (at transfer speed 9600 bods).

Serial interface signals:

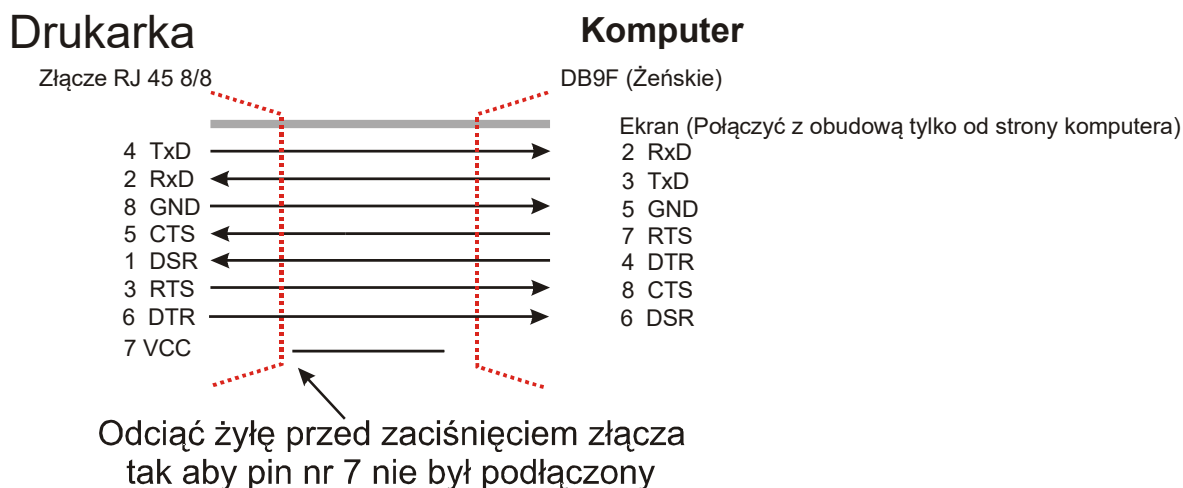

| PIN | NAME | TYPE | DESCRIPTION |
|-----|----------|------|---|
| 1 | DSR | We | Modem signal – equipment handshake |
| 2 | SIN | Wy | Exit of sequence data |
| 3 | RTS1 | Wy | Modem signal – equipment handshake |
| 4 | SOUT | We | Entry of sequence data |
| 5 | CTS | We | Modem signal – equipment handshake |
| 6 | DTR/SZUF | Wy | The readiness to control active drawers |
| 7 | VCC | - | External electrical facilities power supply +5V |
| 8 | GND | - | Signal mass |

9.2. Connecting cable for protocol XON/XOFF and RTS/CTS.

Figure description:

Przewód komunikacji – communication cable; drukarka – printer; Złącze – joint; Żeńskie – female; Ekran – screen; połączyć z obudową tylko od strony... – connect with the frame only from the side...; Odciąć żyłę przed zaciśnięciem złącza tak aby pin nr 7 nie był podłączony – cut the strand prior to fastening the joint so that pin No 7 was not joined

Przewód komunikacji Xon-Xoff i RTS-CTS.

9.3. Sequence of exits of plug RJ45 8/8 for linking external facilities.

All conduits used for linking external facilities on the side of the drawer are ended with an electric-telephone plug RJ45 8/8. Deployment of its pins is shown on the figure below.:

Figure description:

zatrzask – fitting; kabel – cable; miejsce wprowadzenia – point of entrance; przód – front; góra – top

9.4. Printer – active drawer connection.

The printer possesses the possibility of joining a drawer for cash. Only an „active drawer” can be joined to the printer with a separate power supply of the lock. To control an „active drawer” one should link it to the socket of sequential port. The drawer is controlled by negative voltage (-12V) of the DTR signal. Because of the fact that the drawer possesses only one interface socket, to make it possible to control the and the drawer, it is necessary to apply a socket splitter (from 1 to 2, signals 1:1).

| PIN in the printer PIN in RJ 8/8 | SIGNAL | DESCRIPTION |
|-------------------------------------|----------|---|
| 6 | DTR/SZUF | Signal activating the opening of the socket |
| 8 | GND | Signal mass |

10. Errors.

The following errors can appear during the work of the printer:

| Code | Description |
|------|--|
| 1 | RTC clock not initiated |
| 2 | Wrong control byte |
| 3 | Wrong quantity of parameters |
| 4 | Wrong parameter |
| 5 | Error on operation on RTC clock |
| 6 | Error of operation on fiscal module |
| 7 | Wrong date |
| 8 | Operation error – non-zero totalizers |
| 9 | Error of entry/ exit operation |
| 10 | Exceeded range of data |
| 11 | Wrong a quantity of VAT rates |
| 12 | Wrong header |
| 13 | The facility cannot be re-fiscalized |
| 14 | The header cannot be recorded |
| 15 | Wrong additional lines |
| 16 | Wrong name of commodity |
| 17 | Wrong quantity |
| 18 | Wrong PLU VAT rate |
| 19 | Wrong PLU price |
| 20 | Wrong PLU value |
| 21 | Receipt was not started |
| 22 | Error in storno (reversal) operation |
| 23 | Wrong quantity of receipt lines |
| 24 | Overfilling of printout buffer |
| 25 | Wrong text or cashier name |
| 26 | Wrong value of payment |
| 27 | Wrong total value |
| 28 | Overfilling sales totalizer |
| 29 | Trial to finish a non-started receipt |
| 30 | Wrong value of payment 2 |
| 31 | Overfilling of cash register status |
| 32 | Negative cash register status was replaced by a „zero” one |
| 33 | Wrong shift text |
| 34 | Wrong value or text |
| 35 | Sales totalizers are empty |
| 36 | The record already exists |
| 37 | Cancelled by the user |
| 38 | Wrong name |
| 39 | Wrong symbol of VAT rate |
| 40 | Not programmed header |

| | |
|------|---|
| 41 | Wrong cash register number |
| 42 | Wrong cashier's number |
| 43 | Wrong receipt number |
| 44 | Wrong customer's name |
| 45 | Wrong terminal |
| 46 | Wrong name of credit card |
| 47 | Wrong number of credit card |
| 48 | Wrong month of validity of credit card |
| 49 | Wrong year of validity of credit card |
| 50 | Wrong authorization code |
| 51 | Wrong amount |
| 52 | **Not empty table of pricing |
| 53 | **Value divergent with pricing |
| 54 | **Lack of pricing for medicine |
| 55 | **Lack of medicine description |
| 56 | **Error of CHARGE amount |
| 57 | **Overfilling of pricing table |
| 58 | Offline receipt full |
| 82 | Not permitted command |
| 83 | Wrong value of deposit |
| 84 | Exceeded number of sent inscriptions |
| 1000 | Initiation error |
| 1001 | RAM harm |
| 1002 | Receipt already started |
| 1003 | Lack of VAT rate identifier |
| 1004 | Wrong discount |
| 1005 | Wrong data |
| 1006 | The printer is not in a fiscal mode |
| 1007 | Non-programmed VAT rates |
| 1008 | Full fiscal memory |
| 1009 | Wrong control sum of RAM |
| 1010 | Wrong control sum of database |
| 1011 | Wrong control sum of header |
| 1012 | Wrong control sum of cashier's name |
| 1013 | Wrong control sum of cash register number |
| 1014 | Data updating failed |
| 1015 | non-programmed unique number |
| 1016 | Lack of fiscal memory |
| 1017 | Lack of printing mechanism |

| | |
|------|--|
| 1018 | Lack of display |
| 1019 | Fiscal memory was changed |
| 1020 | Identical VAT rates have already been programmed |
| 1021 | The facility is only in a readout mode |
| 1022 | Non-recognized Command |
| 1023 | Wrong Command |
| 1024 | Wrong range of report |
| 1025 | Lack of report data in the given range |
| 1026 | Overfilling of the transmission buffer |
| 1027 | Non-finished fiscal mode |
| 1028 | Harm of fiscal memory |
| 1029 | Exceeded limit of limitations in fiscal memory |
| 1030 | Harmed map of fiscal memory |
| 1031 | Command sent in a wrong mode |
| 1032 | Wrong frame indicator |
| 1033 | *Fiscal memory is busy |
| 1034 | **Fiscal printer is busy |
| 1037 | No paper |
| 1038 | Error of electronic copy record |
| 1039 | Error of memory card installation |
| 1040 | Memory card was closed |
| 1041 | Error of electronic copy verification |
| 1042 | Pocket memory full |
| 1043 | Non recorded electronic copy |
| 1044 | Error of electronic copy printout |
| 1045 | No card |
| 1046 | No data |
| 1047 | Lack of card readiness |
| 1048 | Error of card closing |
| 1049 | Error of card opening |
| 1050 | Error of id.txt file |
| 1051 | Error of no.txt file |
| 1052 | Error of files base replaying |
| 1053 | Error of memory card password |
| 1054 | No access |
| 1055 | Error of pocket memory |
| 1056 | Error of pocket memory |

*Additional numbers of errors appearing in QUARTO and DELIO PRIME fiscal printers

** Error's code appearing in pharmaceutical fiscal printers

| | |
|------|---|
| 1057 | Error of card base of electronic copy |
| 1058 | Error of files base of electronic copy |
| 1075 | Incorrect format of graphic header (e.g. too big dimensions) |
| 1076 | Header already programmed, one must delete existing header and then program a new one |
| 1087 | IO error of files system |
| 1088 | Limit of RAM memory resets has been reached |
| 9999 | Fatal error |
