

One journey,
endless possibilities
Ndevor.

Ndevor

NEWLAND SOFTWARE

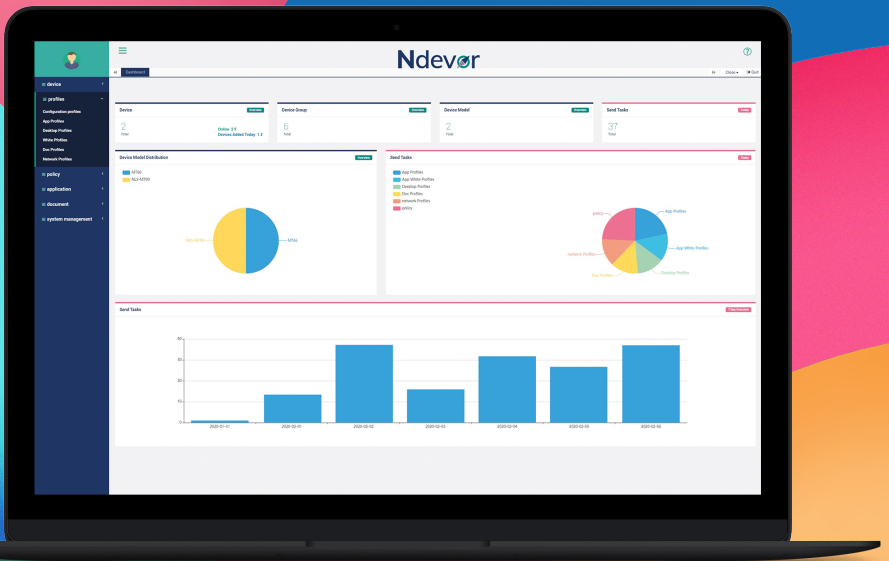

AND YOU THOUGHT DEVICE MANAGEMENT WOULD BE A CHALLENGE.

A bold management tool to look after all your devices from one central location, has arrived. That means new ways to help you improve your entire operation. Real-time device intelligence and a central management platform now makes scanning even simpler.

Ndevor is *the* management software to support your Newland device. It lets you run a wide network of mobile computers like you simply could not before. That's because it's designed for the hardware it runs on – and vice versa.

All your devices.
One seamless experience.

What makes Ndevor Ndevor?

Ndevor works with your Newland devices like no other device management software can. It brings you a variety of features to manage both individual devices and larger fleets.

ONBOARDING

Enrol devices by a simple point and scan system. QR codes link units to specific groups, defined by purpose or location.

DASHBOARD

Intuitive and powerful online tool to update firmware, build up profiles of applications and settings. Clone the settings to make changes or enrollment plain sailing.

INTELLIGENCE

Instantly get feedback on the stats of your Newland devices. See which and how many of them successfully accepted the profiles you've sent them. Monitor downtime of your devices; filter on time scales, groups or hone in on individuals.

TAKE COMMAND

Completely control a device, to solve problems or assist users from a remote location. Navigate the entire operating system from a secure log in via desktop or tablet.

SECURITY

Lock down a rogue device or routinely add an extra peace of mind to your entire fleet by setting a secure pin password. Fortify your devices by restricting access to settings, applications and websites.

USER RESTRICTION

Create a streamlined suite of applications to guide the users to access only the right programs on their devices. Whatever management levels your workforce comprises of, they always and only have access to the applications applicable to them.

RADAR

Locate the last known location by pinging a device. Google maps registers each device according to its location va GPS. The standard Ndevor package includes several location pings per month.

Compatibility

N7 Cachalot Pro & Pro II

MT37 Baiji

MT65 Beluga IV, V

MT67 Sei

MT90 Orca II, III

NQuire 750 Stingray

NQuire 1000 Manta II

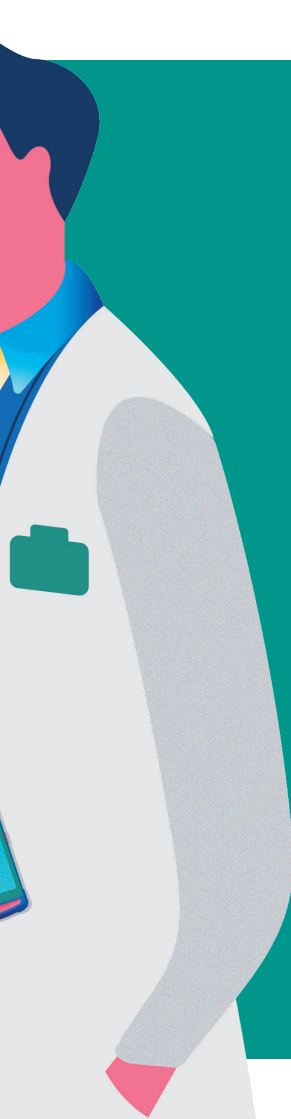

NQuire 1500 Mobula

WD1 Watch Scanner

Sometimes the best things in life are free.

NDEVOR HAS BEEN DEVELOPED BY NEWLAND AND FOR NEWLAND.

Ndevor is a complementary device management software, designed to support our hardware. The Newland tool helps steer your hardware through its life cycle, from install to upgrade, through maintenance and then seamless migration onto the next generation of devices.

Launched on Android 8, Ndevor will continue to develop in time for our Android 9, 10 and other future releases.
